LAB EXERCISE 10

DAILY, WEEKLY AND MONTHLY SCHEDULE AUTOMATION IN ZOHO CREATOR

Aim

To configure daily appointment reminders, weekly appointment summaries and monthly appointment reports for the Hospital Management System using scheduled workflows in Zoho Creator.

Procedure / Implementation

1. Launch the Hospital Management System in Zoho Creator and open the Schedules section under Workflow.
2. Set up three scheduled workflows, one for each required interval: daily, weekly and monthly.
3. Configure the recurrence and execution time for each schedule, then add its corresponding Deluge action.
4. Save the scripts, run the available test execution and confirm the enabled state in the Schedules list.

Schedule Setup

The first figure shows the Schedules area before the scheduled workflows are added.

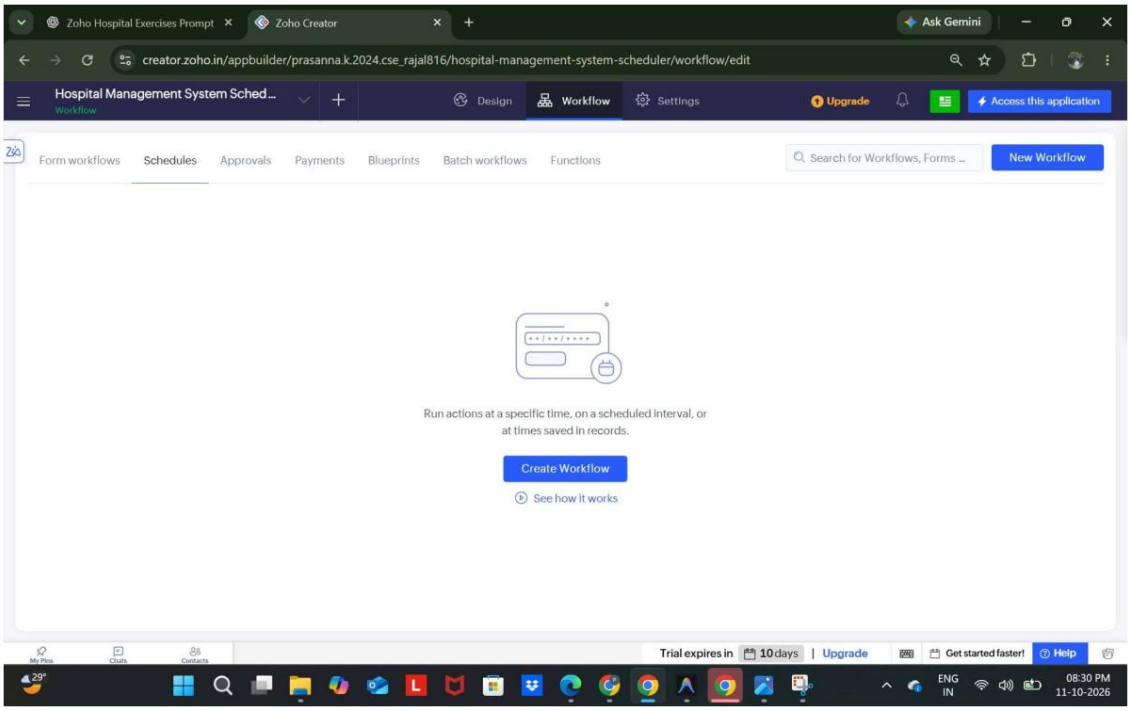

Figure 1

1. Daily Appointment Reminder Schedule

This schedule runs at 08:00 AM. Its Deluge script checks the following day's appointments, selects Scheduled or Confirmed records for which a reminder has not been sent, retrieves the linked patient's email address, sends the appointment date and time, and marks the reminder status as Sent.

Creating the Daily Schedule

The daily appointment reminder schedule is configured to execute at 08:00 AM. The schedule is intended to check appointments for the following day.

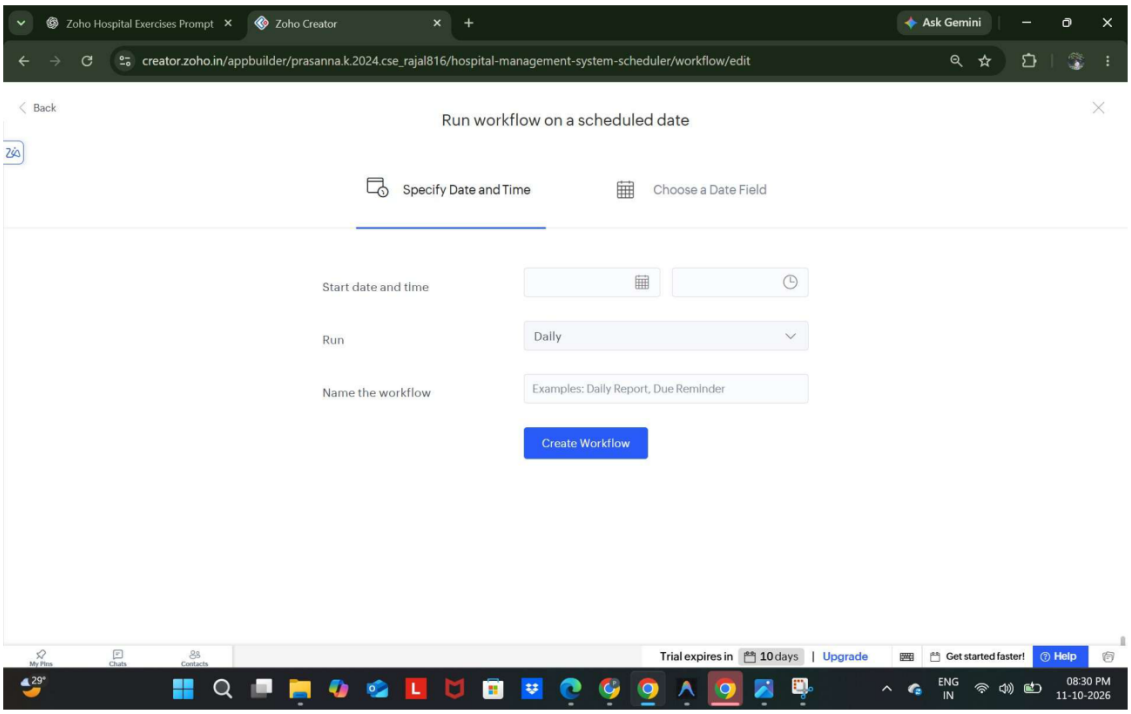

Figure 2

Selecting the Schedule Recurrence

The scheduled workflow is set up with a daily recurrence and a descriptive workflow name so that the reminder task runs each day.

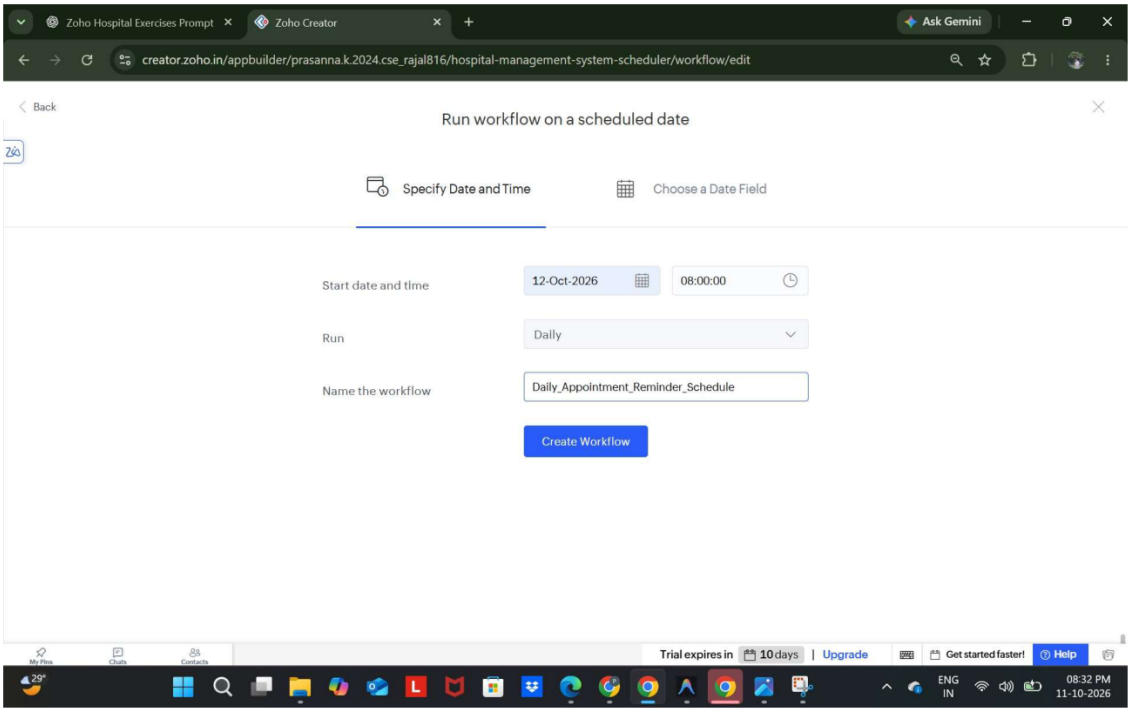

Figure 3

Preparing the Reminder Workflow

After the schedule is created, its workflow canvas is opened and an action is added to carry out the reminder operation.

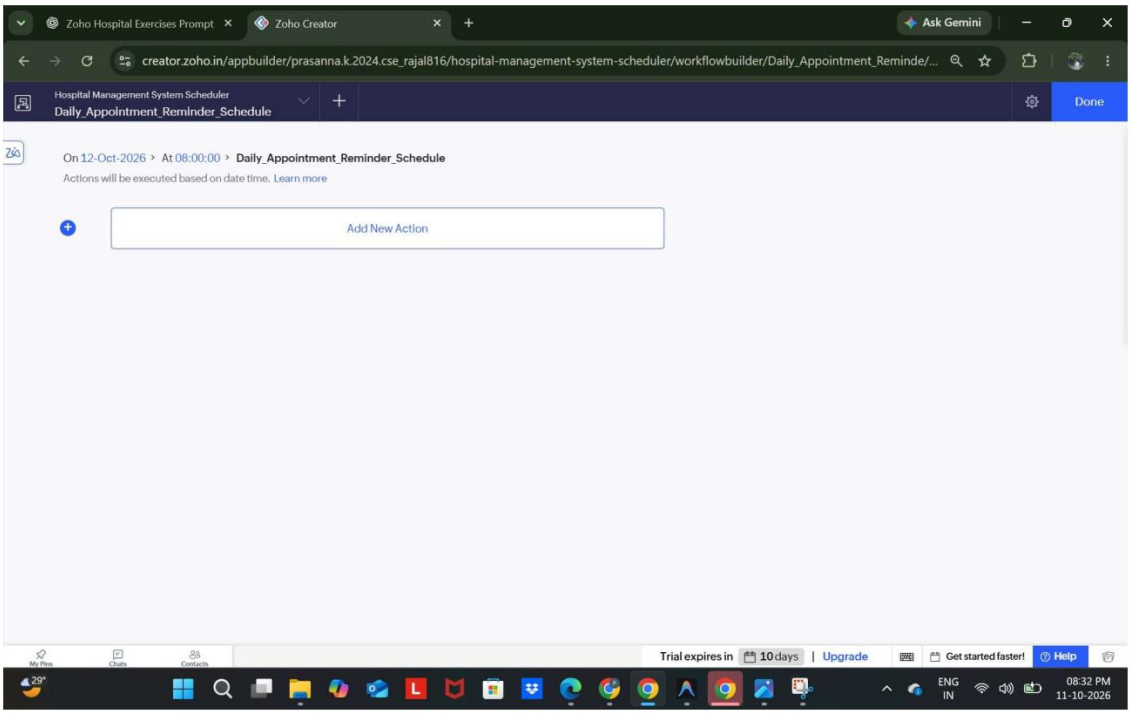

Figure 4

Choosing a Deluge Action

The action panel provides the Deluge script option. This is selected to add the logic required for checking appointments and sending reminders.

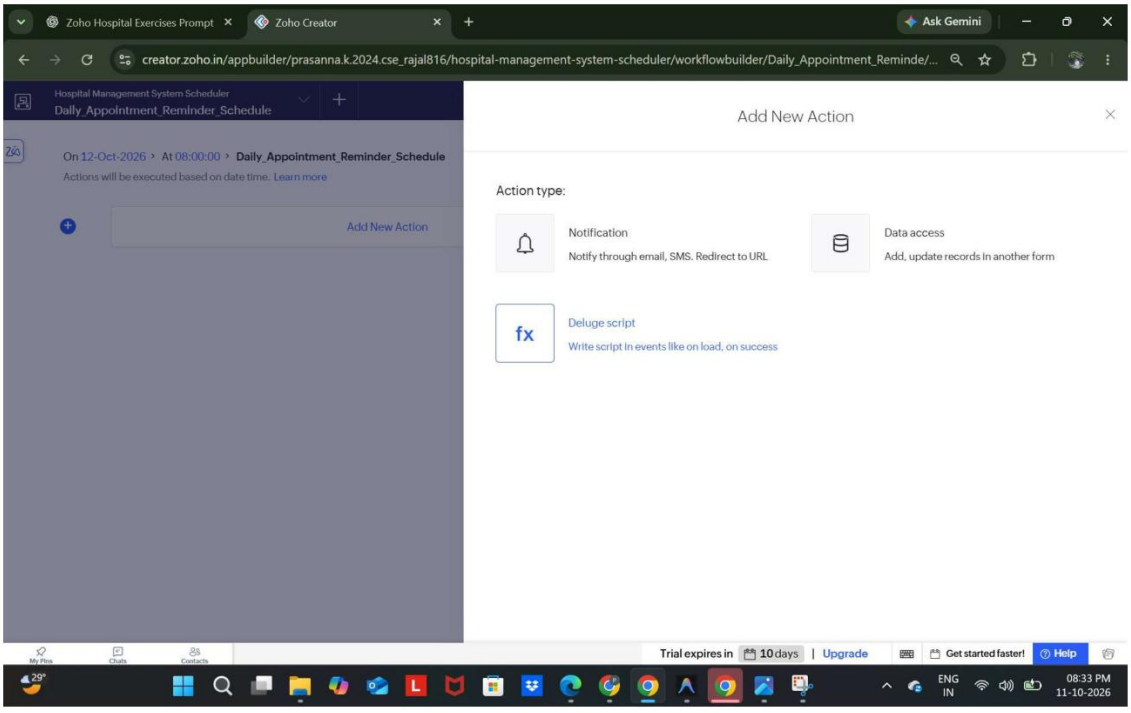

Figure 5

Opening the Script Editor

The Deluge editor is used to write the daily reminder logic for the Hospital Management System.

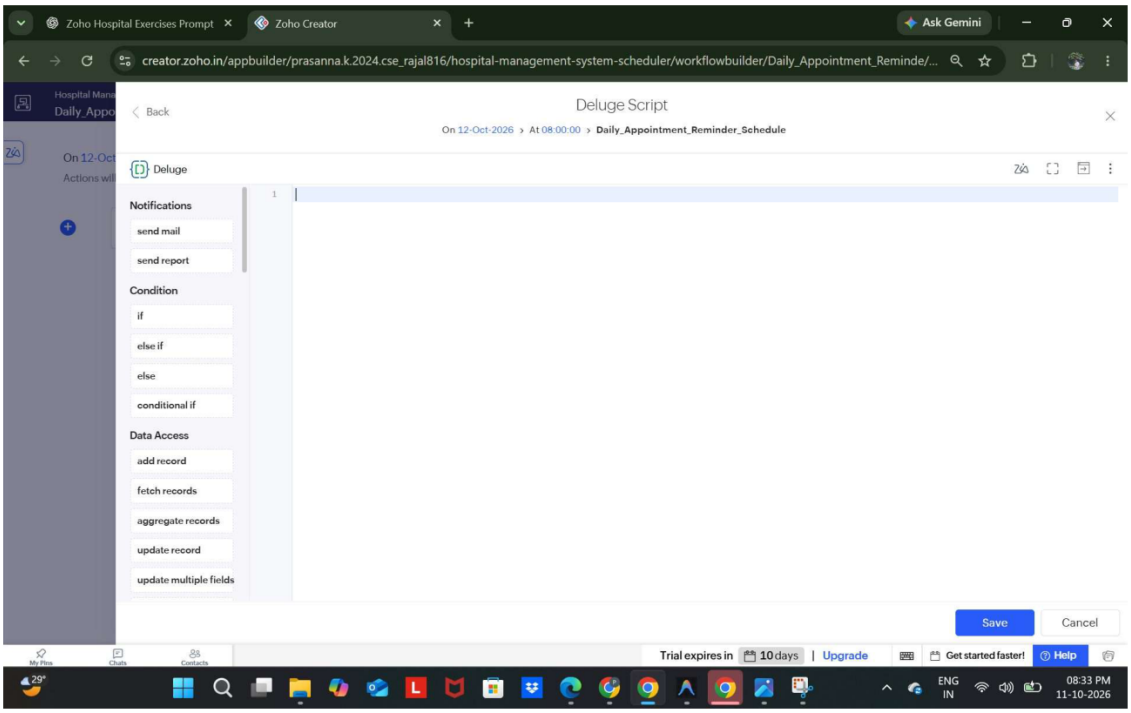

Figure 6

Checking Upcoming Appointments

The script checks appointments for the next day and filters the records to those with Scheduled or Confirmed status where a reminder has not yet been sent.

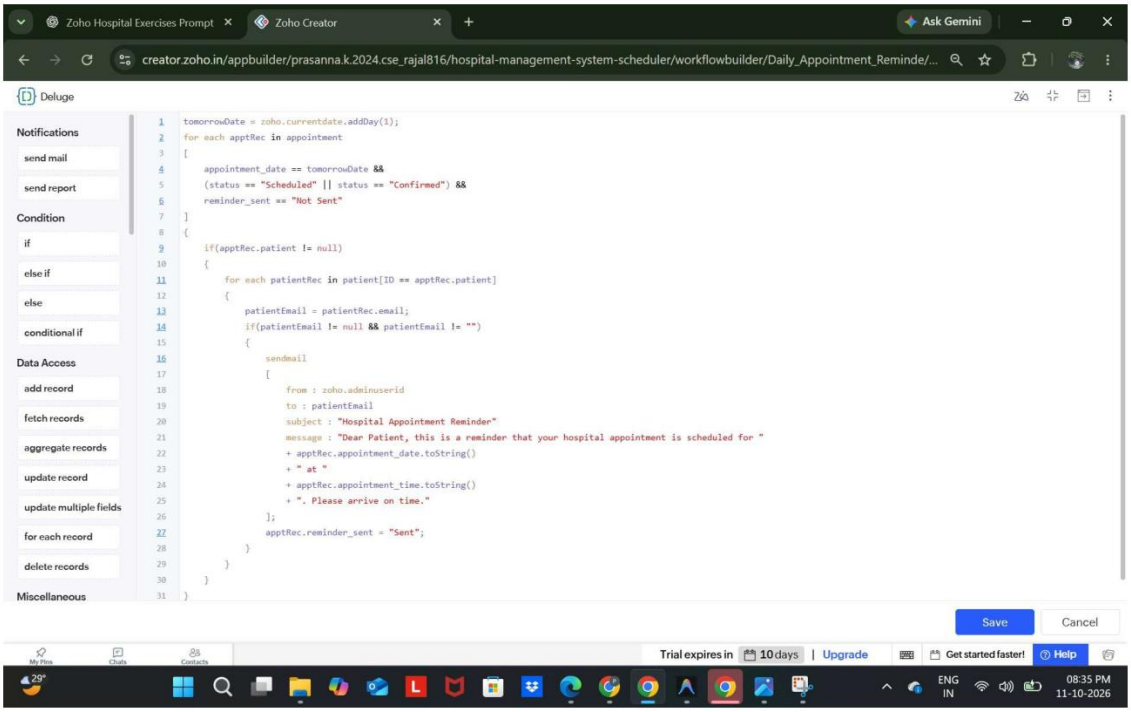

Figure 7

Retrieving Patient Contact Details

For each eligible appointment, the workflow retrieves the linked patient's email address and prepares a message containing the appointment date and time.

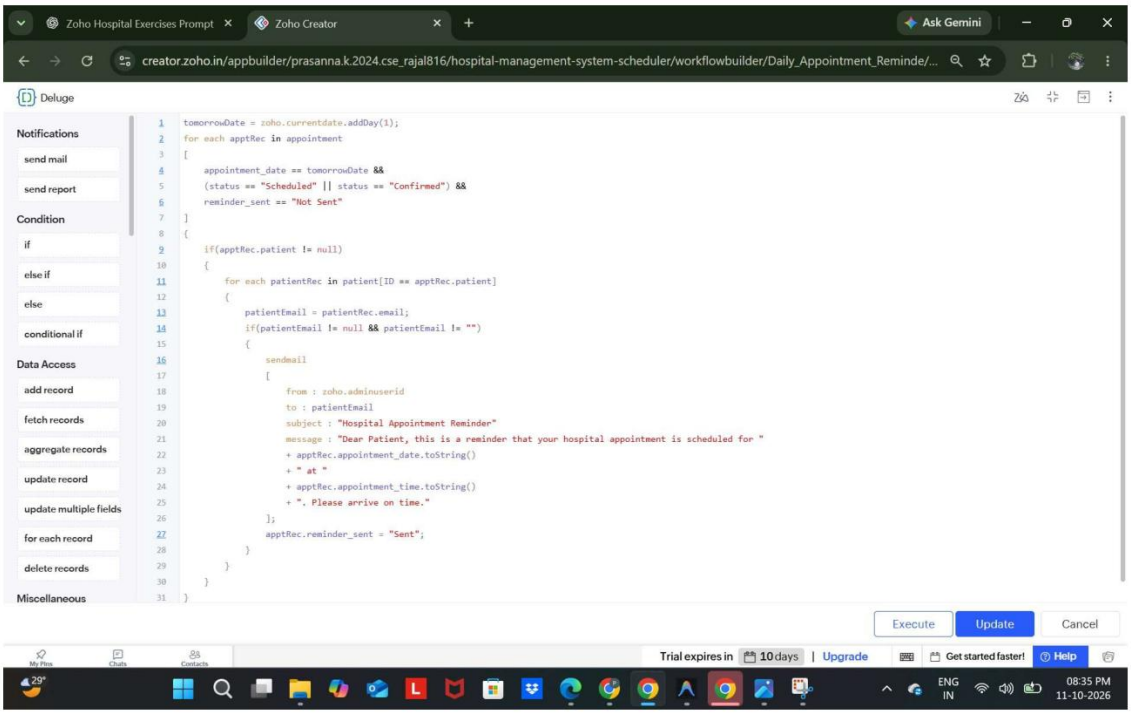

Figure 8

Testing the Reminder Script

The Execute option is used to test the script. The source practical shows a successful execution result for the daily reminder action.

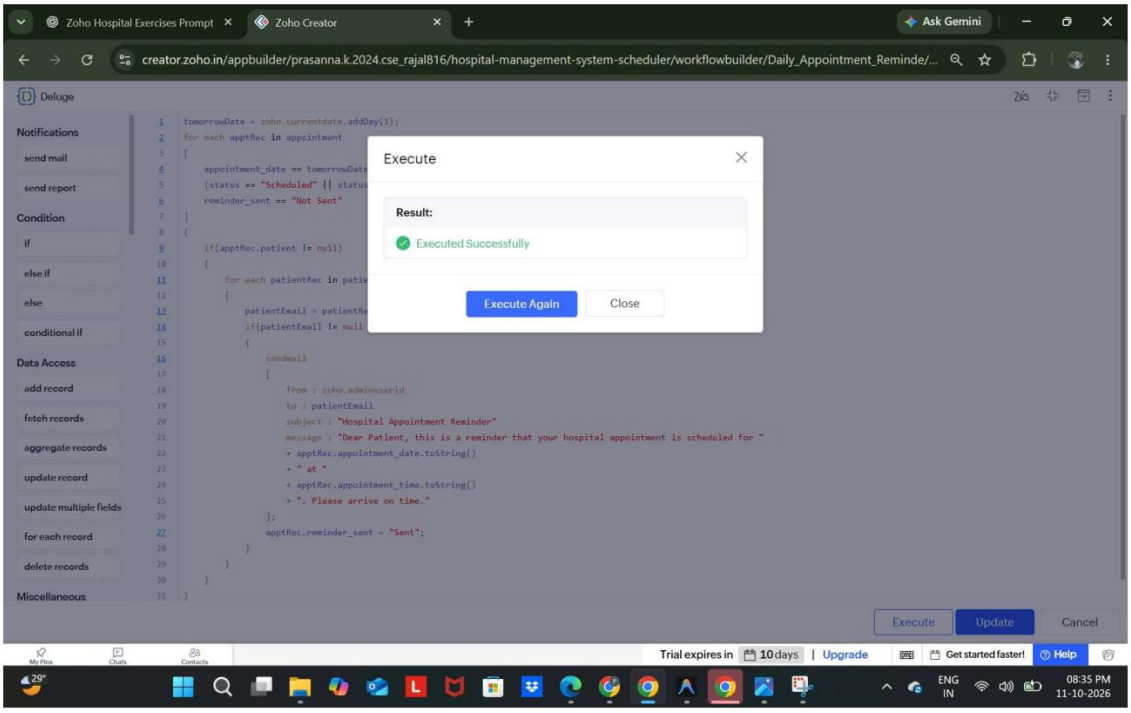

Figure 9

Adding the Script to the Workflow

After testing, the Deluge action is displayed in the workflow builder as part of the daily schedule.

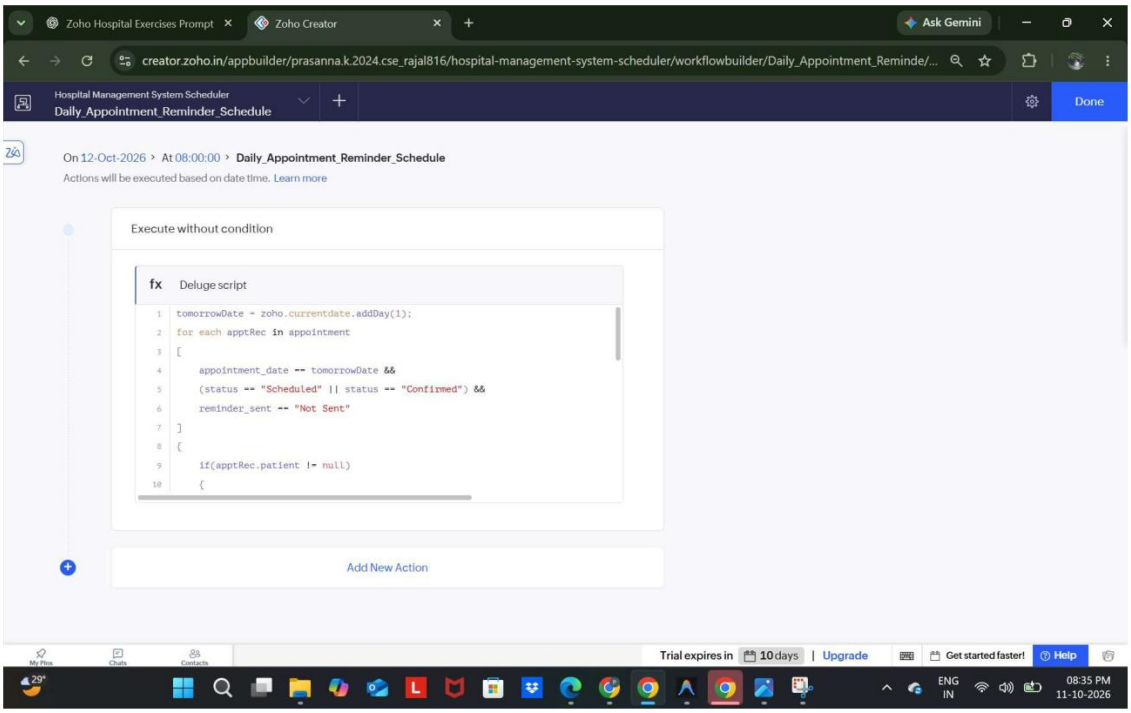

Figure 10

Verifying the Daily Schedule

The Schedules list displays Daily_Appointment_Reminder_Schedule with its status shown as enabled.

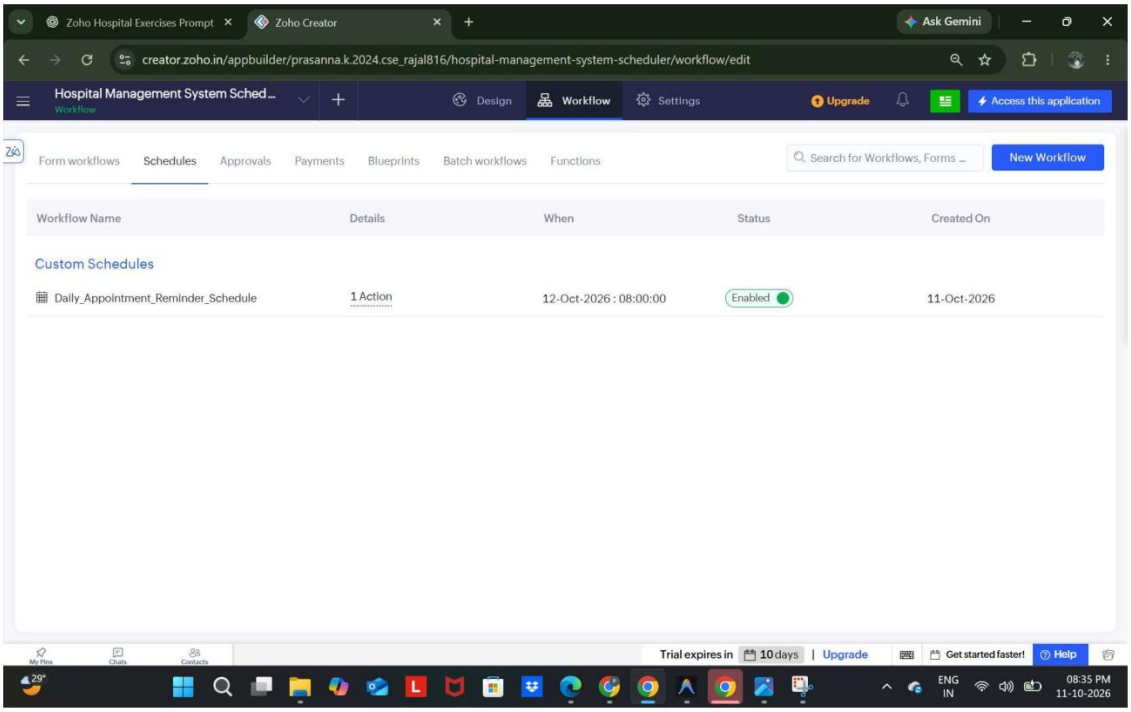

Figure 11

2. Weekly Appointment Summary Schedule

The weekly schedule runs at 09:00 AM. Its script examines appointments from the current date through the next seven days, includes Scheduled and Confirmed records, and prepares an email summary with appointment dates, times and statuses. If no matching appointments are available, it sends a no-appointments message.

Creating the Weekly Summary Schedule

A separate schedule is created for the weekly appointment summary. Its configured execution time is 09:00 AM.

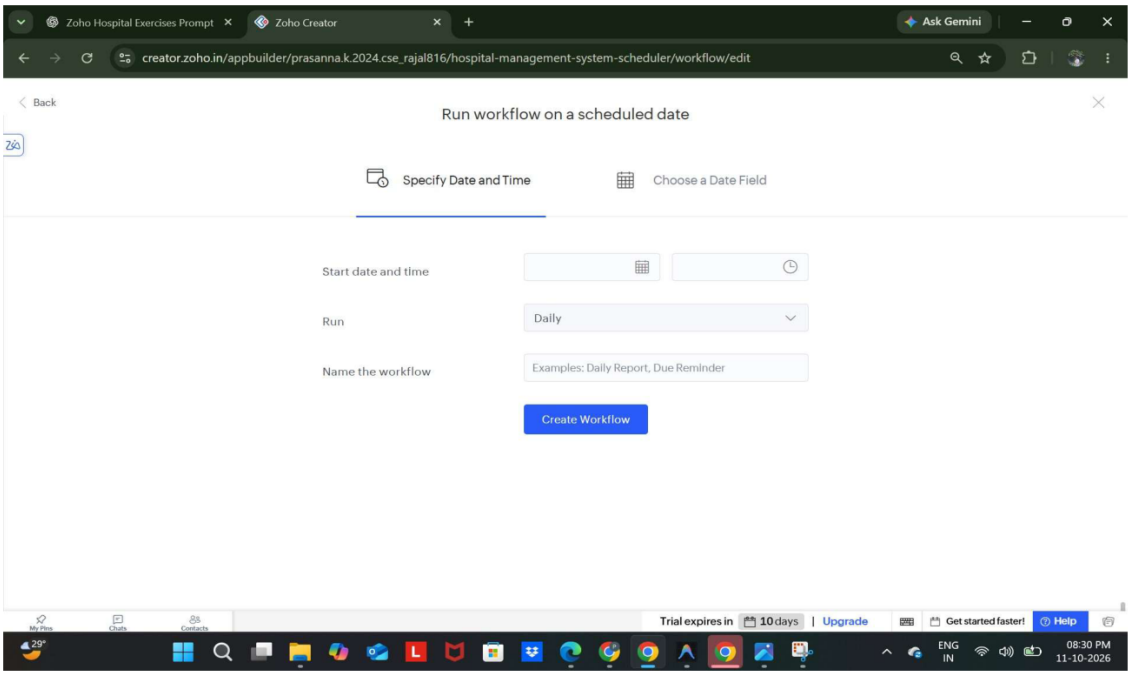

Figure 12

Setting Weekly Recurrence

The schedule is assigned a weekly recurrence and a workflow name identifying it as the appointment summary process.

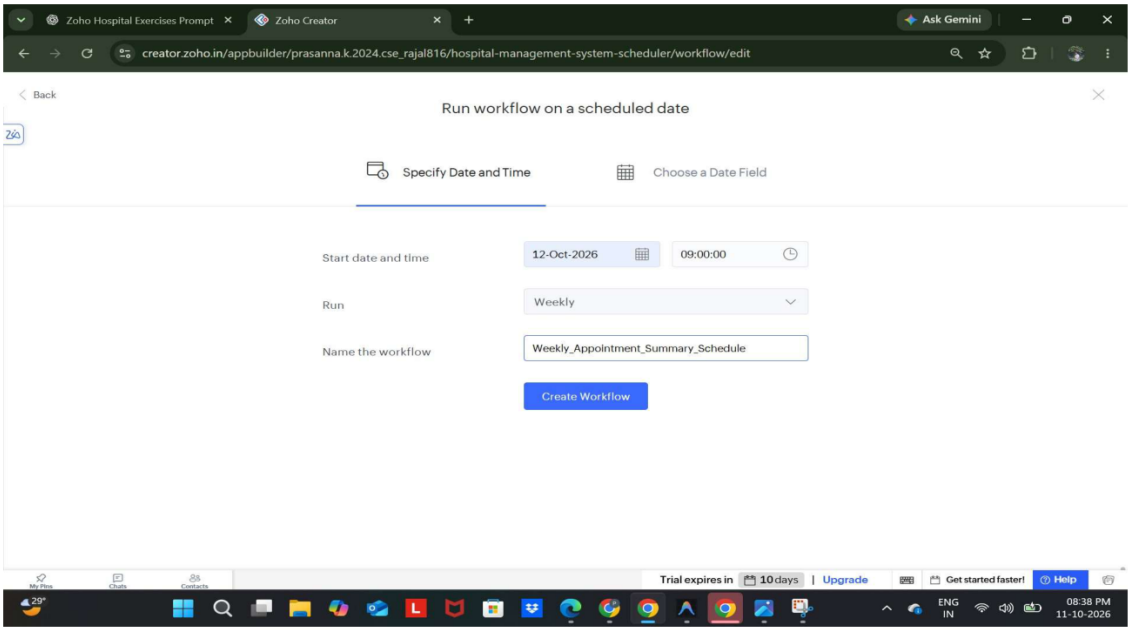

Figure 13

Opening the Weekly Workflow Canvas

Once the schedule has been created, its workflow canvas is opened so that the summary action can be added.

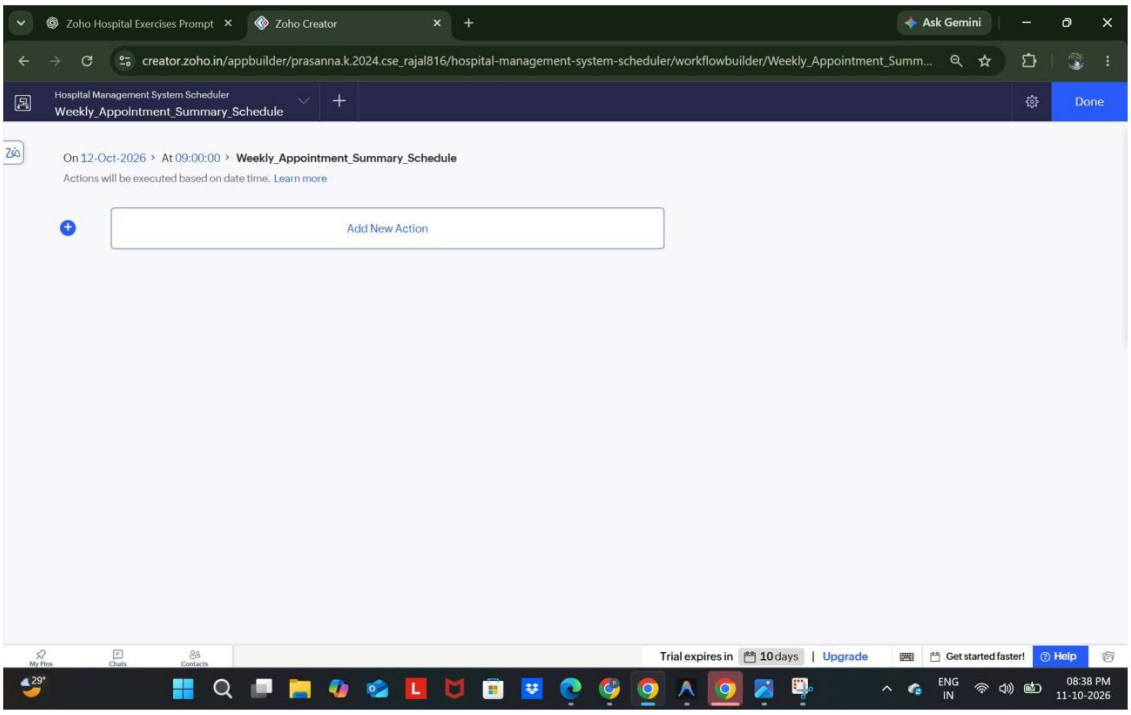

Figure 14

Selecting the Deluge Action

The action-type panel is used to select Deluge scripting for the weekly appointment summary.

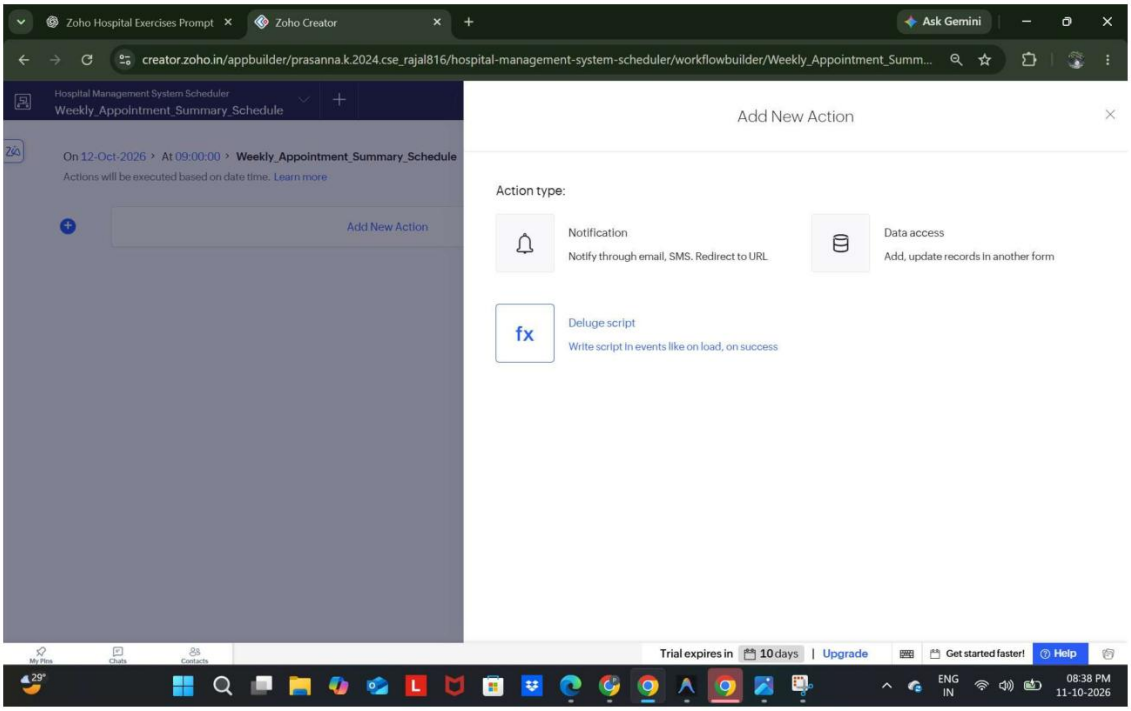

Figure 15

Opening the Weekly Script Editor

The script editor provides the area for entering the logic that gathers appointment information for the weekly email.

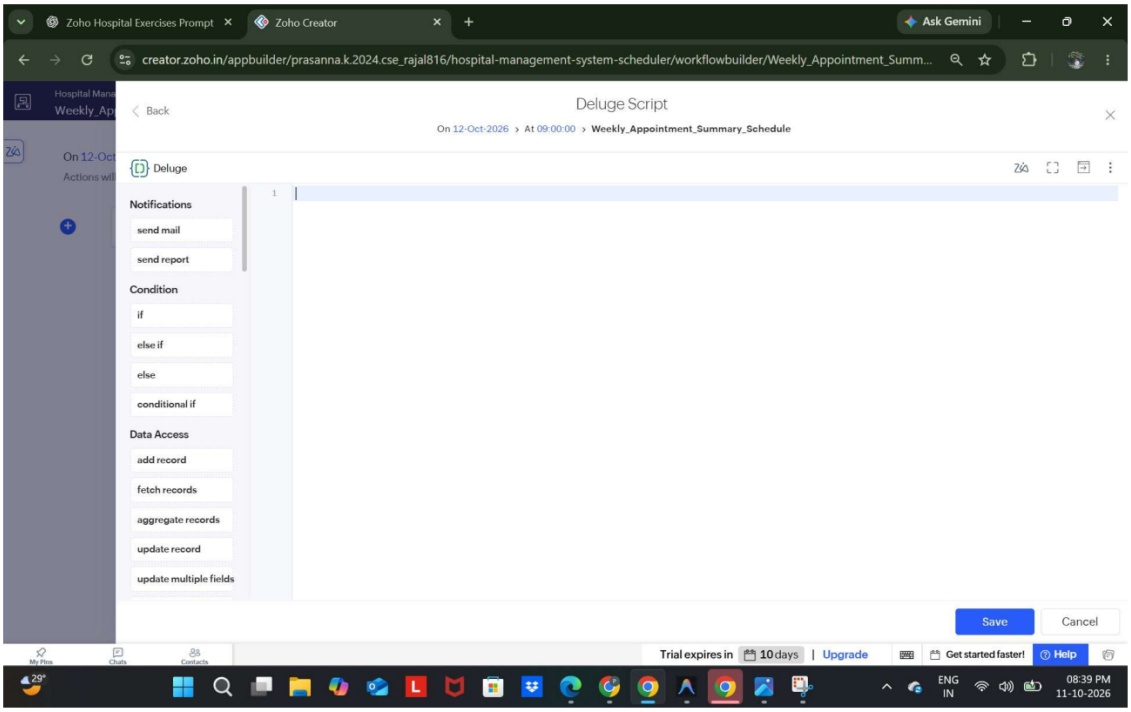

Figure 16

Selecting the Seven-Day Period

The weekly script checks appointment records from the current date through the next seven days.

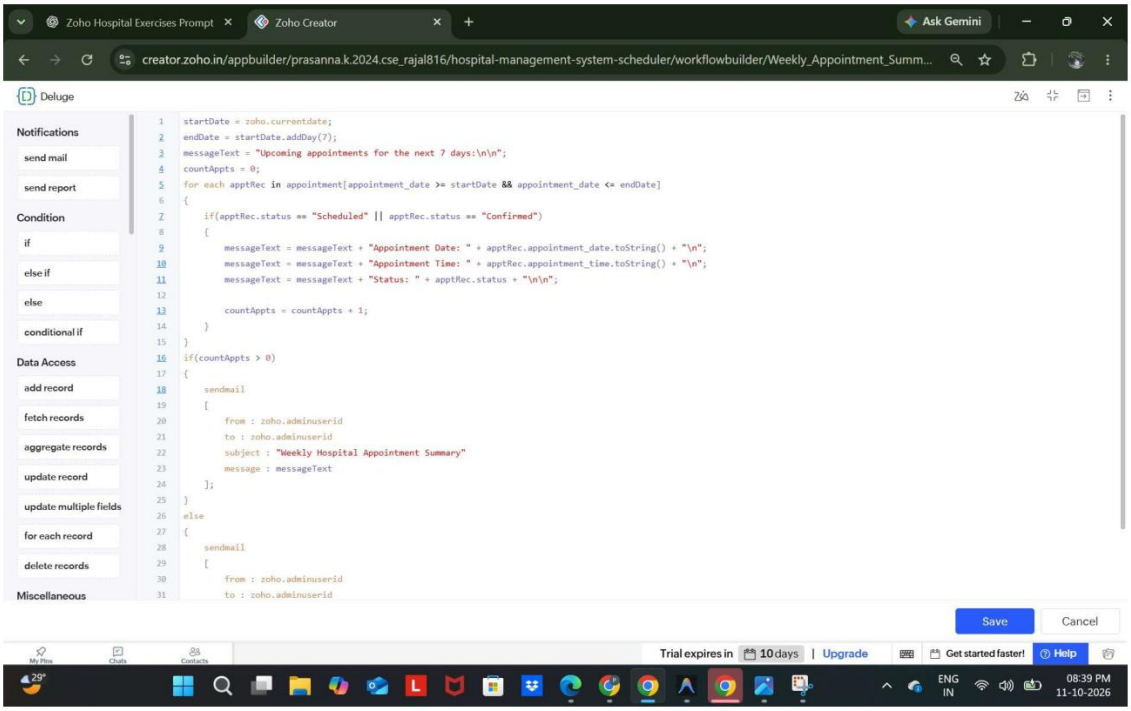

Figure 17

Preparing the Appointment Summary

Eligible records with Scheduled or Confirmed status are collected. The script prepares a summary containing appointment dates, times and statuses.

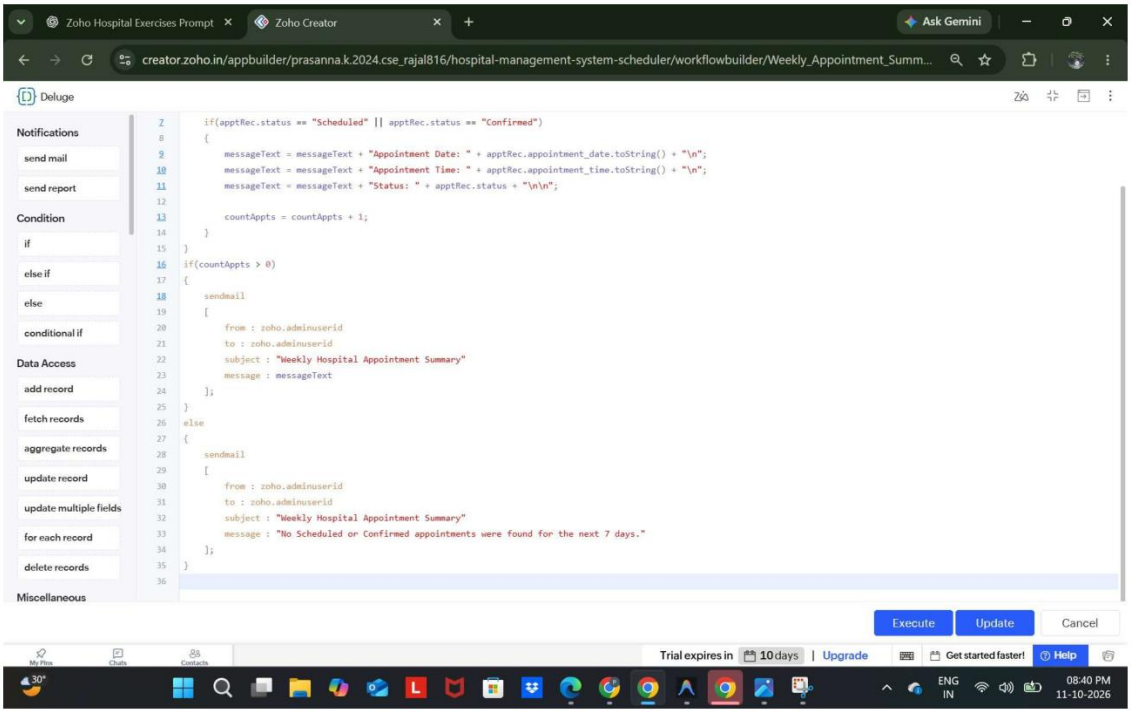

Figure 18

Handling an Empty Appointment List

When no eligible appointments are found in the selected period, the workflow prepares a message indicating that there are no appointments.

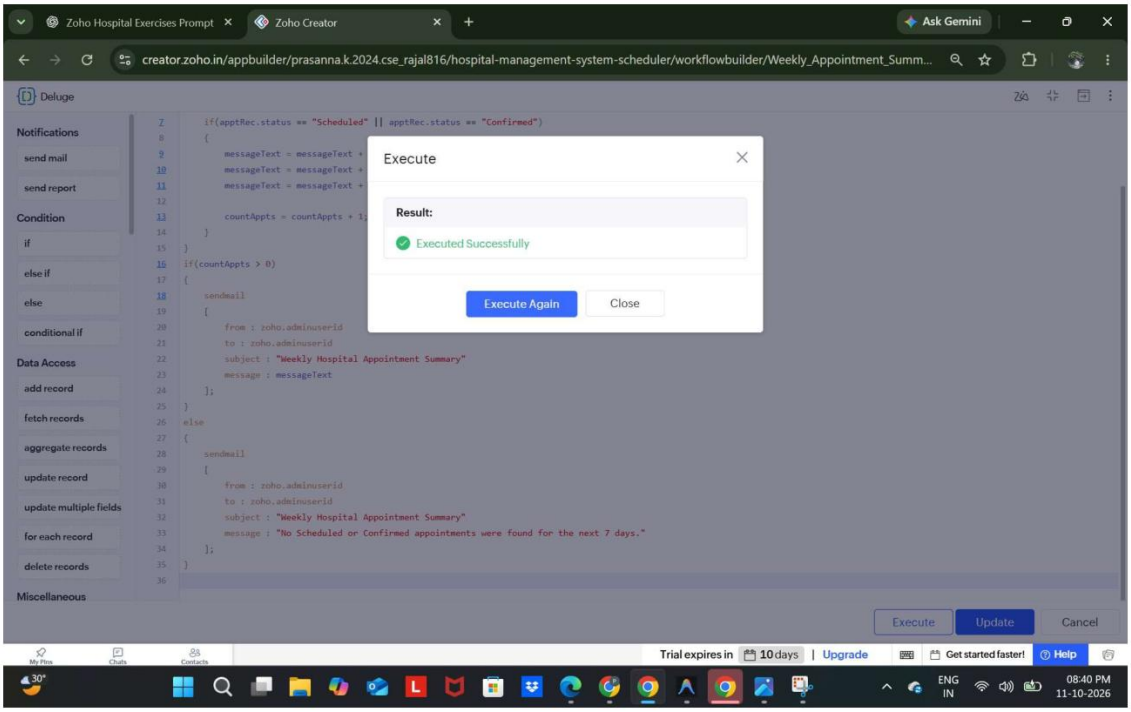

Figure 19

Testing the Weekly Summary

The script is executed from the editor to check its operation. The source practical displays a successful test execution.

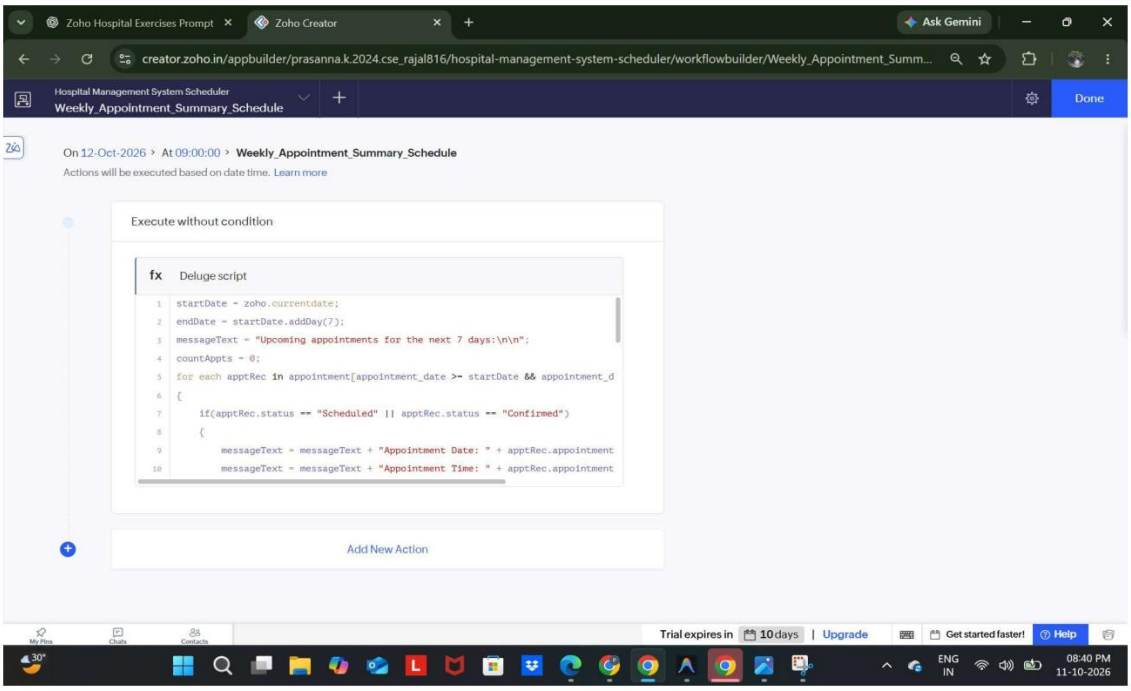

Figure 20

Verifying the Weekly Schedule

The workflow action is added to the builder, and the Schedules list shows the daily reminder and weekly summary schedules as enabled.

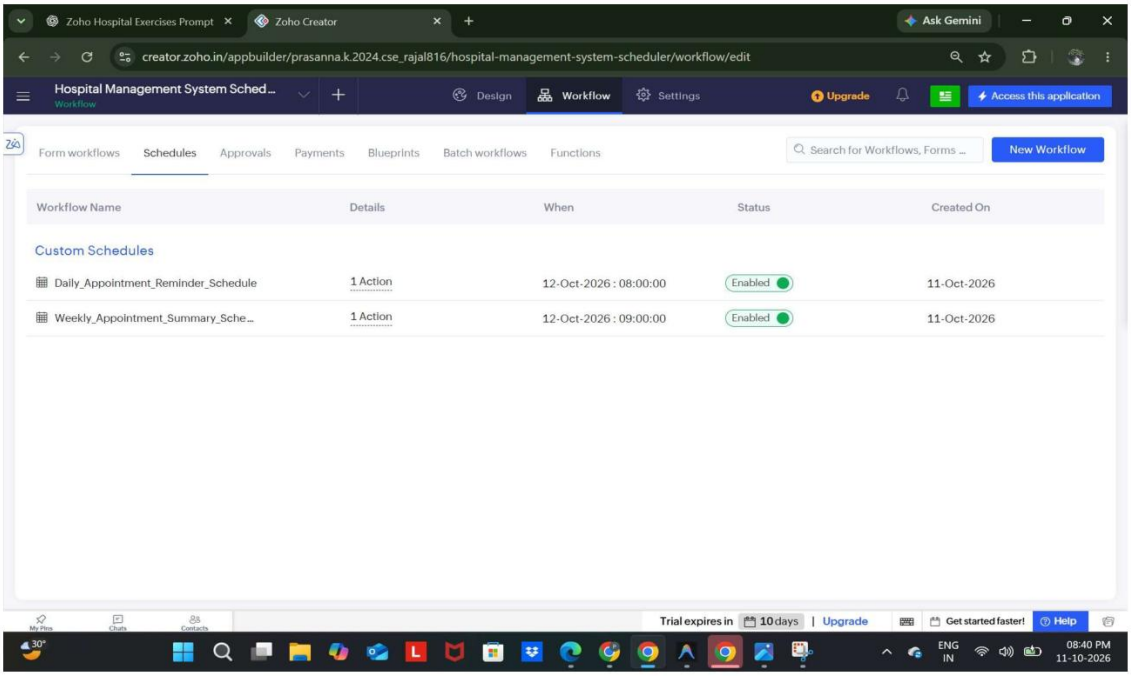

Figure 21

3. Monthly Appointment Report Schedule

The monthly schedule runs at 09:00 AM with a monthly recurrence. Its script calculates the previous calendar month, counts appointments by Scheduled, Confirmed, Completed, Cancelled and No Show status, formats the totals and emails the report to the administrator account.

Creating the Monthly Report Schedule

The monthly appointment report is configured as a recurring scheduled workflow with a 09:00 AM execution time.

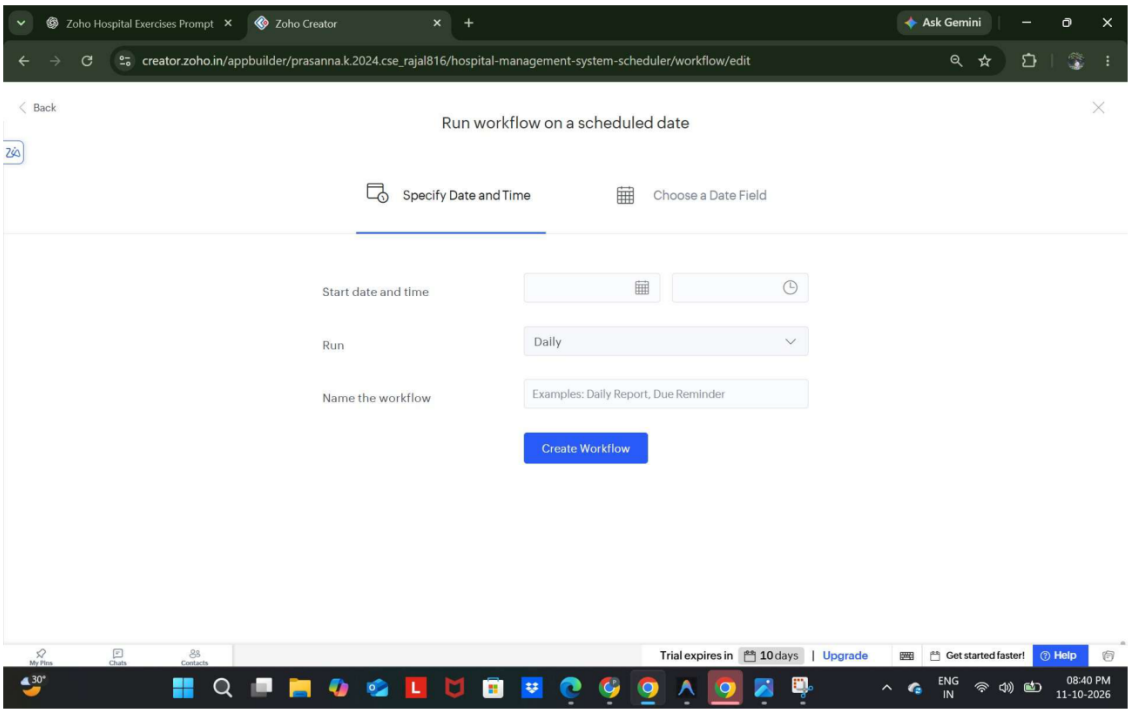

Figure 22

Setting Monthly Recurrence

The schedule is assigned a monthly recurrence and the name Monthly_Appointment_Report_Schedule.

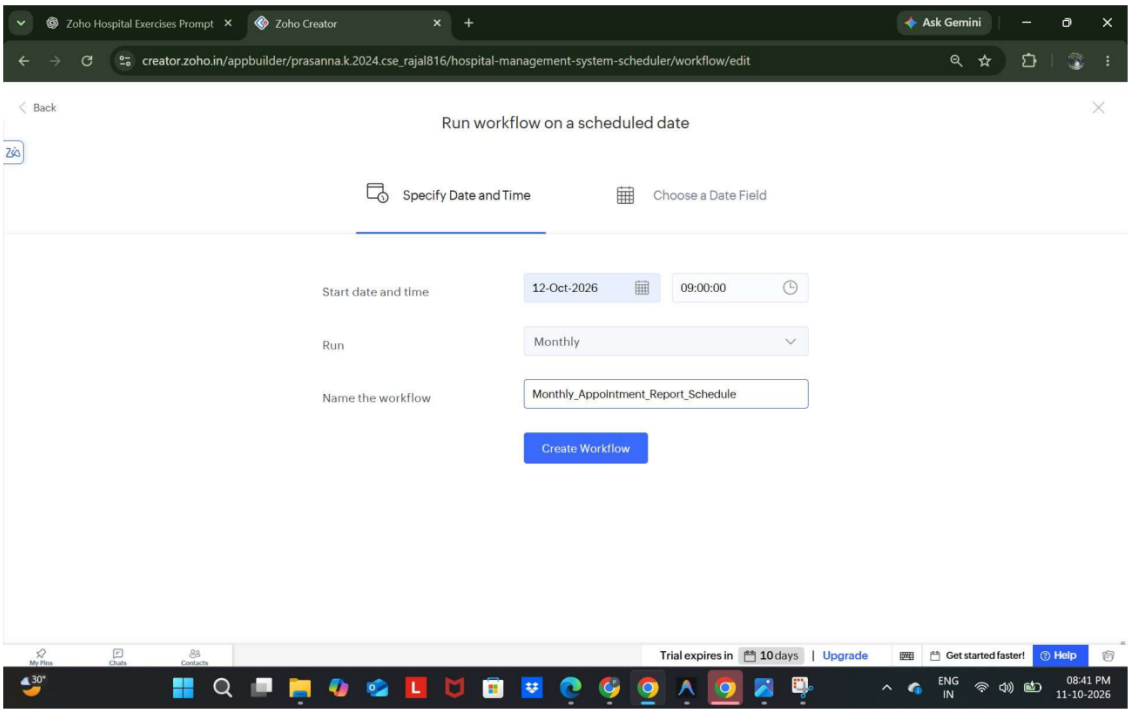

Figure 23

Opening the Monthly Workflow Canvas

After the schedule is created, the workflow canvas is opened to add the Deluge action for generating the monthly report.

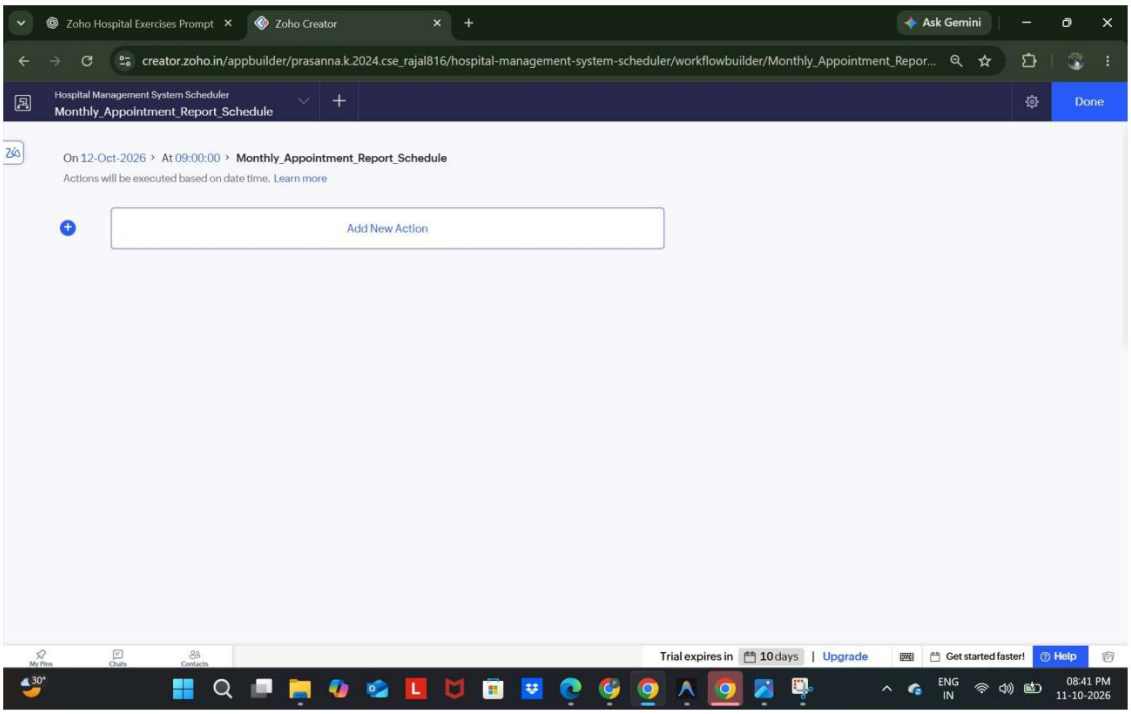

Figure 24

Selecting the Monthly Deluge Action

The action panel is used to add a Deluge script to the monthly report schedule.

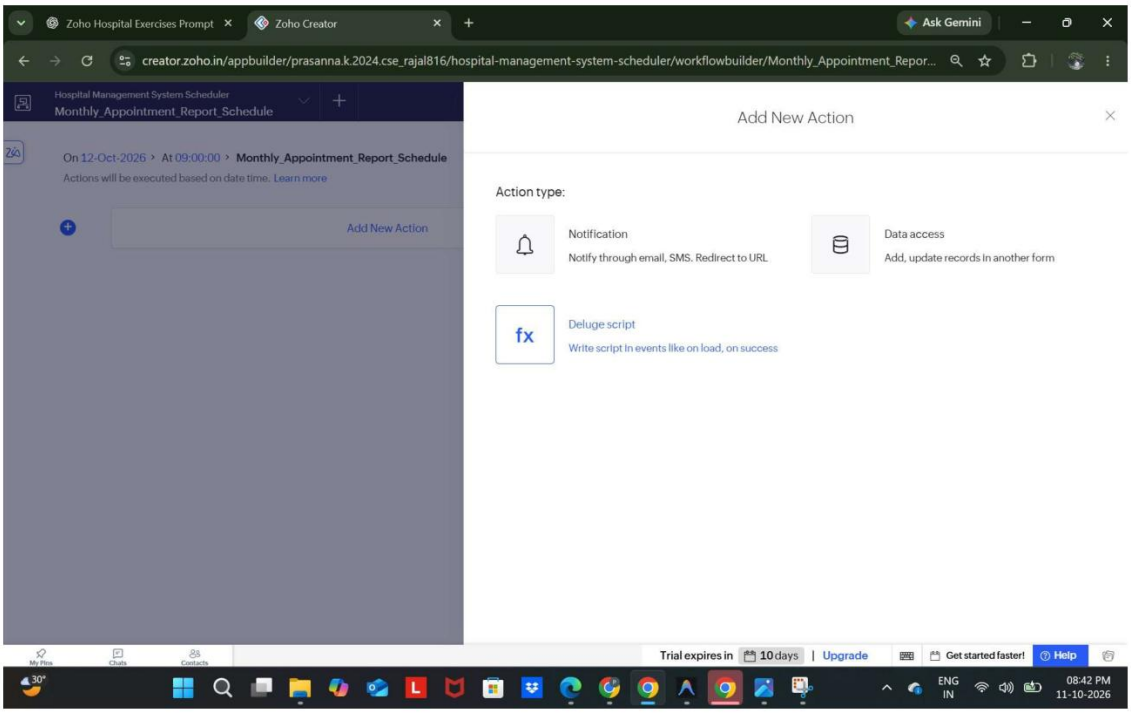

Figure 25

Opening the Monthly Script Editor

The Deluge editor is opened to enter the code that calculates the reporting period and prepares appointment totals.

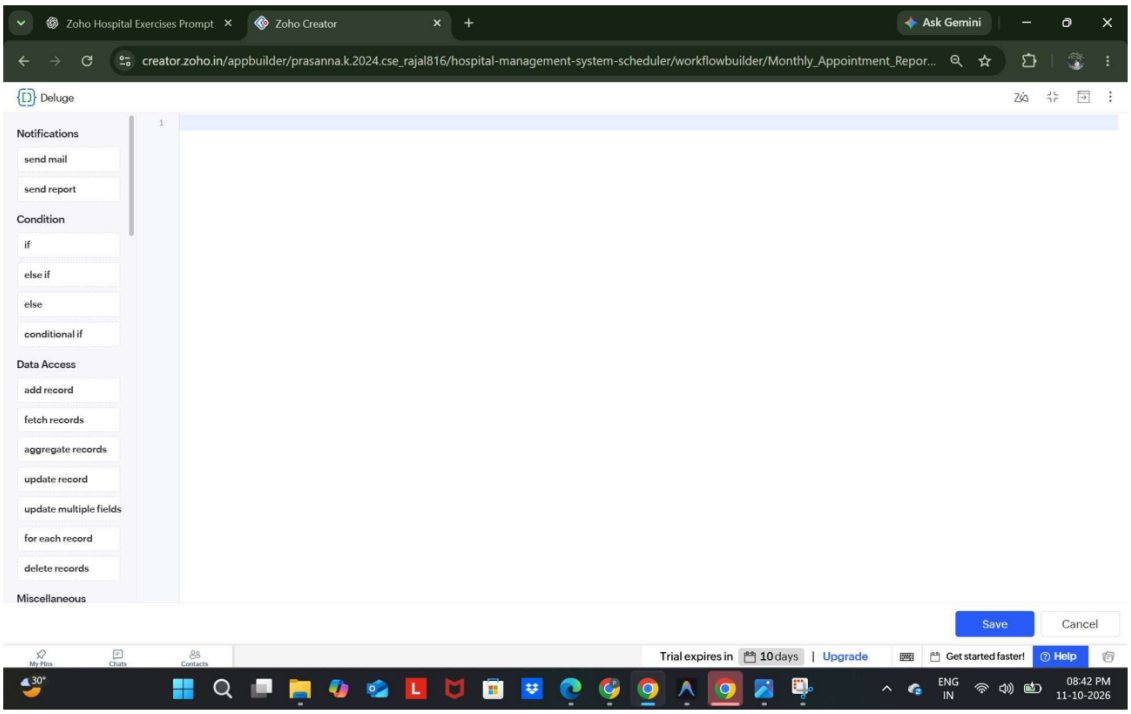

Figure 26

Calculating the Previous Month

The monthly script calculates the previous calendar month and initializes counters for the appointment statuses.

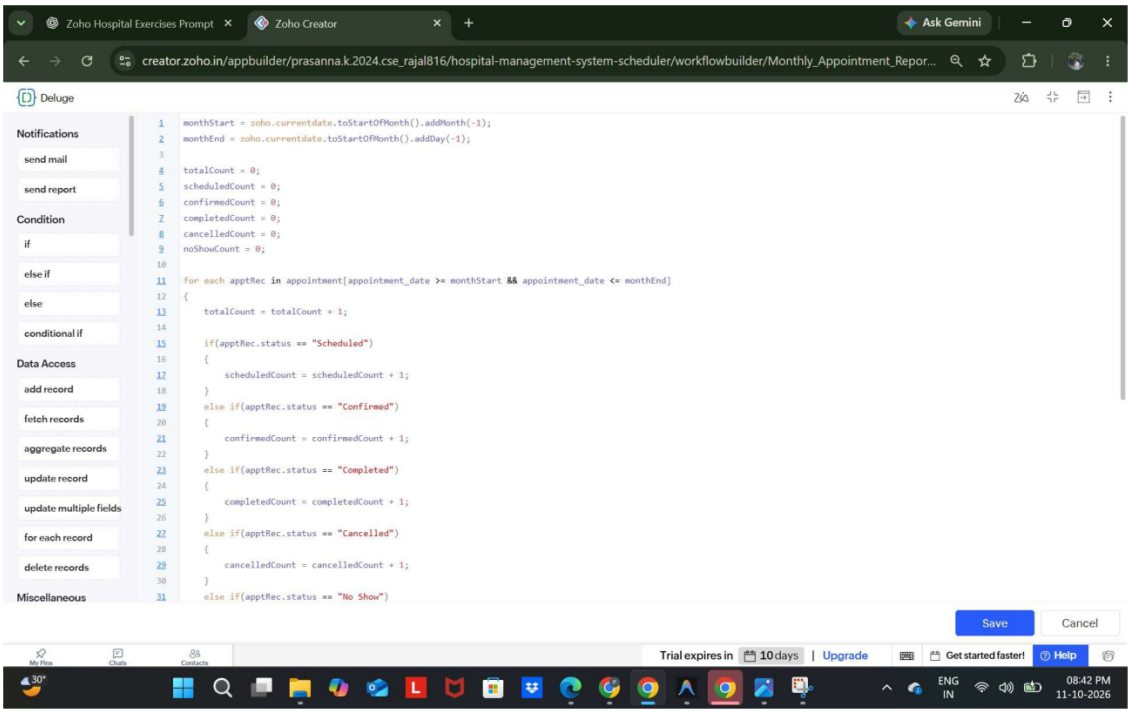

Figure 27

Counting Appointment Statuses

The report counts appointments in Scheduled, Confirmed, Completed, Cancelled and No Show statuses.

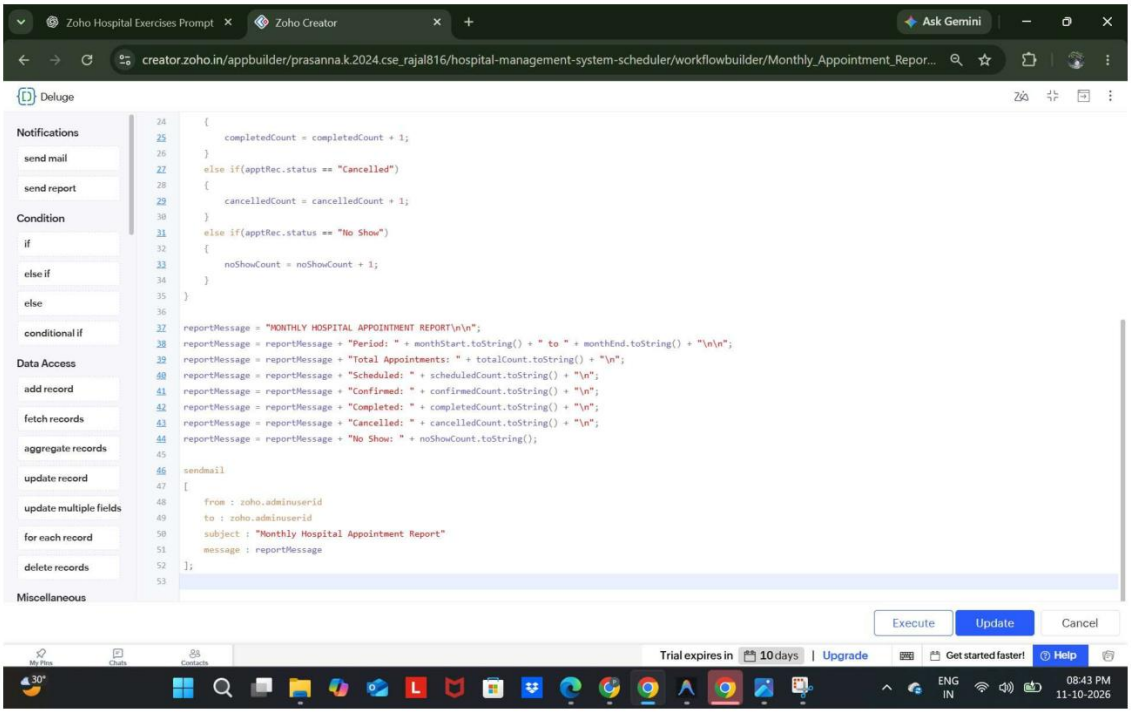

Figure 28

Formatting the Monthly Report

The status totals are formatted into a report message that can be emailed to the administrator account.

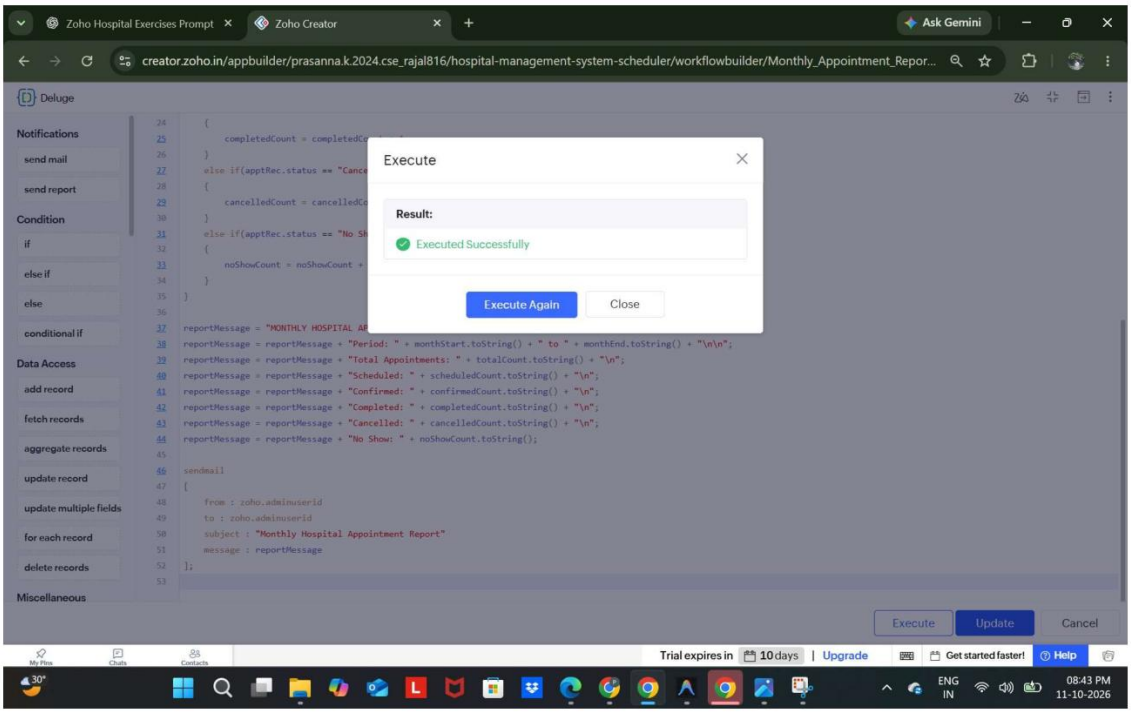

Figure 29

Testing the Monthly Report Script

The Execute option is used to test the monthly report script. The source practical shows a successful execution dialog.

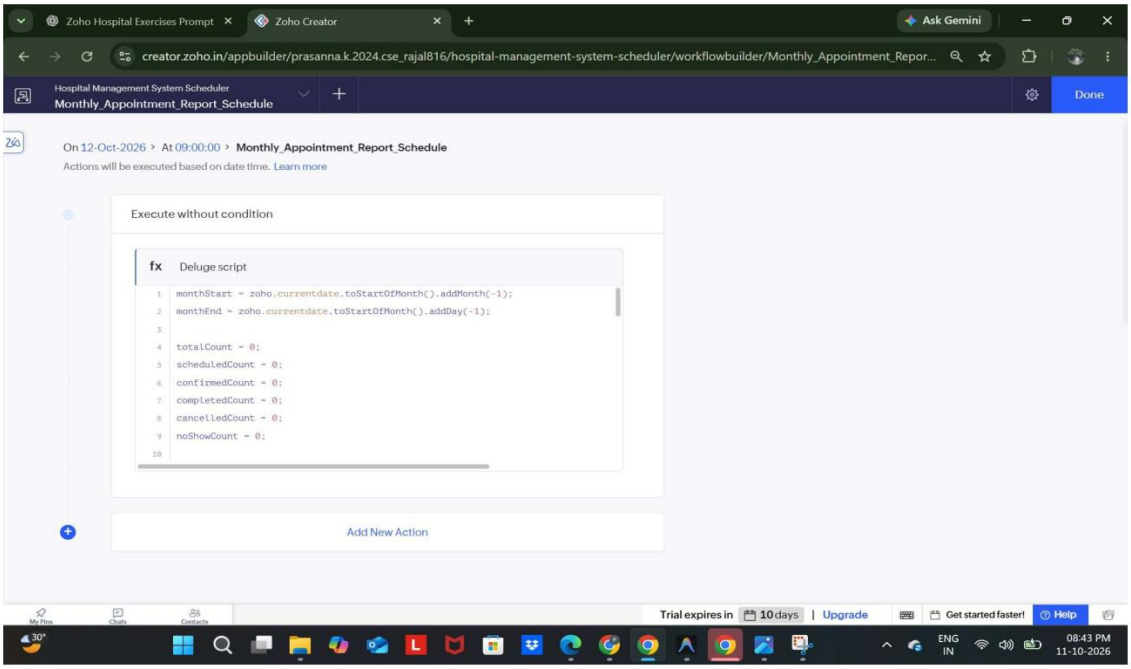

Figure 30

Reviewing All Scheduled Workflows

The final Schedules list shows the daily reminder, weekly summary and monthly report workflows with enabled status.

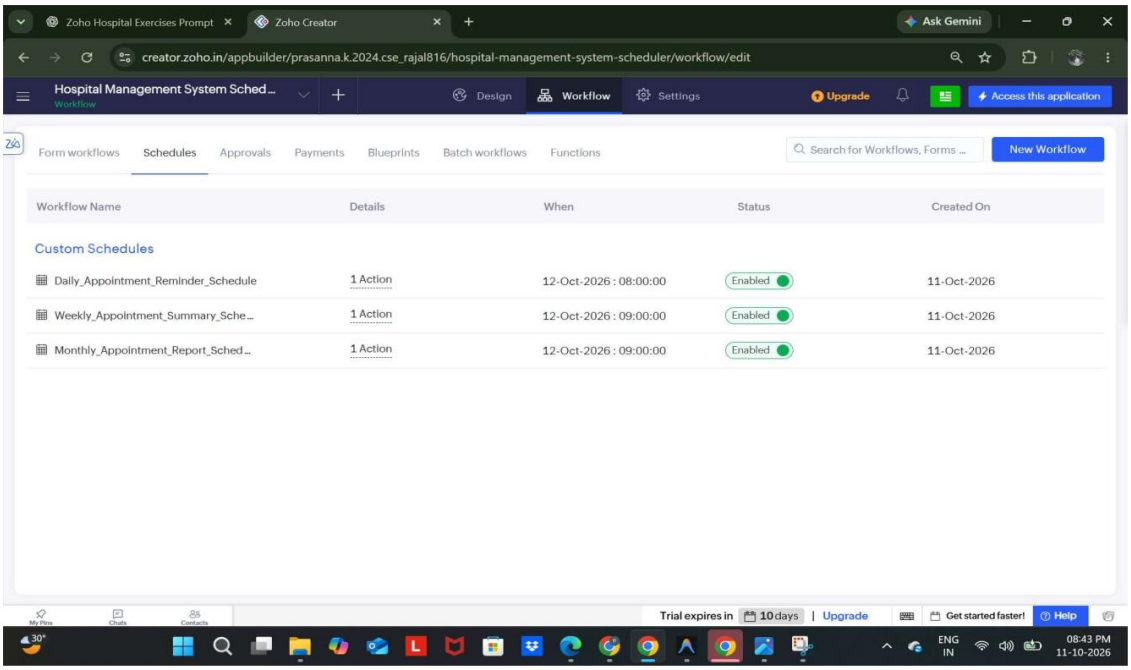

Figure 31

Result

The daily appointment reminder, weekly appointment summary and monthly appointment report workflows were configured in Zoho Creator. The source screenshots show successful script test executions and the final Schedules list with all three workflows enabled.
