LAB EXERCISE 11

CONFIGURING PATIENT PORTAL ACCESS USING ZOHO CREATOR

Aim

To create and configure a Portal User Management system in Zoho Creator for the Hospital Management System, allowing patients to access the portal through email invitations and password setup with the appropriate permission profile.

Procedure

1. Launch Zoho Creator and open the Hospital Management System application.
2. Select Portal and begin creating a portal using the required application and template.
3. Set up the Sign In, Sign Up, Create Password and Reset Password pages.
4. Use the Portal Users area to add a user with an email address and name, and select Patient as the permission.
5. Choose the notification email option so the portal invitation is sent to the user.
6. Use the Create New Password link in the invitation to complete the account setup.
7. Review the Patient Registration form and the information it stores.

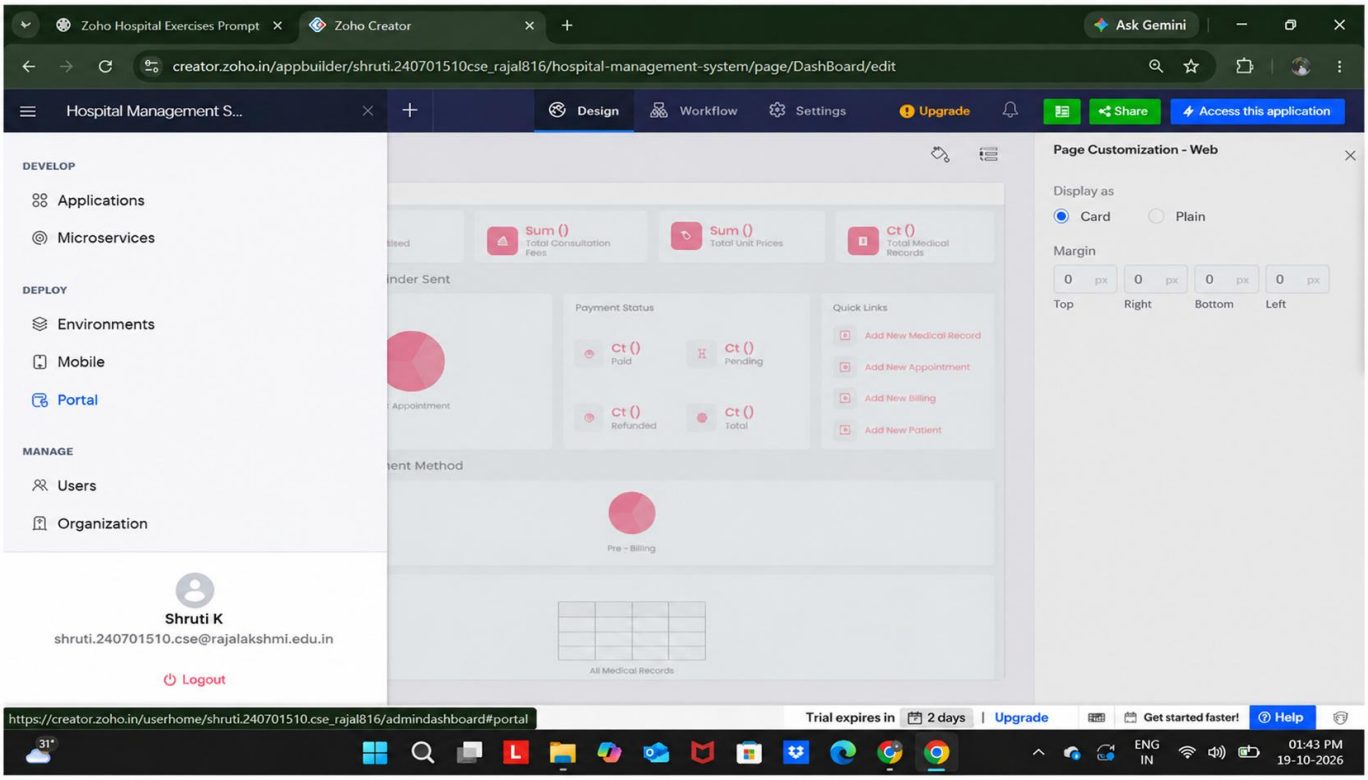

Figure 1

1. Portal Creation in Zoho Creator

Start in the Hospital Management System application and open the Portal option. Create a portal to provide patients with a web-based way to reach hospital services. Select the relevant application and choose a portal template as part of the setup.

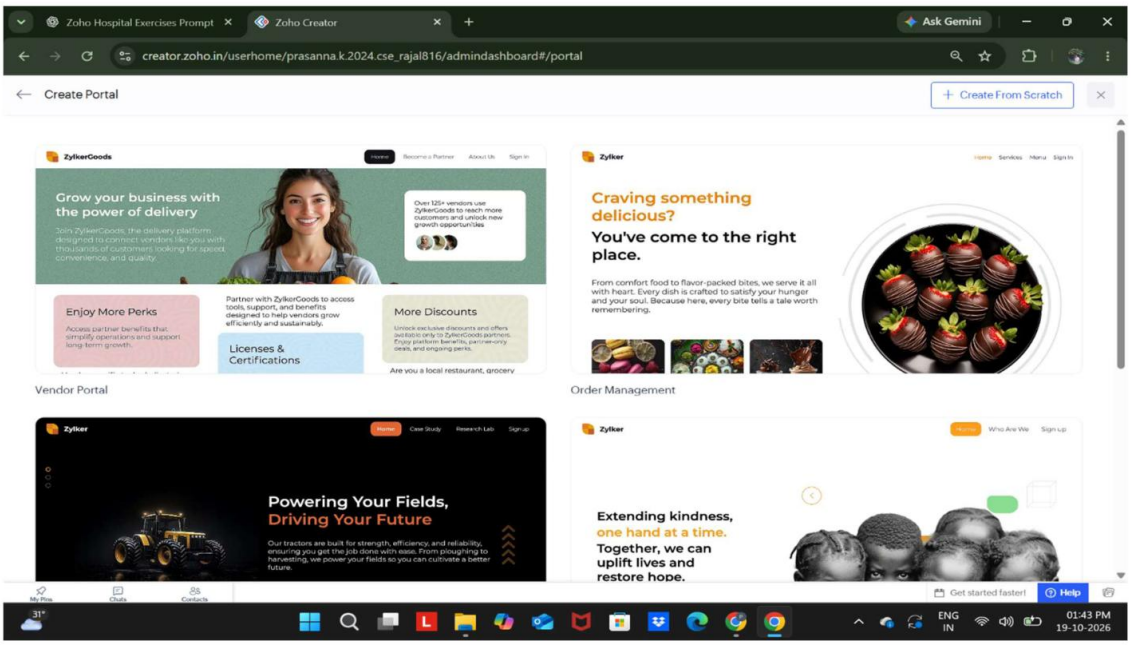

Figure 3

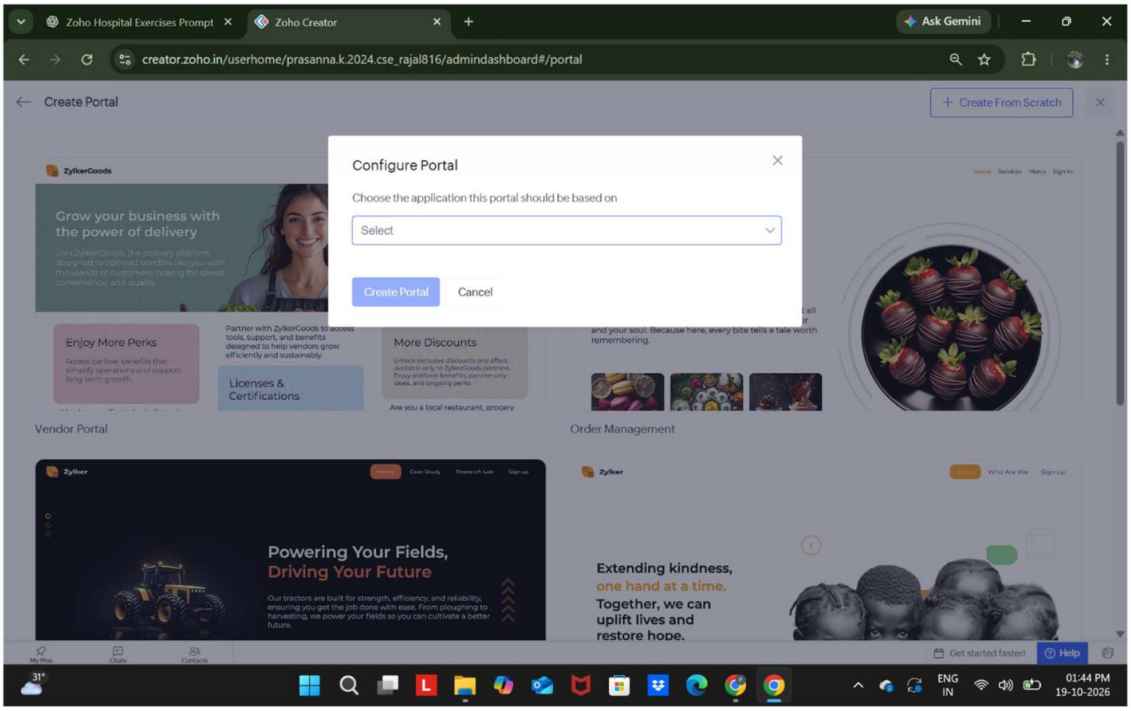

Figure 4

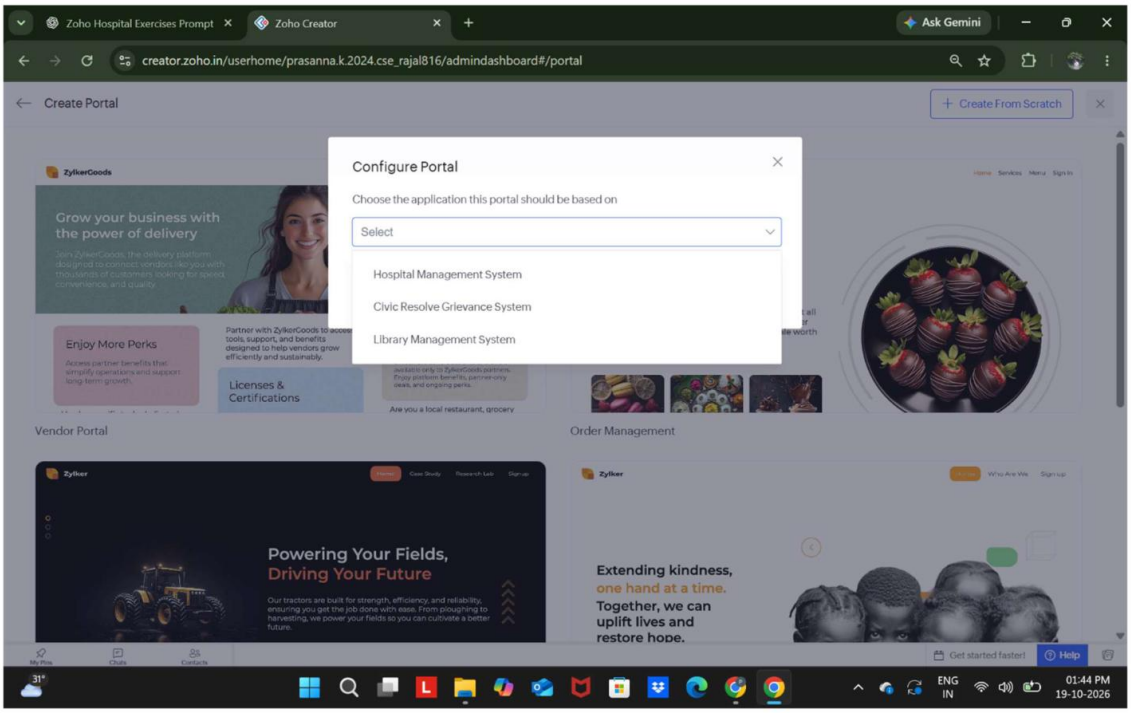

Figure 5

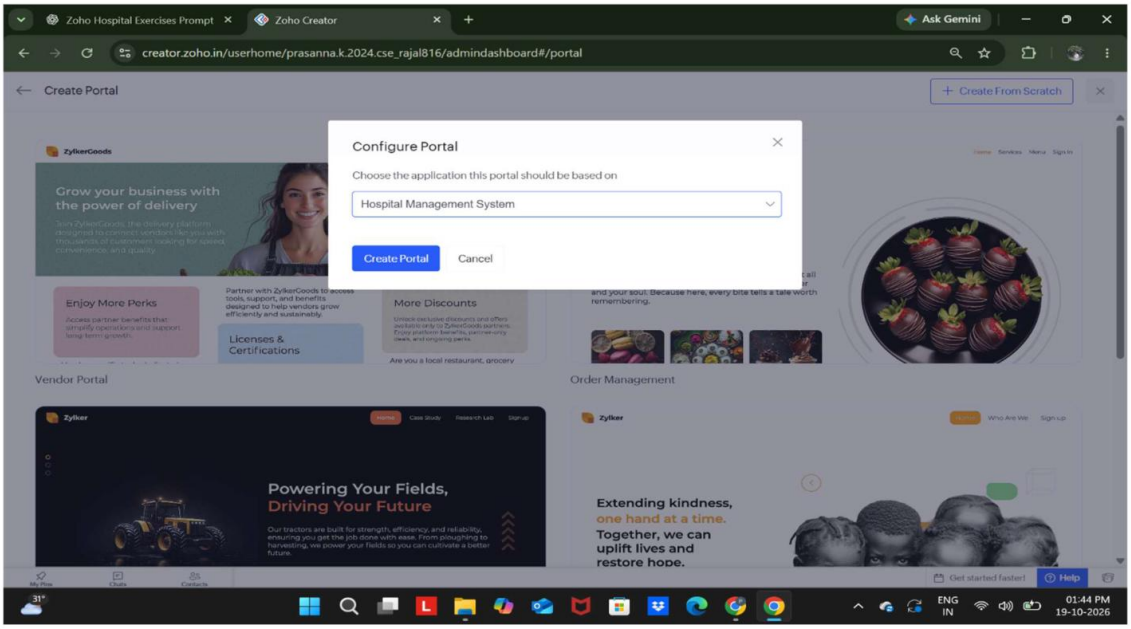

Figure 6

The initial dashboard leads to the portal workspace. From there, the portal creation flow displays available templates and prompts the administrator to select Hospital Management System as the application.

3. Authentication Pages and Password Controls

Configure the pages that handle portal access. New users can register from Sign Up by entering their name, email and captcha. Existing users begin from Sign In with their email address. Create Password is used to establish credentials, and Reset Password provides a route to start account recovery.

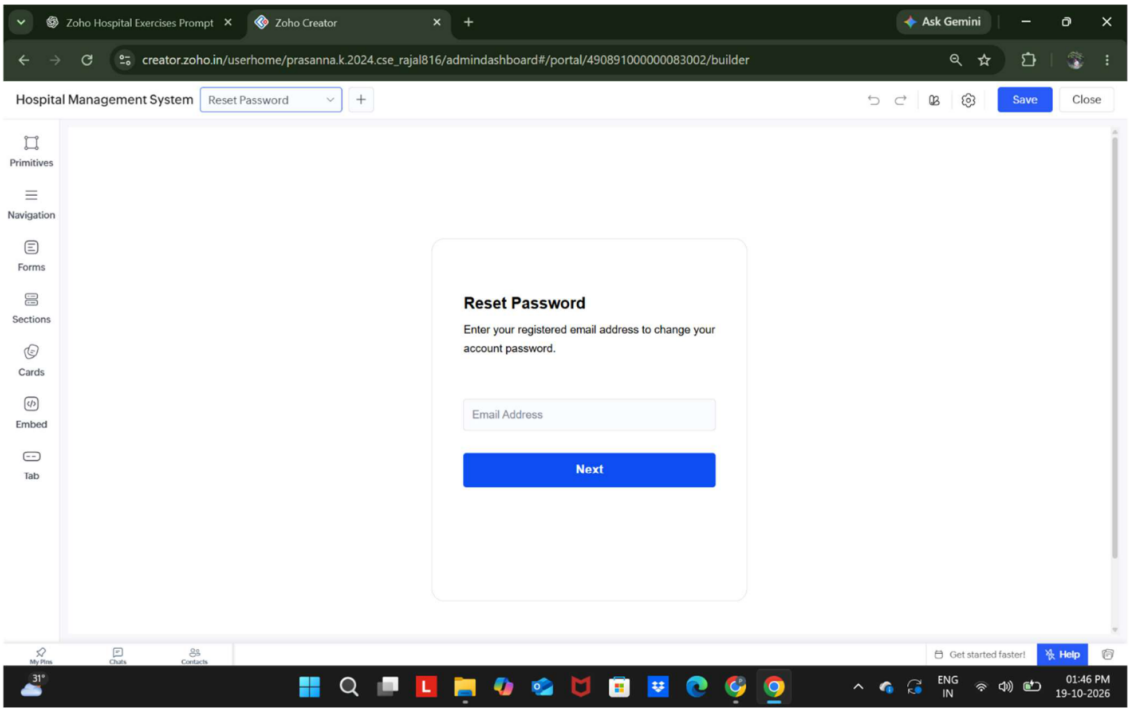

Figure 9

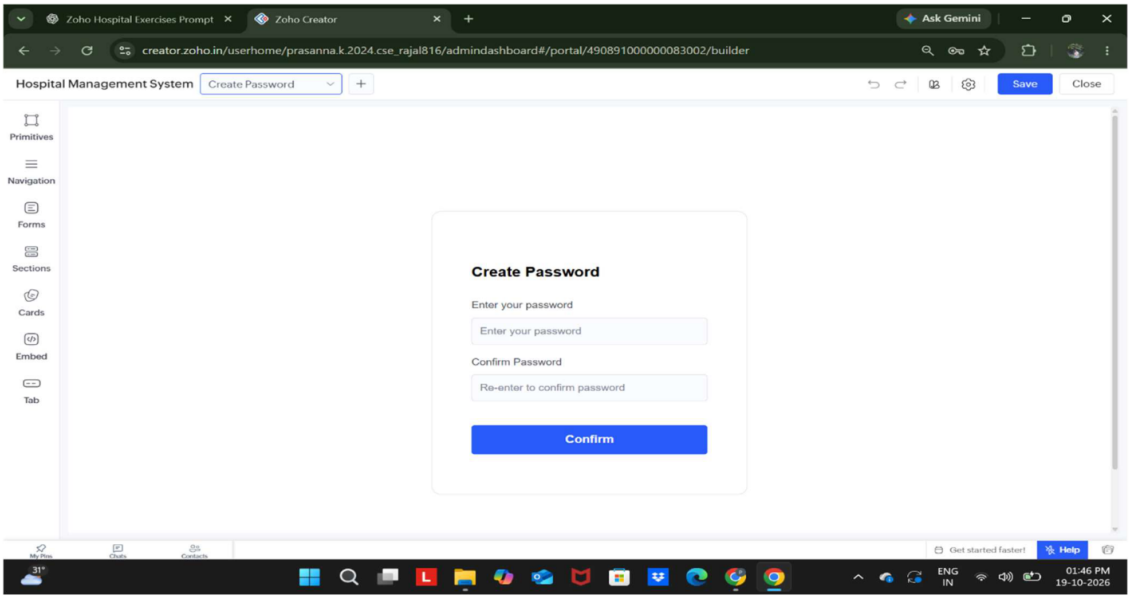

Figure 10

The portal builder contains individual page layouts for sign-in, sign-up, password reset and password creation. Each page is designed for a distinct stage of account authentication.

2. Portal User Setup and Role Assignment

Use the Portal Users page to add a patient account. Enter the user's email and display name, then assign the Patient permission profile. The administrator may enable the notification email setting so the user receives an invitation to join the portal.

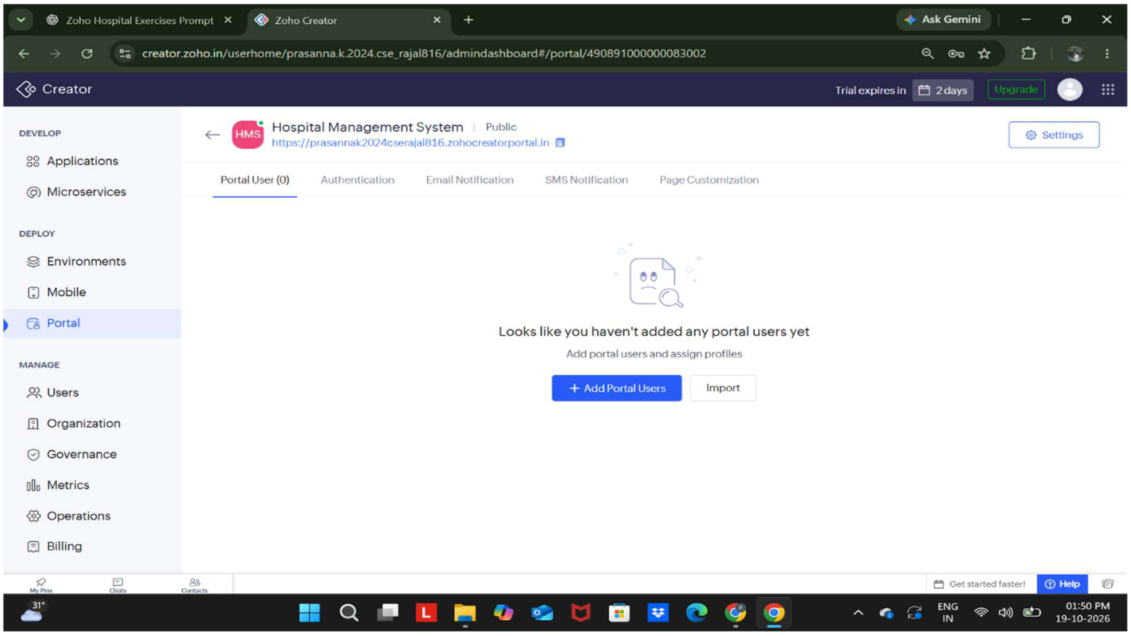

Figure 11

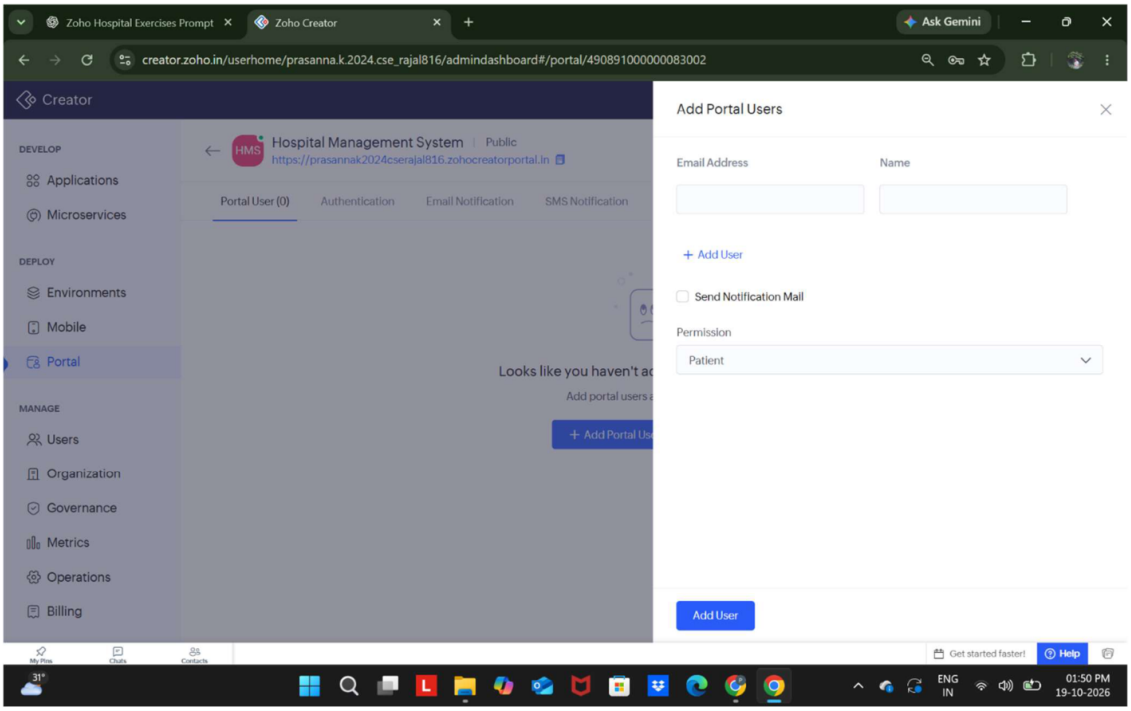

Figure 12

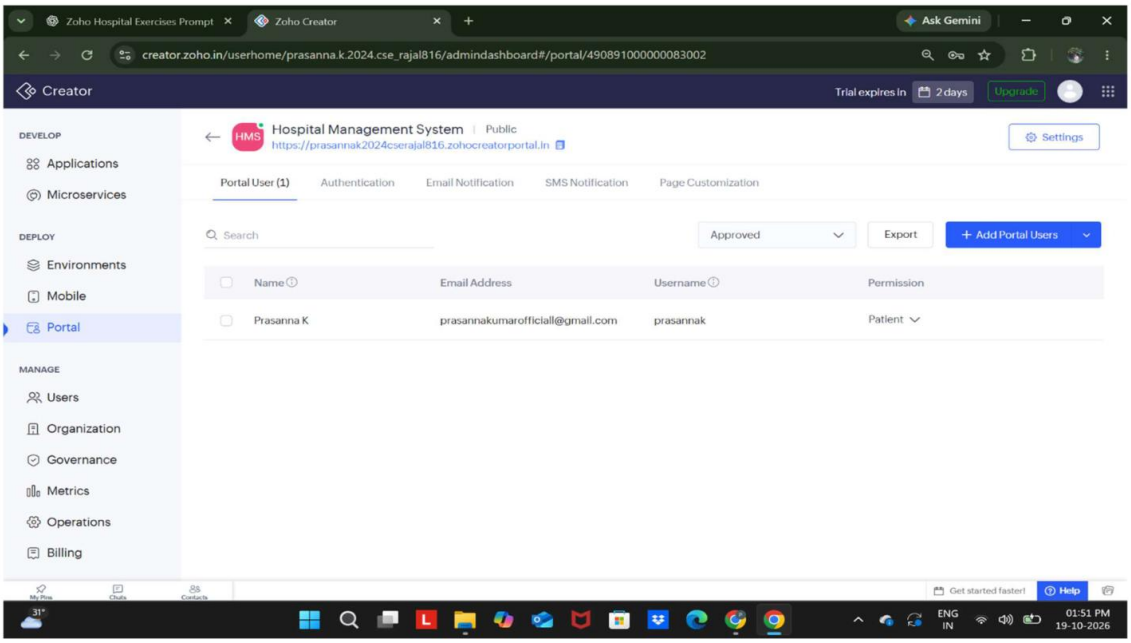

Figure 14

The user-entry panel includes fields for email address and name, an Add User control, a notification email checkbox and a permission selector. The selected role determines the access profile applied to the account.

4. Invitation Flow and Patient Details Form

Once the portal account has been added, the user receives an invitation email. The Create New Password link opens the password setup page, where the user enters the same password in both fields and confirms. Patient details can then be recorded in the Patient Registration form, including demographic, contact and registration information.

The portal user listing shows the account and its assigned Patient role. The invitation email and password setup screens illustrate account activation. The final form captures patient details and supports submission of a patient record.

Result

The Portal User Management system was configured in Zoho Creator for the Hospital Management System. A portal was created, a patient user was invited by email, and the password creation process was completed. The Patient permission profile was assigned, providing portal access according to the configured role.
