ASSIGNMENT 05
BANK LOAN APPLICATION AUTOMATION SUITE
WORKFLOW OPTIONS USE CASE

Zoho Creator | Workflow Configuration and Automation

1. Objective

To design a complete automation layer in Zoho Creator for the Bank Loan Application application, demonstrating all eight workflow options: Form Workflows, Schedules, Approvals, Payments, Blueprints, Batch Workflows, Report Workflows, and Functions.

2. Problem Statement

Application acknowledgements, pending-document reminders, high-value loan approvals, disbursal, EMI reminders, and EMI recalculation may require manual effort. This automation suite aims to reduce delay and inconsistency while maintaining controlled and auditable loan processing.

3. Scope of the Use Case

- Application Name: Loan Application & Pre-Screening Management
- Base Form/Report: Loan_Application_Form and Loan_Application_Report
- Primary Users: Applicants, Loan Officers, Credit Committee, Finance/Disbursal Team
- Deliverable: Eight automations covering the loan lifecycle
- Objective: Reduce manual work, enforce approval controls, and provide timely communication

4. Workflow Options Used and Their Mapping

Workflow Option	Workflow Name	Purpose	Trigger / Frequency
Form Workflows	On_Application_Submit_Workflow	Acknowledgement to applicant and notification to assigned officer	On successful form submission
Schedules	Daily_Pending_Document_Reminder_Schedule	Remind applicants with incomplete KYC or income proof	Daily at 10:00 AM
Approvals	HighValue_Loan_Approval	Route high-value loan applications to the credit committee	When requested amount exceeds configured threshold
Payments	Loan_Disbursal_Payment_Workflow	Initiate disbursal after approval and update status	When Status changes to Approved
Blueprints	Loan_Lifecycle_Blueprint	Enforce controlled lifecycle stages and role-based transitions	Submitted → Document Verification → Credit Check → Approved → Disbursed/Rejected
Batch Workflows	Bulk_EMI_Reminder_Batch	Send EMI reminders to active borrowers due within three days	Daily at 7:00 AM; batches of 200
Report Workflows	OnEdit_Recalculate_EMI_Workflow	Recalculate estimated EMI when amount or rate changes	Edit of specified fields in report
Functions	Generate_Sanction_Letter_Function	Generate and email sanction letter PDF using reusable Deluge logic	After approval or manual resend

5.1 Form Workflows — On_Application_Submit_Workflow

- Runs when a new record is added to Loan_Application_Form.
- Sends an acknowledgement with the Loan Application ID and expected processing timeline.
- Notifies the assigned loan officer for triage.

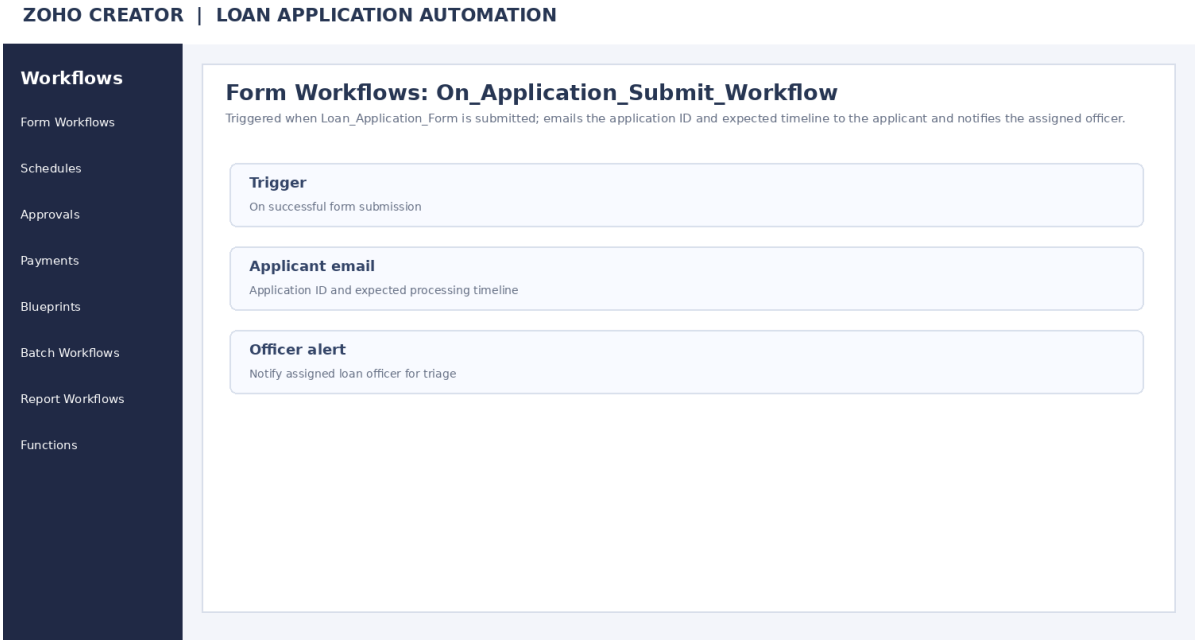

Figure 1: Form workflow acknowledgement and officer notification

5.2 Schedules — Daily_Pending_Document_Reminder_Schedule

- Runs daily at 10:00 AM and checks whether KYC or income-proof documents are incomplete.
- Sends reminders only while required documents remain pending.
- Caps reminders at five per application before escalating to manual follow-up.

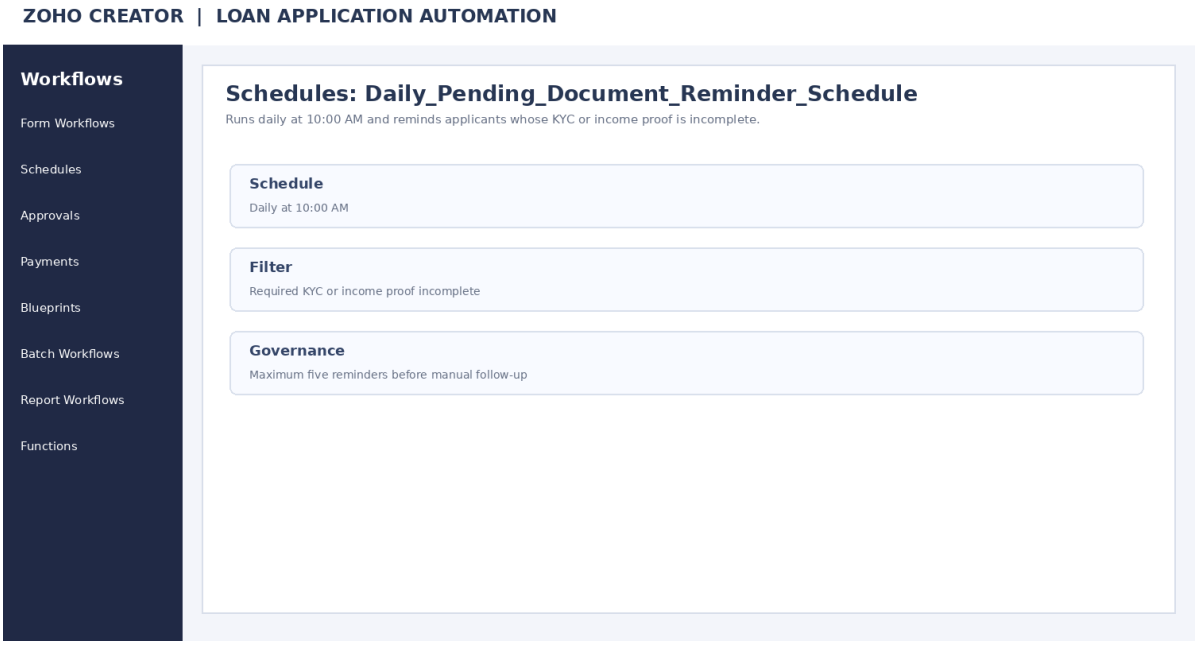

Figure 2: Daily pending-document reminder schedule

5.3 Approvals — HighValue_Loan_Approval

- Routes applications exceeding the configured loan amount threshold to the credit committee.
- Keeps the record at Pending Committee Approval until approved or rejected.
- Uses a multi-member approver group and minimum quorum.

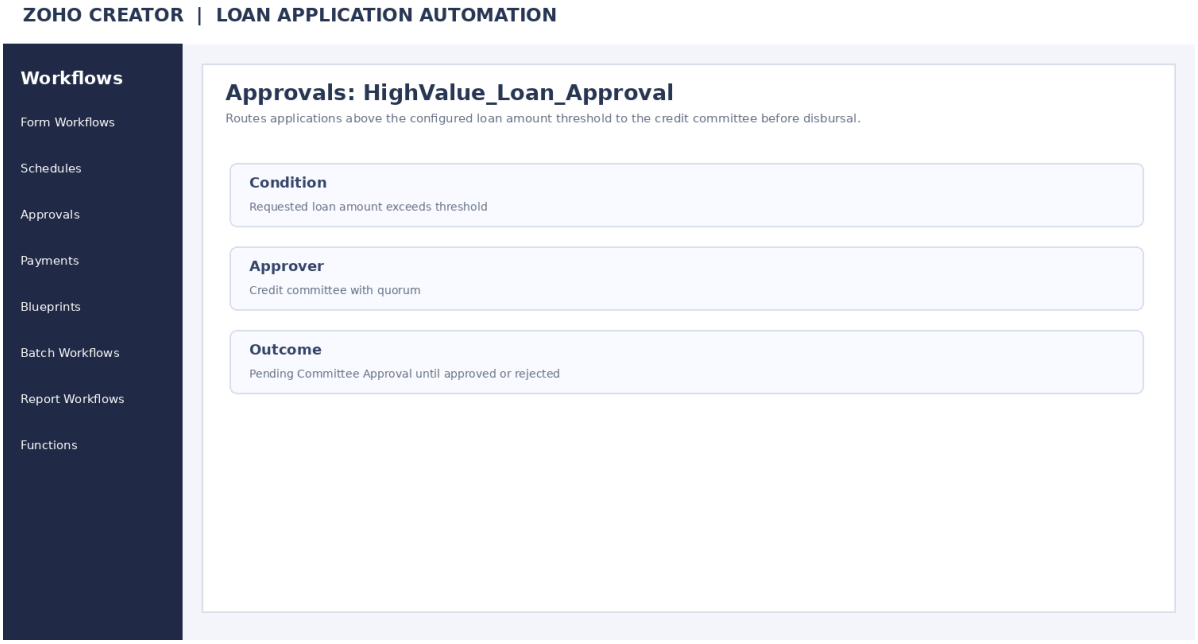

Figure 3: High-value loan approval routing

5.4 Payments — Loan_Disbursal_Payment_Workflow

- Starts disbursal through a configured bank-transfer connector after final approval.
- On success, updates Disbursal_Status to Disbursed and stores the transaction reference.
- On failure, retries status checking up to three times and alerts finance.

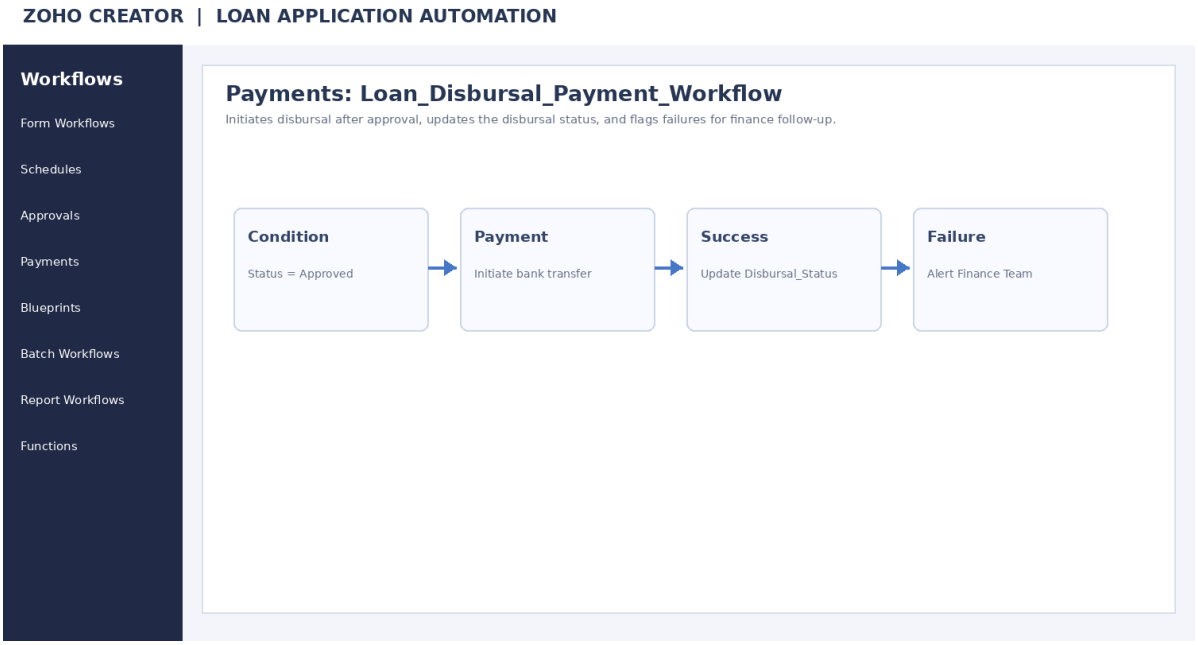

Figure 4: Disbursal payment workflow with success and failure paths

5.5 Blueprints — Loan_Lifecycle_Blueprint

- Uses Submitted, Document Verification, Credit Check, Approved, and Disbursed or Rejected stages.
- Restricts transitions by role so mandatory checks cannot be skipped.
- Requires a comment for each transition to maintain an audit trail.

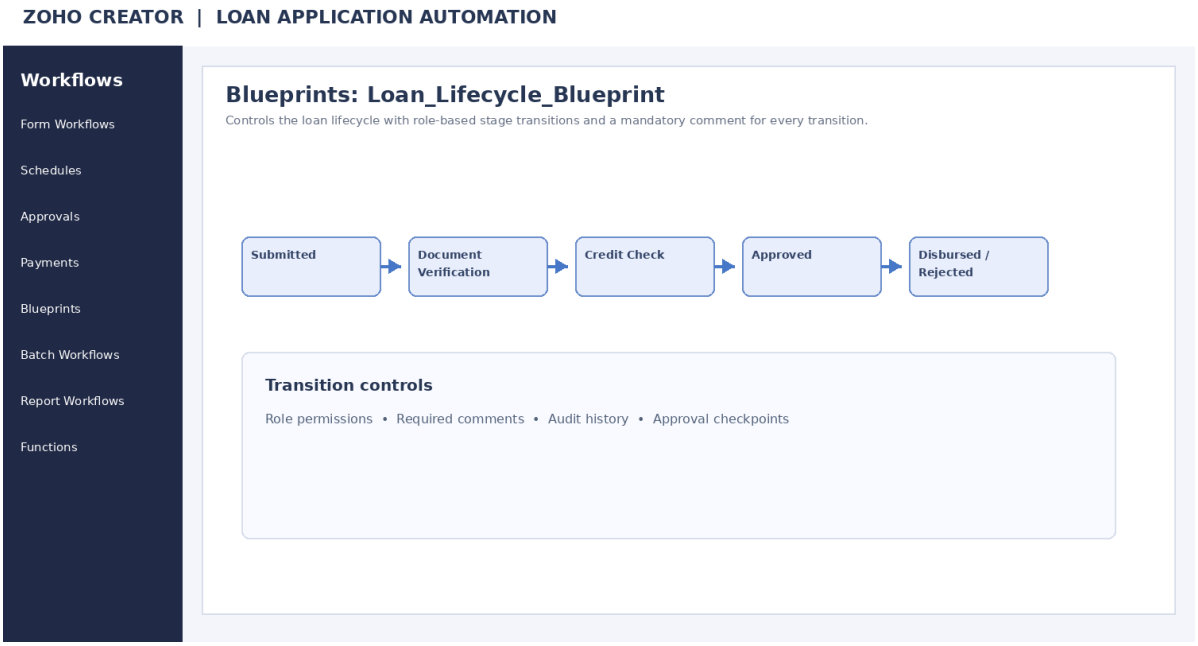

Figure 5: Loan lifecycle blueprint and transition controls

5.6 Batch Workflows — Bulk_EMI_Reminder_Batch

- Runs daily at 7:00 AM to identify active borrowers whose EMI is due within three days.
- Sends reminders containing the due amount.
- Processes records in batches of 200.

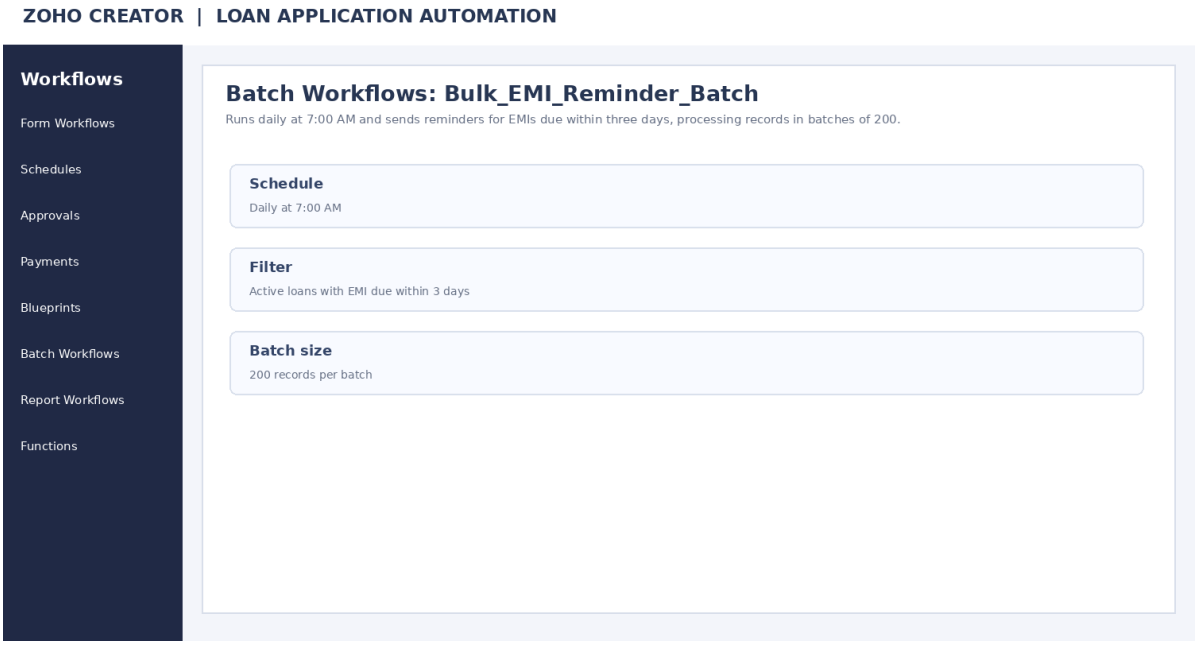

Figure 6: Batch EMI reminder workflow

5.7 Report Workflows — OnEdit_Recalculate_EMI_Workflow

- Triggers when Loan Amount Requested or Interest Rate Offered changes in Loan_Application_Report.
- Recalculates Estimated_Monthly_EMI without requiring form resubmission.
- Does not recalculate for unrelated edits.

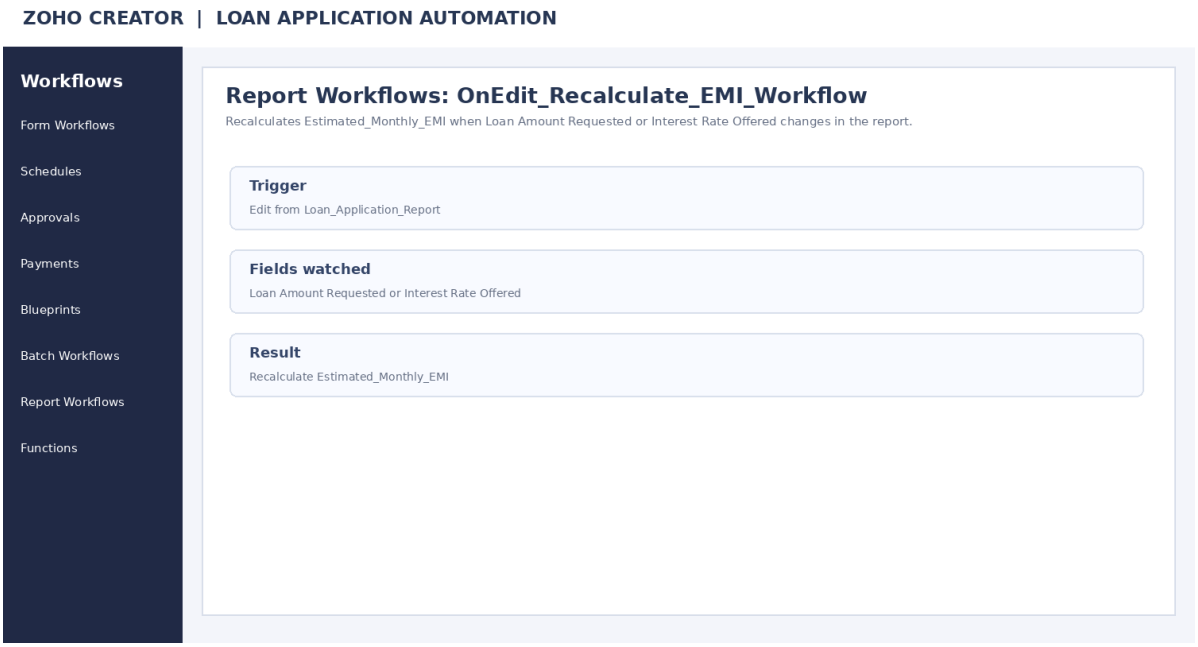

Figure 7: Report edit EMI recalculation workflow

5.8 Functions — Generate_Sanction_Letter_Function

- Generates a sanction letter PDF containing approved amount, tenure, and EMI schedule.
- Emails the letter after approval.
- Can also be called from a Resend Sanction Letter button, schedule, or another workflow.

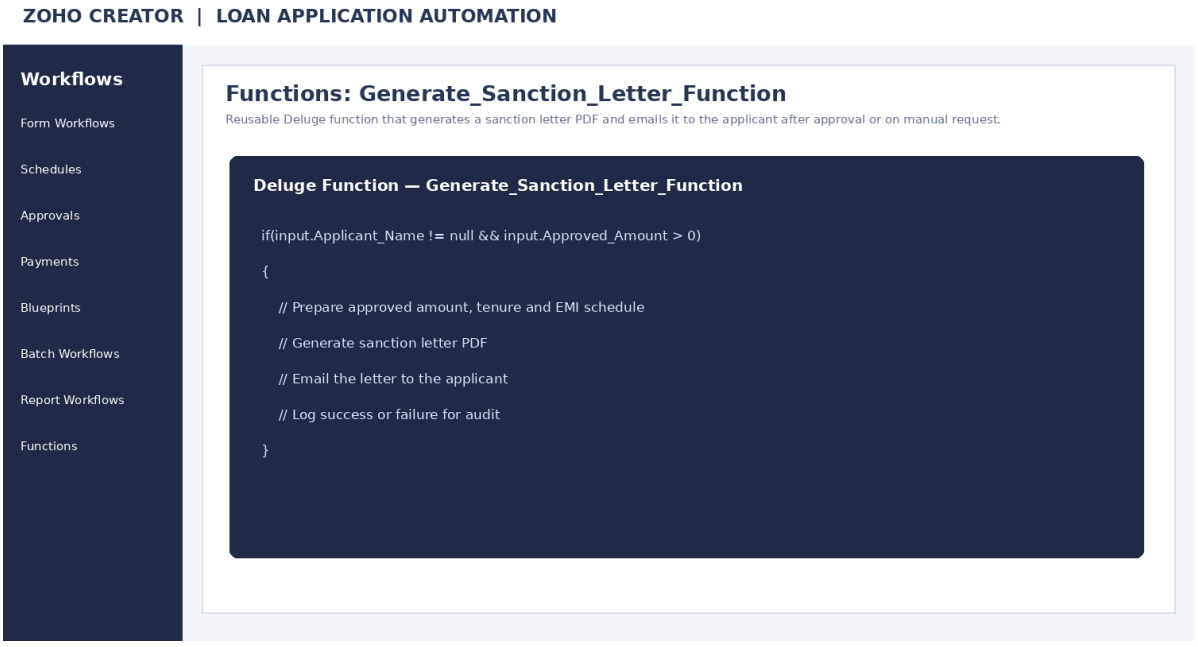

Figure 8: Reusable sanction-letter function

6. Configuration and Governance Rules

- Form workflow: log invalid applicant-email errors without blocking submission.

- Schedule: limit reminders to five per application before manual follow-up.
- Approvals: use a multi-member credit committee and minimum quorum.
- Payments: retry the disbursal status callback up to three times before flagging failure.
- Blueprint: require a comment for every stage transition.
- Batch workflow: default batch size of 200 records.
- Report workflow: run only when Loan Amount Requested or Interest Rate Offered changes.
- Function: validate Applicant Name and Approved Amount before generating the sanction letter.

7. Workflow Summary (End-to-End)

- Applicant submits Loan_Application_Form; the form workflow sends an acknowledgement.
- The daily schedule follows up on missing documents.
- High-value applications are routed to the credit committee.
- The Blueprint controls verification, credit check, approval, and disbursal/rejection stages.
- Report edits to loan amount or interest rate trigger EMI recalculation.
- Approved loans trigger the disbursal payment workflow.
- The sanction-letter function generates and emails the formal letter.
- Active borrowers receive EMI reminders through the daily batch workflow.

8. Expected Learning Outcomes

- Understand all eight Zoho Creator Workflow options and their use cases.
- Differentiate event-driven workflows from time-driven schedules.
- Combine Blueprints with approval checkpoints for controlled processing.
- Use batch workflows for large record volumes.
- Create reusable Deluge functions callable from multiple workflows.
- Apply governance controls to payments, reminders, and financial actions.

9. Deliverable and Result

This report documents the proposed eight-workflow automation suite for Loan_Application_Form and Loan_Application_Report, including triggers, purposes, governance rules, and the end-to-end lifecycle. To complete the practical exercise, configure the workflows in Zoho Creator and capture actual screenshots of each workflow configuration, the Blueprint diagram, a sample acknowledgement and disbursal event, and the Deluge function being called from at least two workflow types.

Note: Figures are generated illustrative mockups, not screenshots from a live Zoho Creator account. Payment execution requires a configured and verified payment/bank-transfer connector.
