LAB EXERCISE: 08

CONFIGURATION OF APPOINTMENT VALIDATION, EMAIL AND REMINDER AUTOMATION

Objective

To study how Zoho Creator workflows can validate appointment dates, send confirmation emails after submission and support automated patient reminders through Deluge.

Procedure

1. Access the existing Hospital Management System in Zoho Creator and open the Appointment form settings.
2. Add a workflow that runs when an appointment is created or updated.
3. Configure a date-checking condition so that dates earlier than the current date are rejected with an alert.
4. Save the validation action and confirm that it appears in the list of form workflows.
5. Set up a second workflow that runs after a successful appointment submission.
6. Choose the Send Email action and enter the recipient, email subject and appointment confirmation content.
7. Save the email notification configuration.
8. Add a reminder workflow and open its Deluge editor to enter the reminder logic and required conditions.
9. Check the script fields, save the workflow and inspect the completed workflow list.

Workflow Configuration and Screenshots

The following figures are included as reference screenshots from the supplied exercise. The account details visible inside those screenshots remain as shown in the source document.

Checking Appointment Dates

The validation workflow runs when an appointment form is created or modified. It compares the chosen appointment date with the current date. A past date triggers a validation alert and stops the record from being accepted.

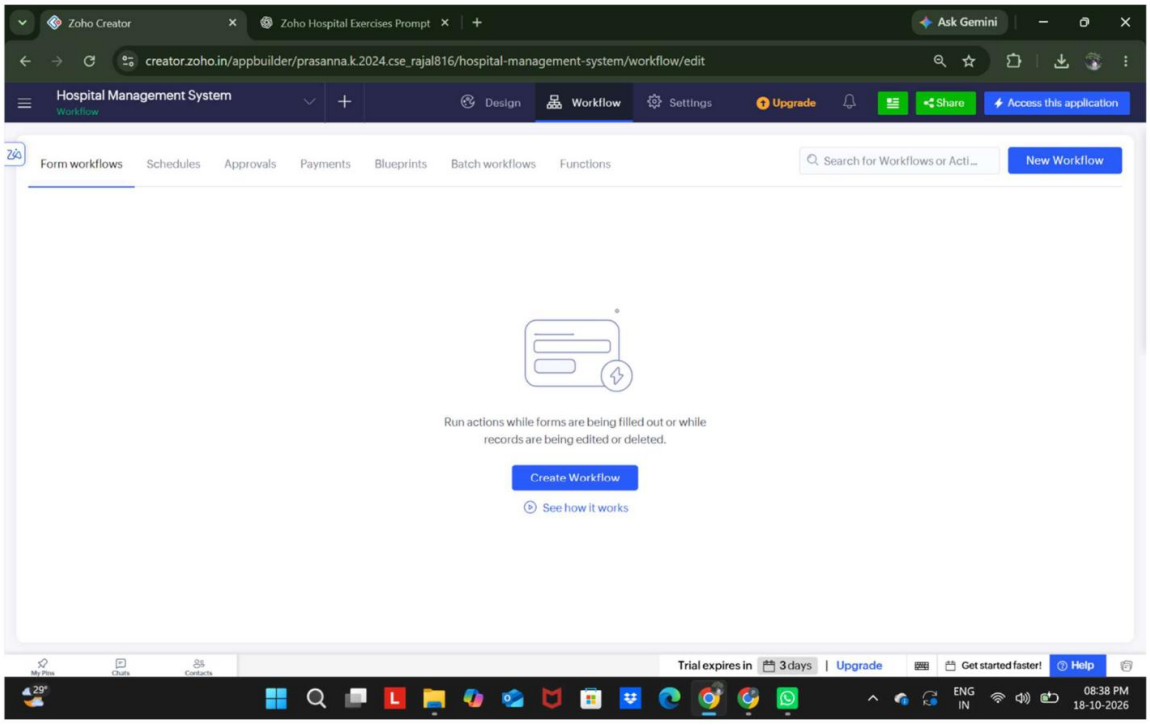

Figure 1: Creating the appointment date validation workflow.

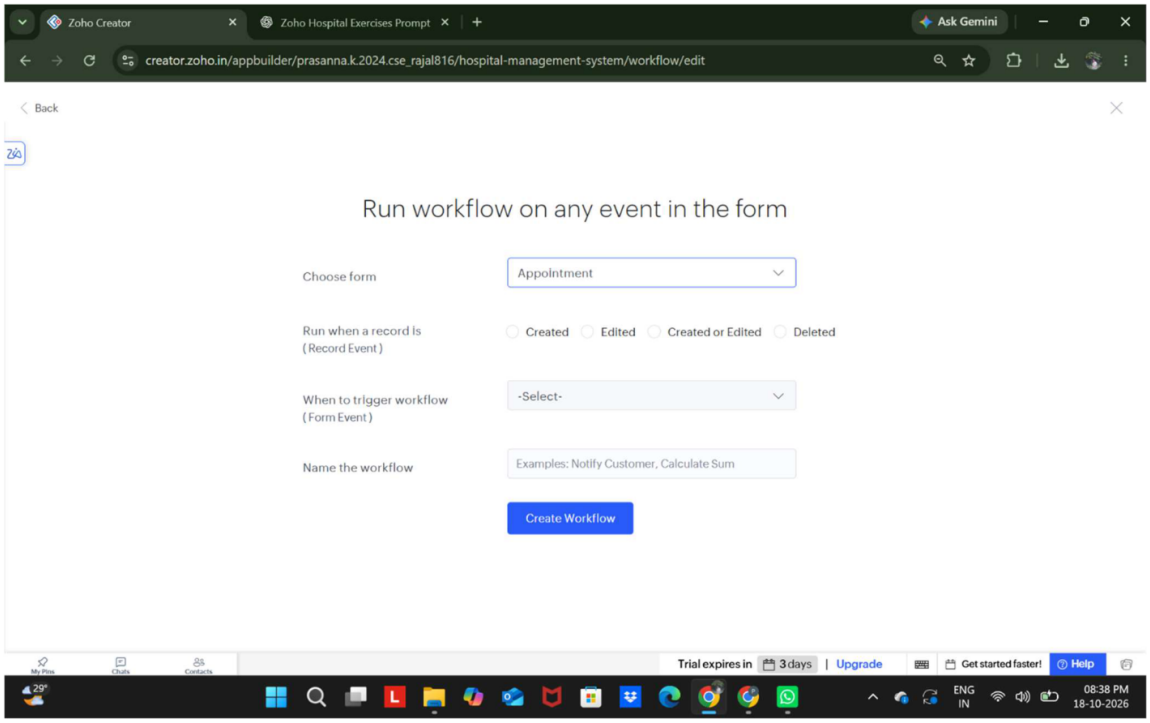

Figure 2: Selecting the Appointment form.

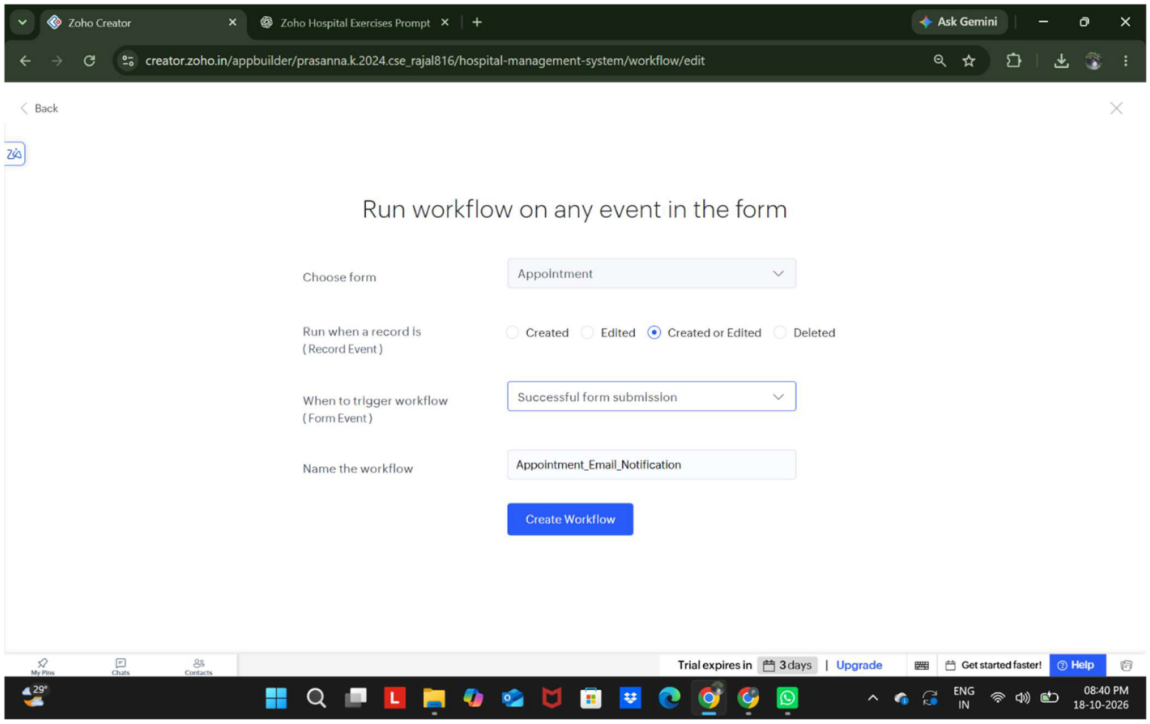

Figure 3: Setting the workflow trigger.

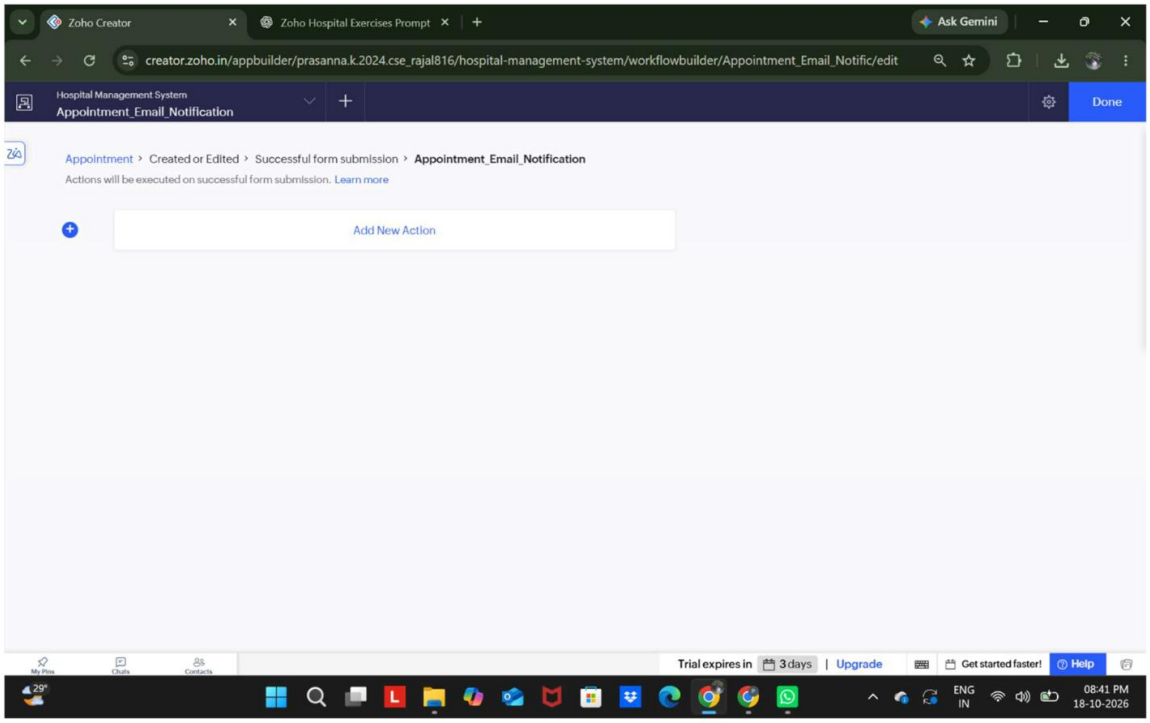

Figure 4: Entering a name for the validation workflow.

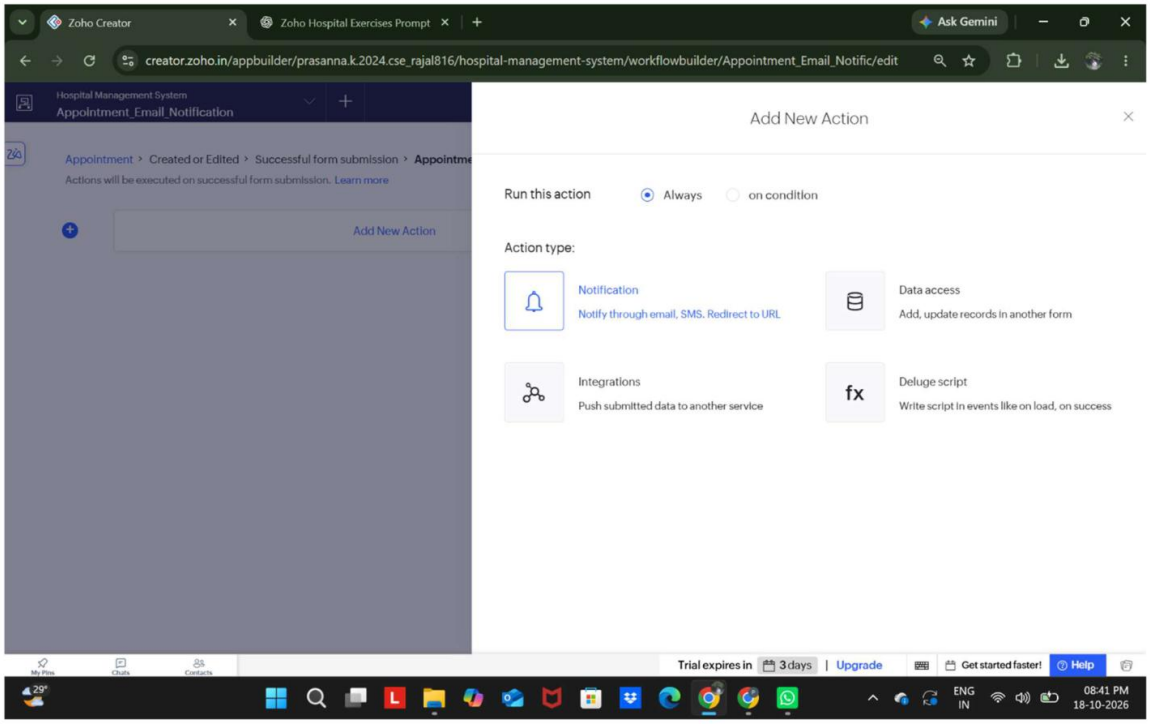

Figure 5: Adding an action to the validation workflow.

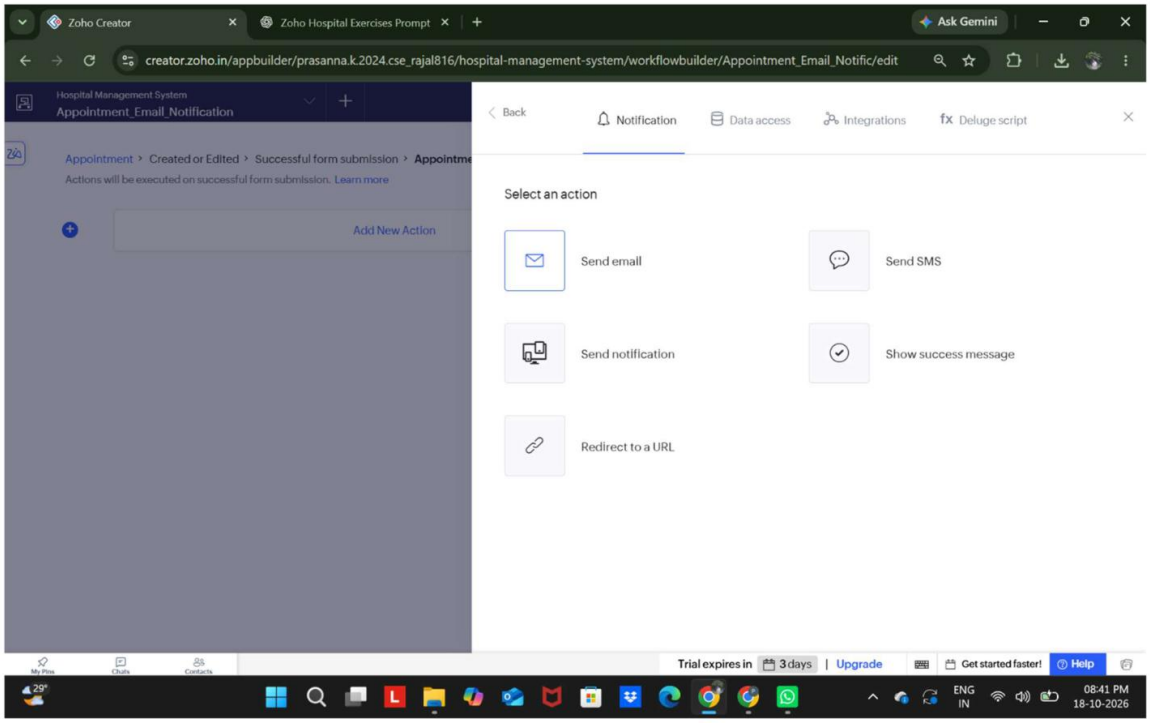

Figure 6: Reviewing the form workflow list.

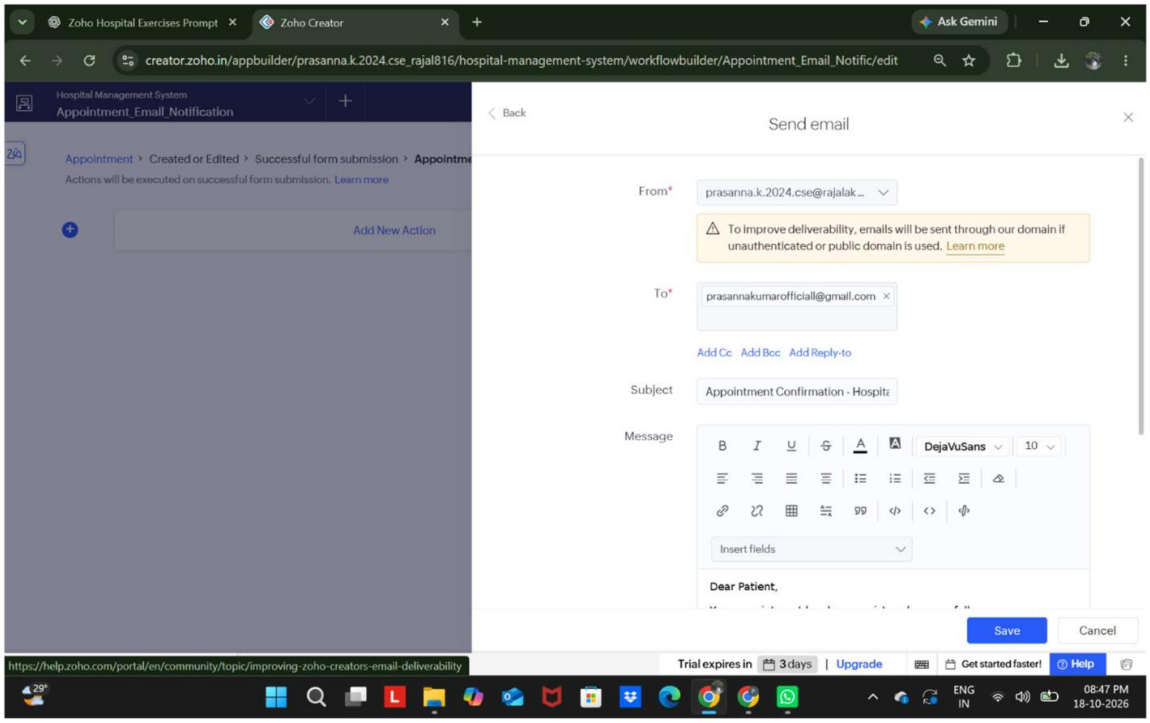

Figure 8: Writing the appointment date validation script.

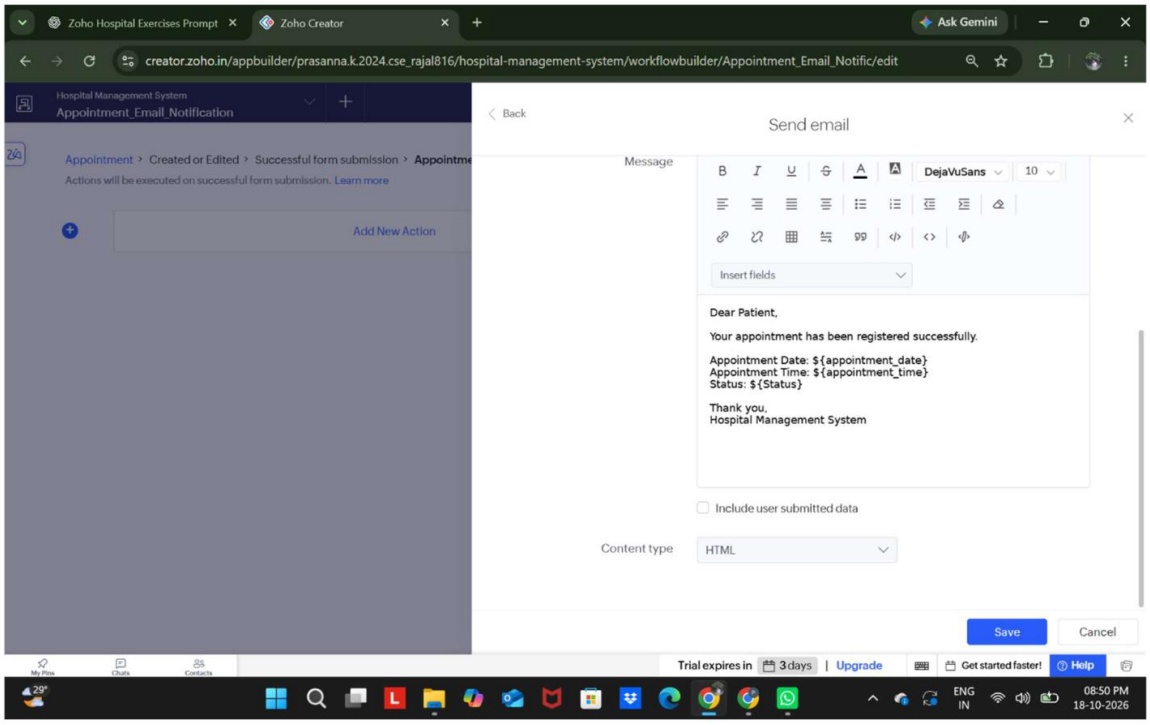

Figure 9: Checking the date validation condition.

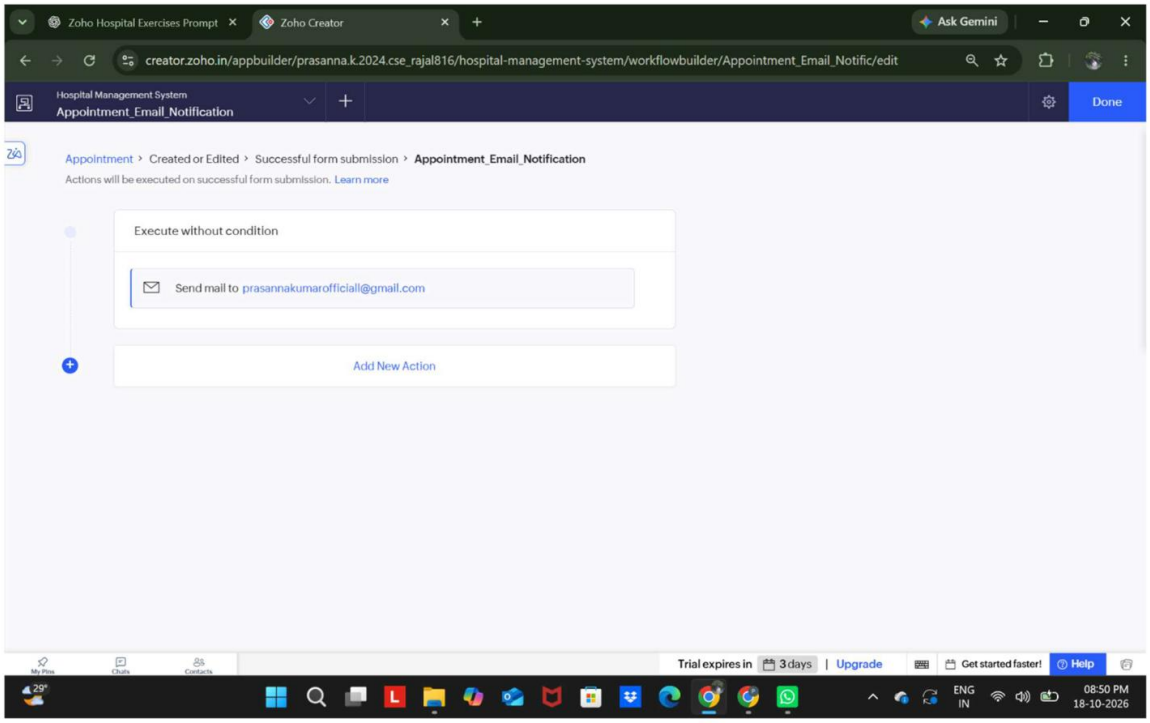

Figure 10: Configuring the validation alert.

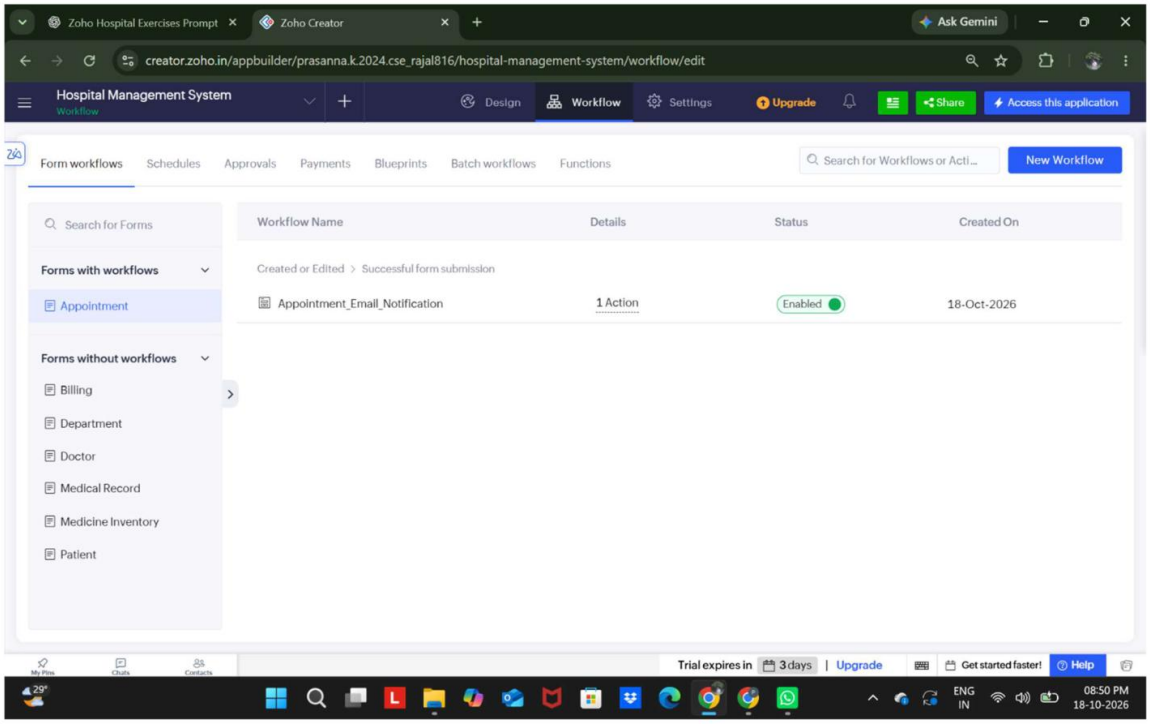

Figure 11: Saving the validation workflow.

Sending an Appointment Confirmation Email

The email notification is configured to run after an appointment has been submitted successfully. A Send Email action is used to provide the patient with confirmation details, including relevant scheduling information.

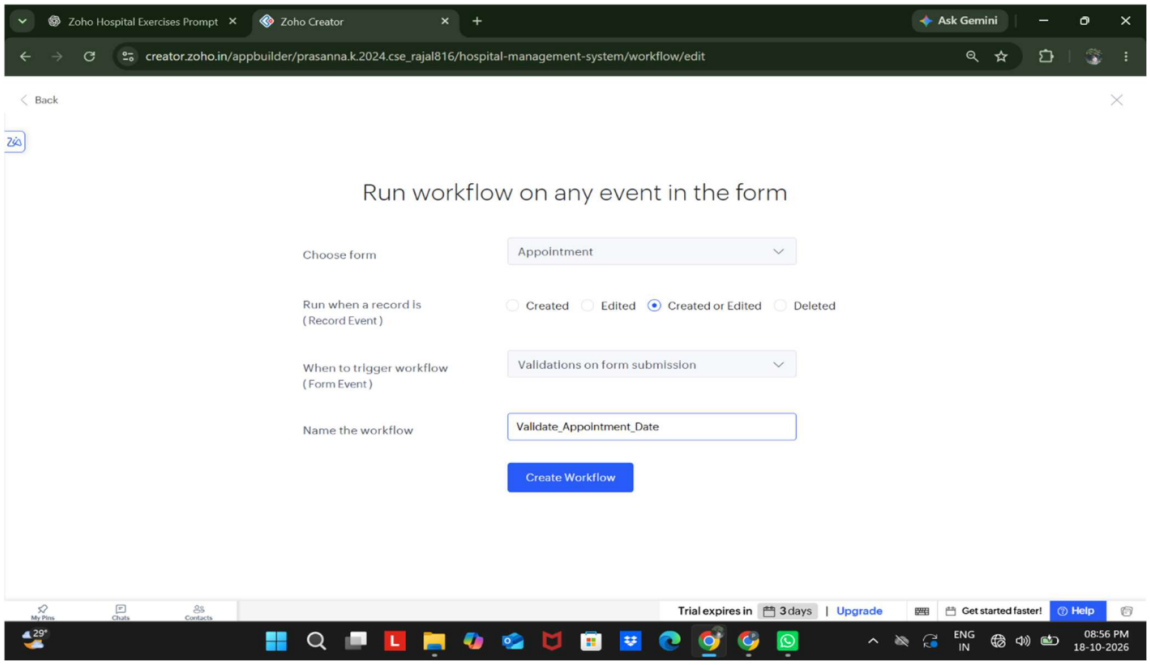

Figure 13: Reviewing the email notification workflow.

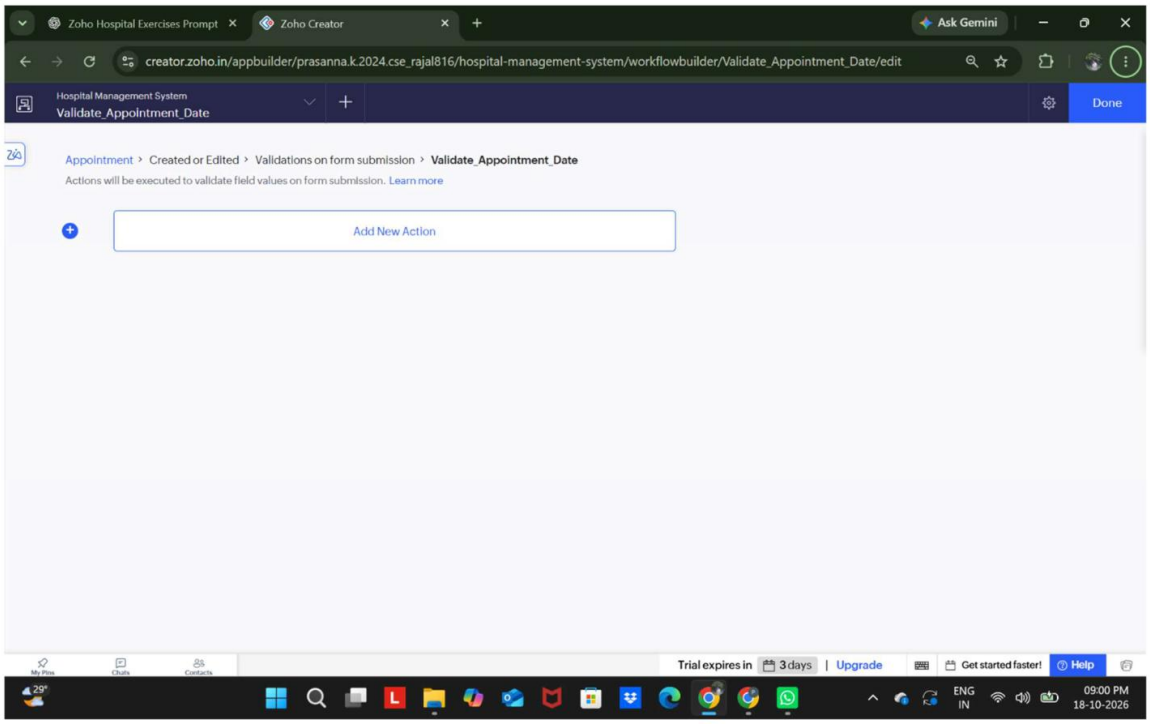

Figure 14: Adding the email notification action.

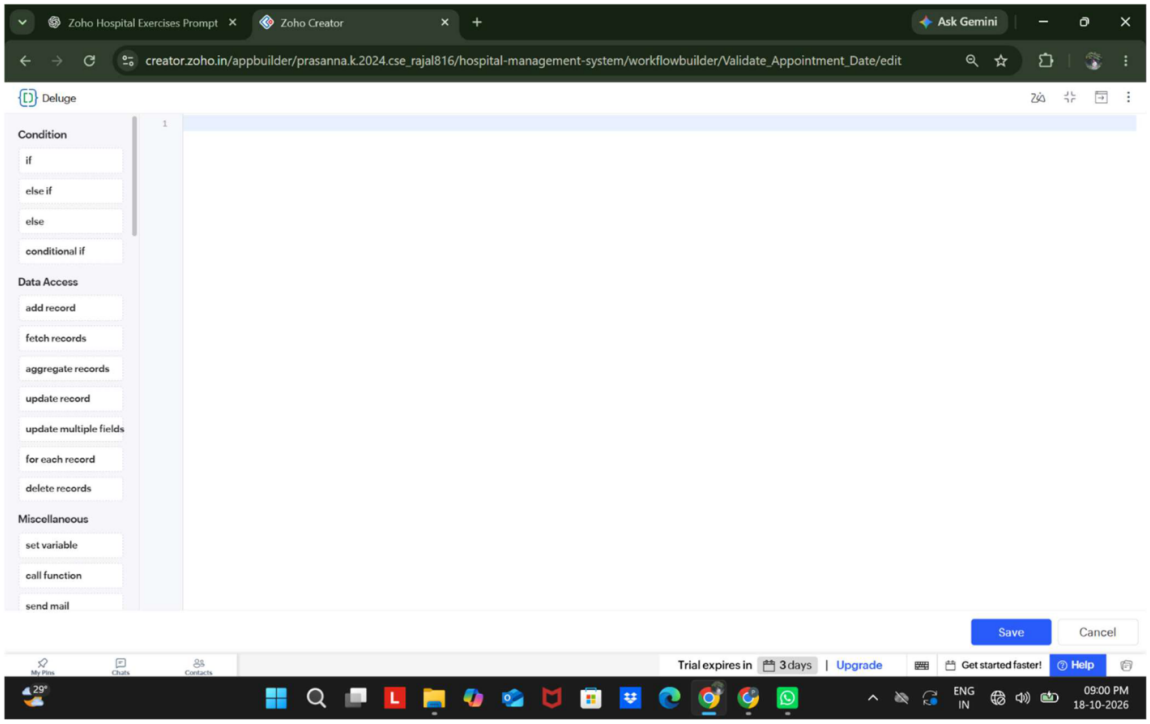

Figure 15: Opening the Send Email configuration.

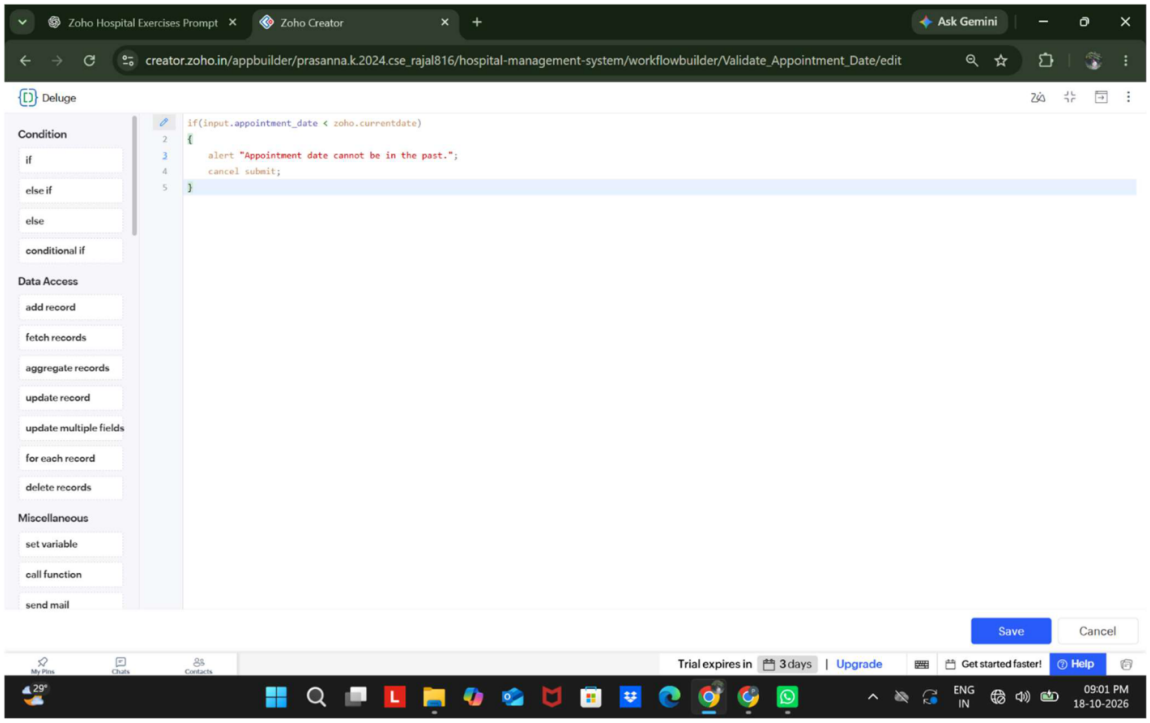

Figure 16: Setting the email recipient and subject.

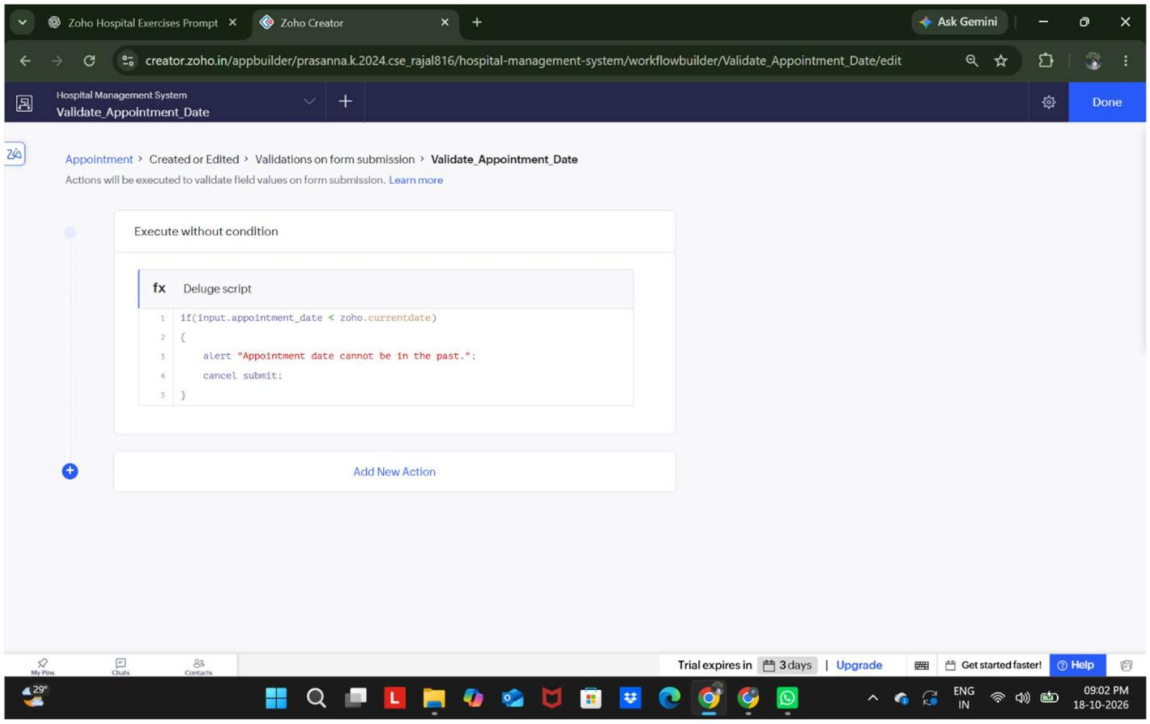

Figure 17: Entering the appointment confirmation message.

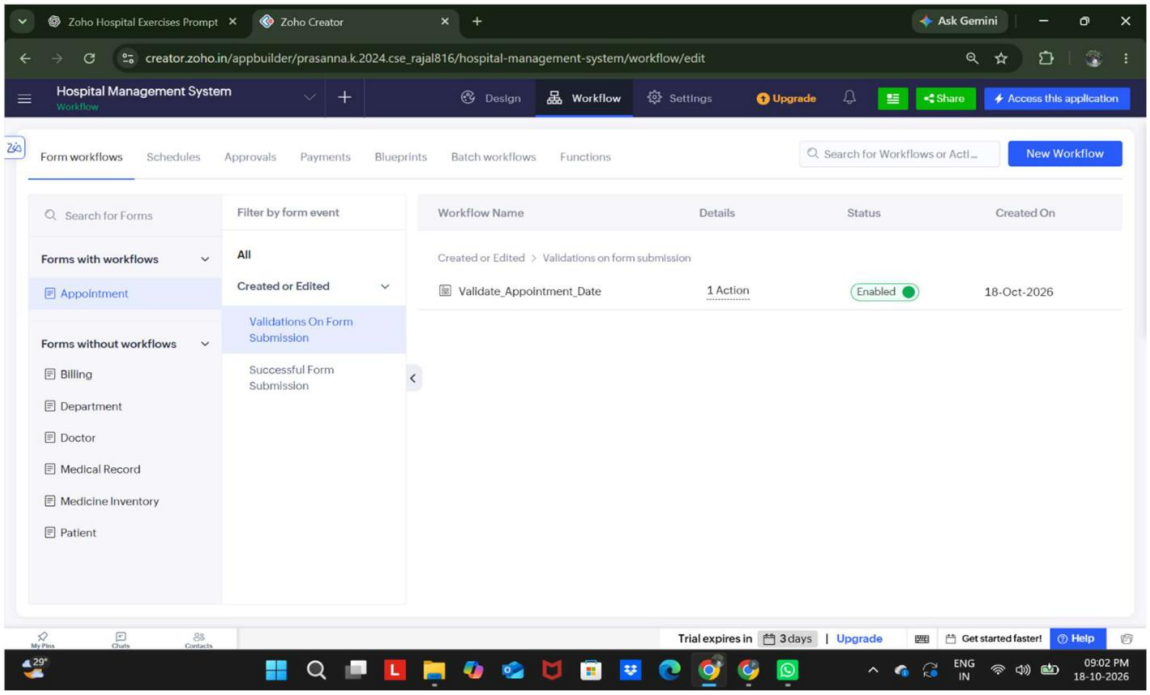

Figure 18: Saving the email notification action.

Preparing Appointment Reminders

The reminder process uses a Deluge workflow to automate appointment notifications. The workflow configuration and conditions are reviewed and saved to support timely reminders and reduce missed visits.

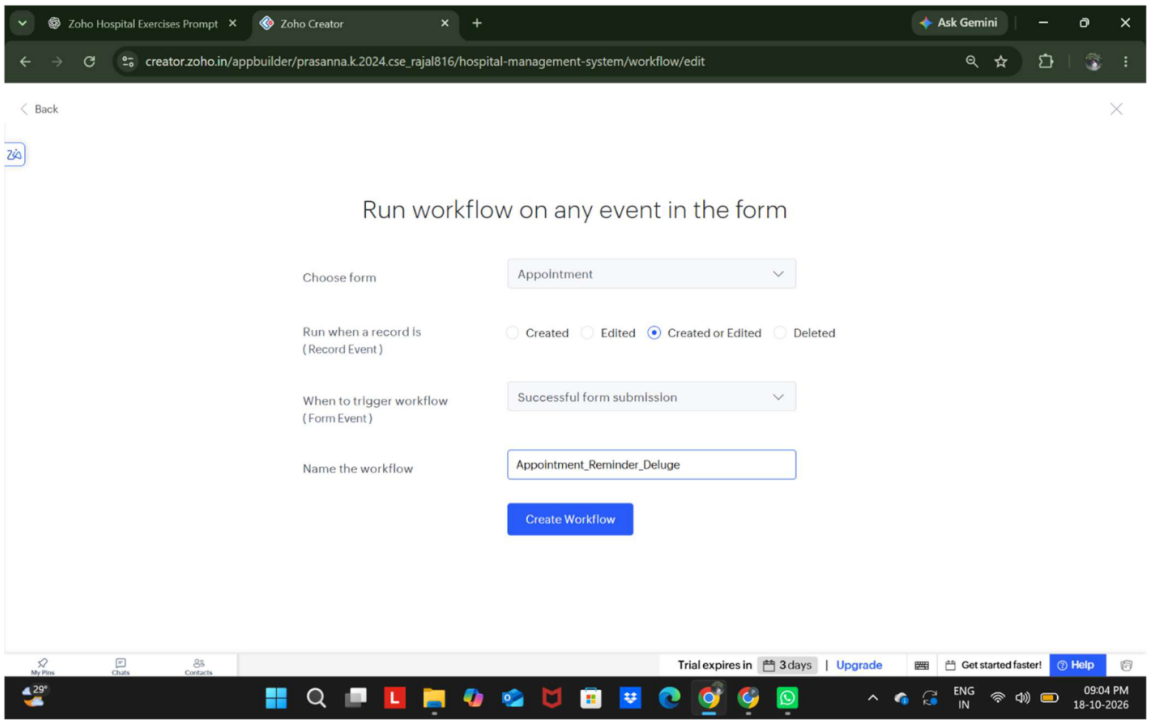

Figure 20: Configuring the reminder workflow.

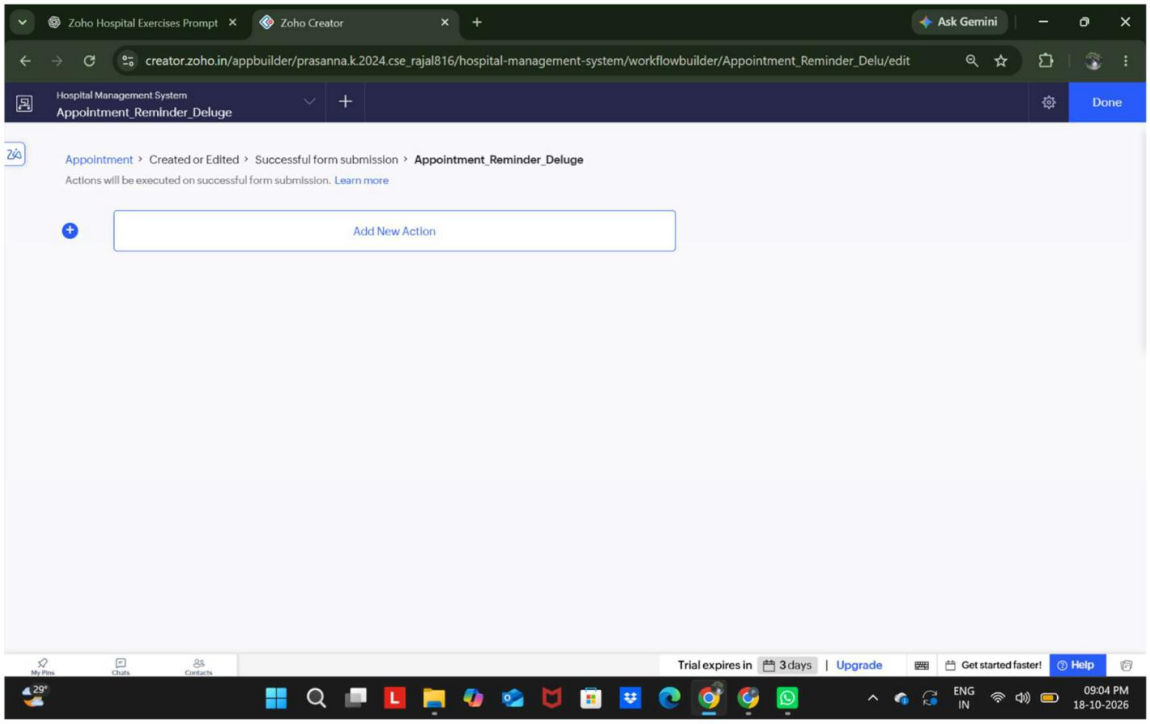

Figure 21: Opening the Deluge script editor for reminders.

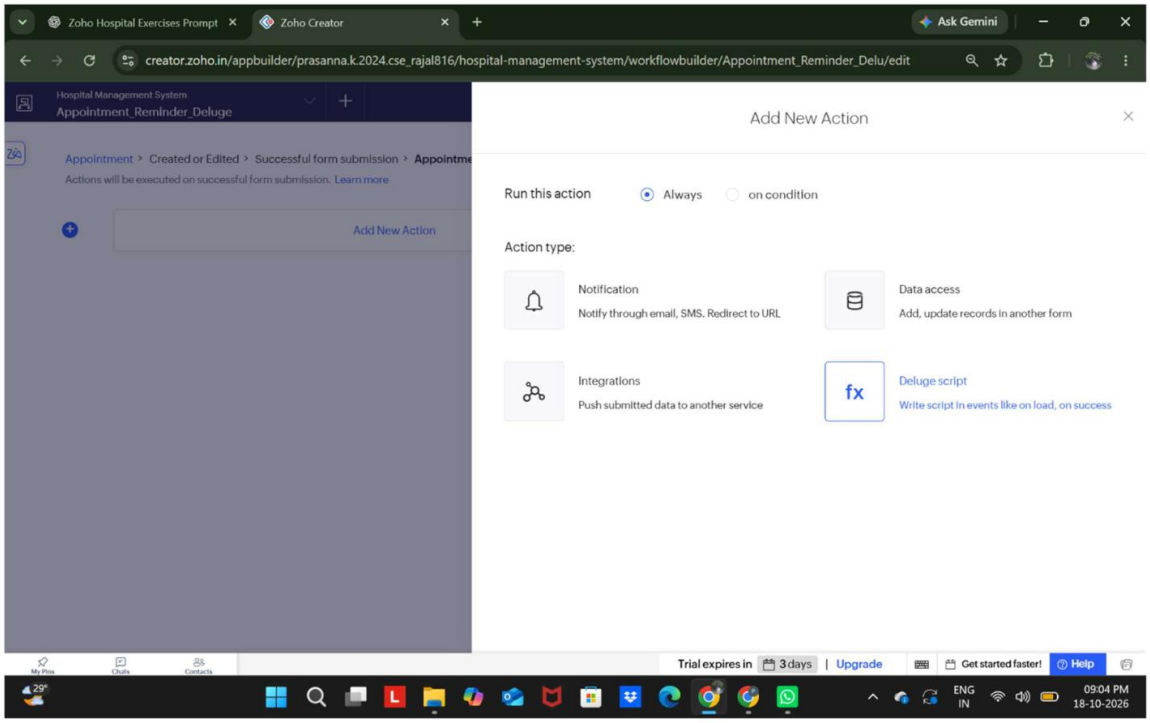

Figure 22: Entering the appointment reminder script.

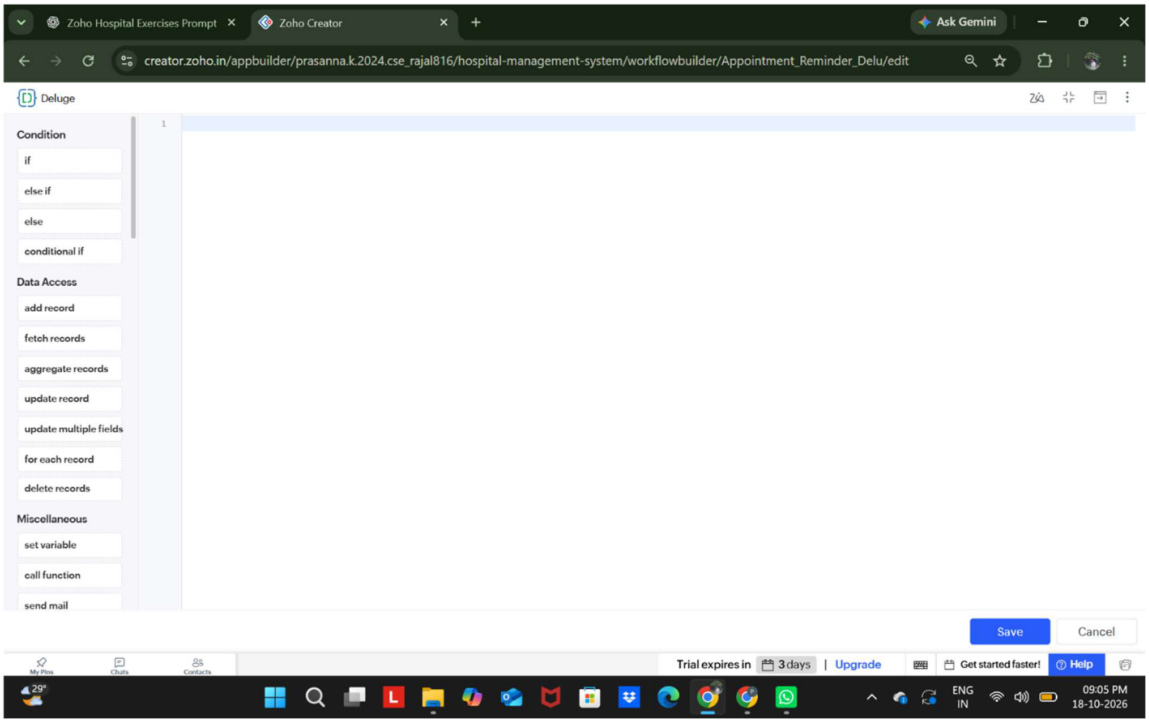

Figure 23: Configuring appointment reminder conditions.

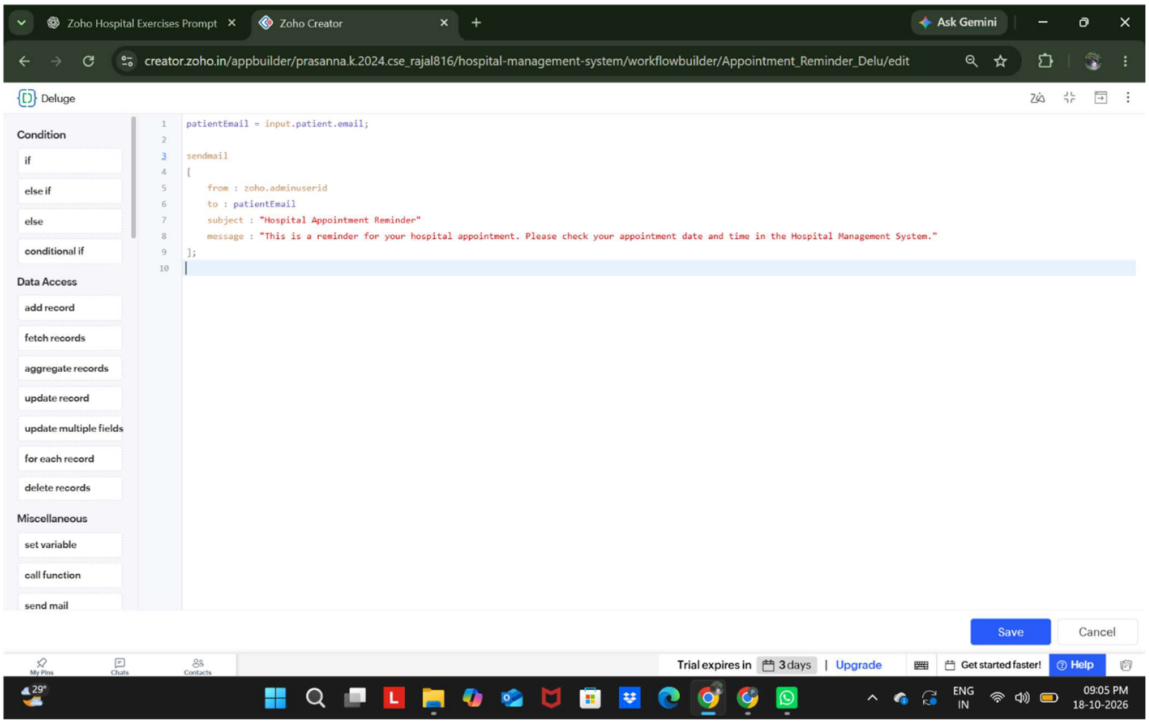

Figure 24: Checking the script field names.

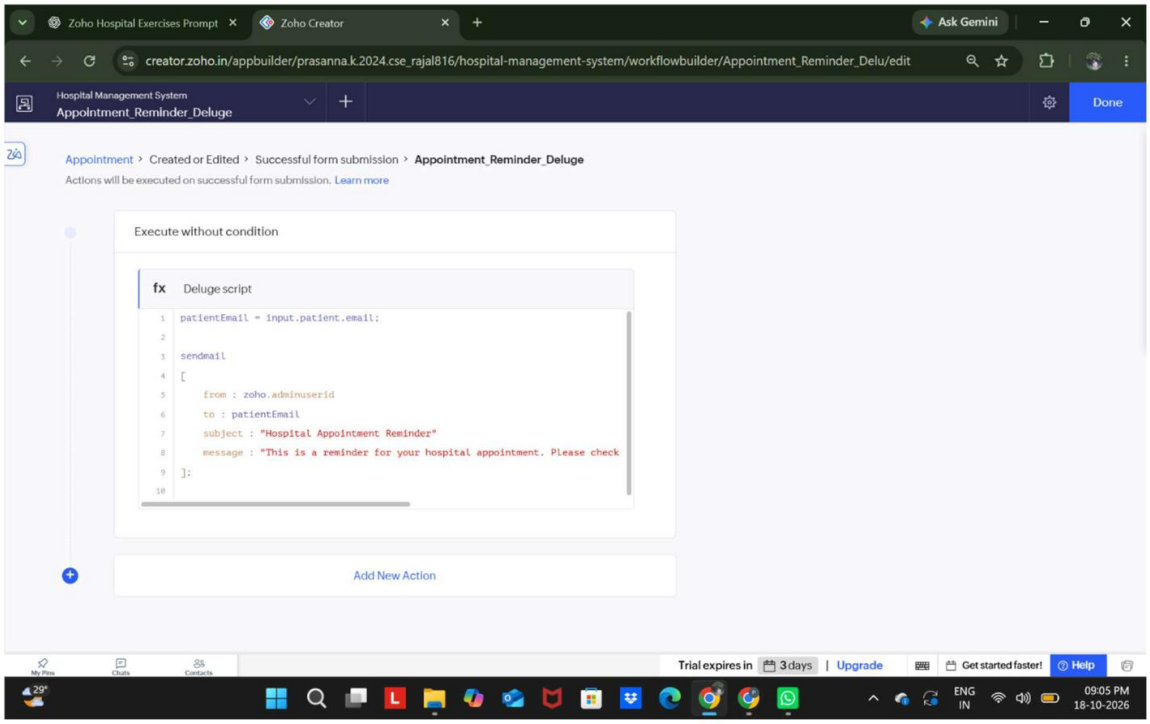

Figure 25: Validating and saving the Deluge script.

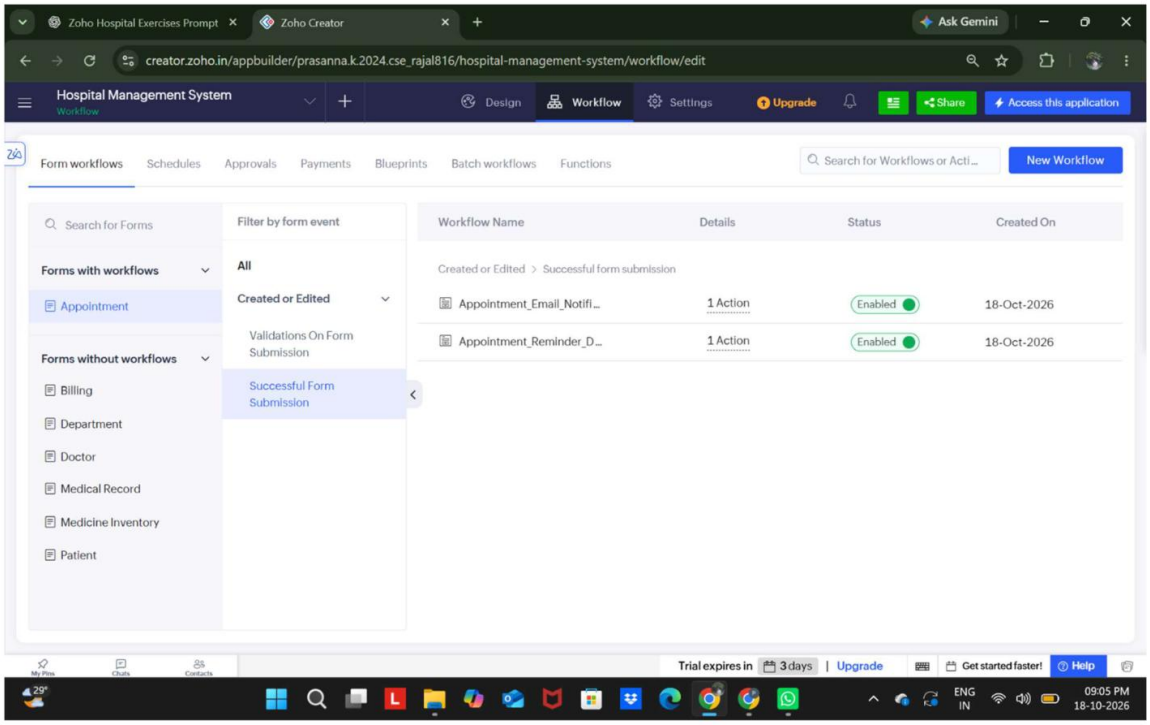

Figure 26: Reviewing the configured appointment reminder workflow.

Verifying the Workflow Setup

The final workflow page provides an overview of the three configured processes: date validation, email notification and appointment reminders. Reviewing this page helps confirm that the workflow entries are available.

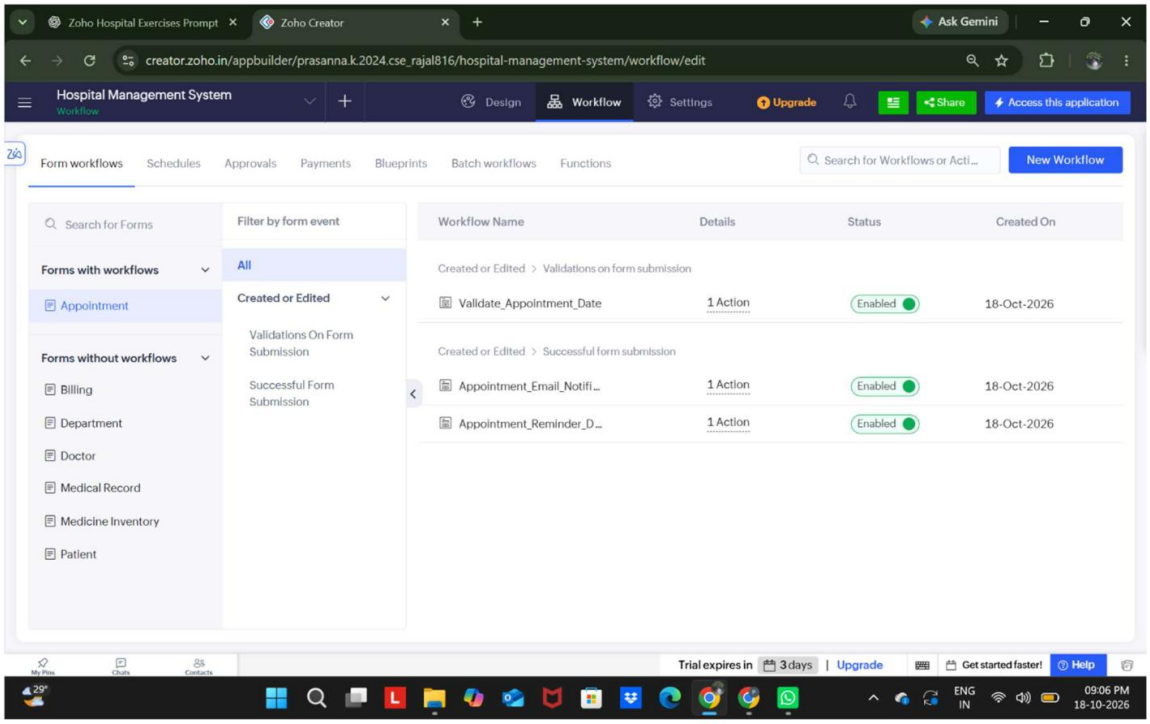

Figure 27: Final workflow page in Zoho Creator.

Result

The practical demonstrates three appointment-related automations in Zoho Creator: date validation, email confirmation and reminder handling. Reviewing the final workflow page provides an overview of the configured workflows.
