LAB EXERCISE 12

CONFIGURING APPOINTMENT APPROVALS IN ZOHO CREATOR

Objective

To configure an approval workflow for the Appointment form in Zoho Creator. New appointment records are routed to an authorized approver, who can approve or reject them, with email notifications sent to the submitter.

Procedure

1. Launch the Hospital Management System application in Zoho Creator and open Workflow > Approvals.
2. Create an approval process that is triggered when a record is added to the Appointment form.
3. Set the workflow name to Appointment_Approval_Process and choose Always as the execution condition.
4. Add an approver to the workflow so submitted appointments can be reviewed.
5. Select Role as the approver type and choose CEO from the role list.
6. Set the decision options to Approve and Reject and save the approver details.
7. Inspect both decision paths and include an email notification action for the person who submitted the appointment.
8. Finish the configuration and check that the workflow status is Enabled.

Approval Workflow Configuration

The workflow applies to the Appointment form whenever a new record is added. The configured approver is the CEO role, and the two decision paths are Approve and Reject. Email actions are included on both branches to notify the submitter of the decision.

1. Opening the Approvals Module

The Approvals area is the starting point for creating a record approval process. It provides the controls needed to add and manage approval workflows for application forms.

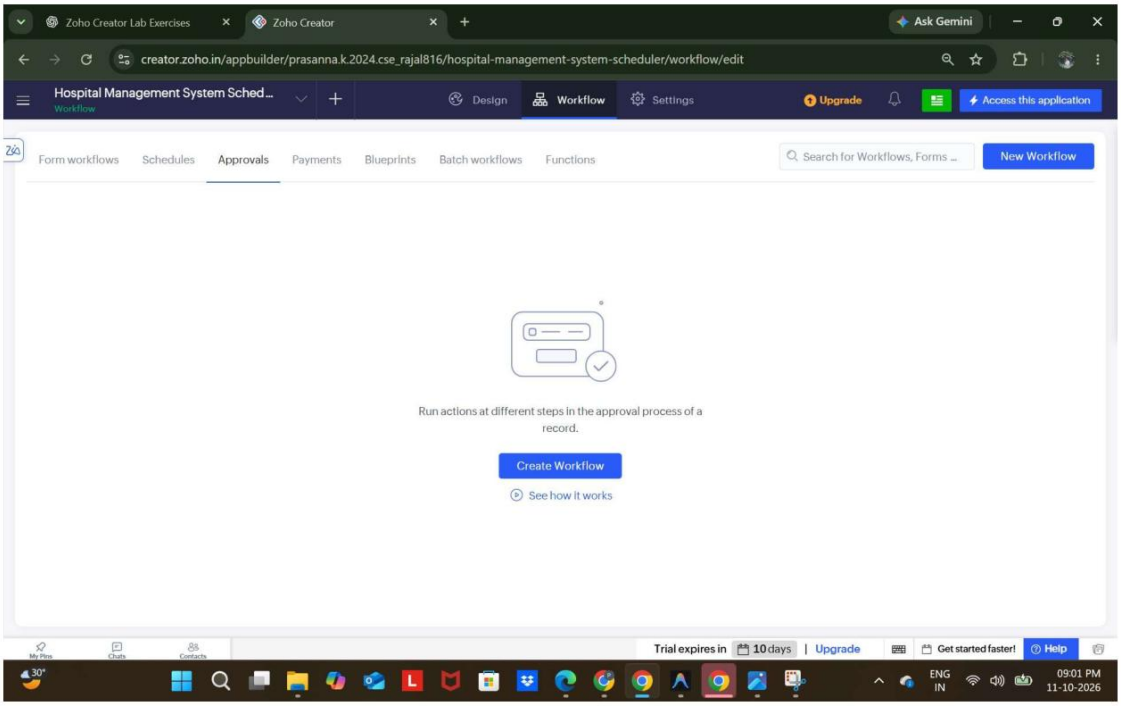

Figure 1

2. Starting the Approval Workflow

The setup page is used to select the form, enter the workflow name and decide when the approval process should run. The Always option applies the workflow to each new record.

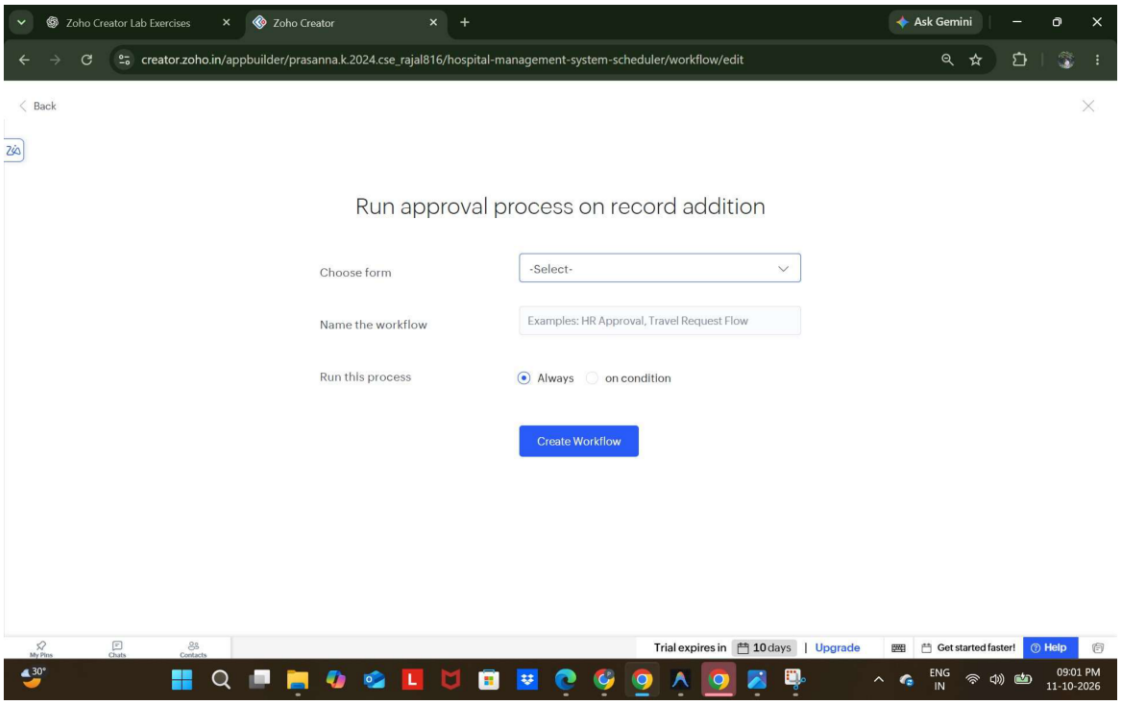

Figure 2

3. Selecting the Appointment Form

Appointment is selected as the target form and the workflow is named Appointment_Approval_Process. The Always setting ensures that every newly added appointment is sent into the approval process.

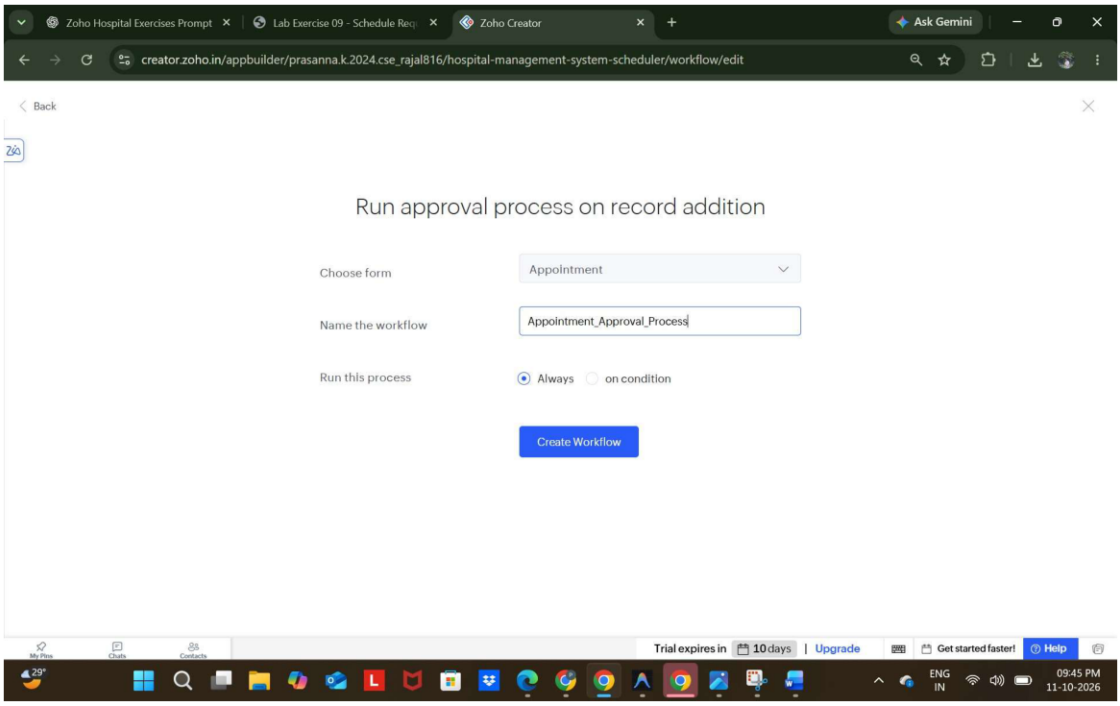

Figure 3

4. Adding an Approver

After the workflow is created, an approver is added to review the appointment records. This step establishes who is responsible for making the approval decision.

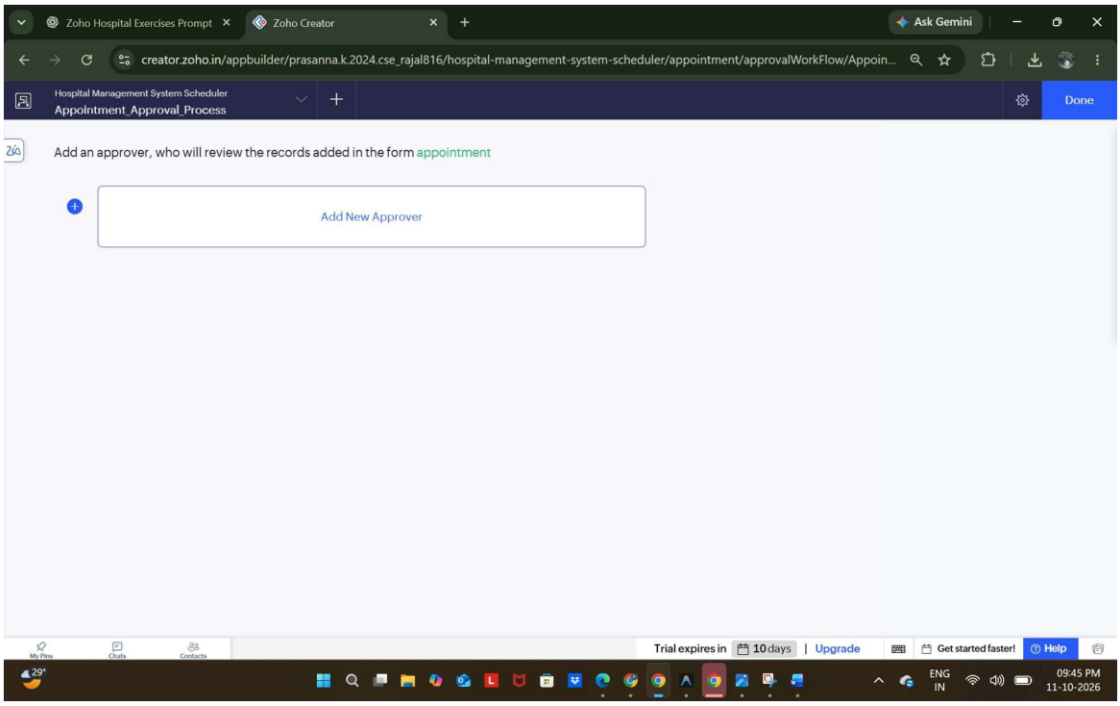

Figure 4

5. Choosing the Approver Type

The approver configuration panel provides options for defining the approver. The decision labels are set to Approve and Reject, and the final setup uses a role-based approver.

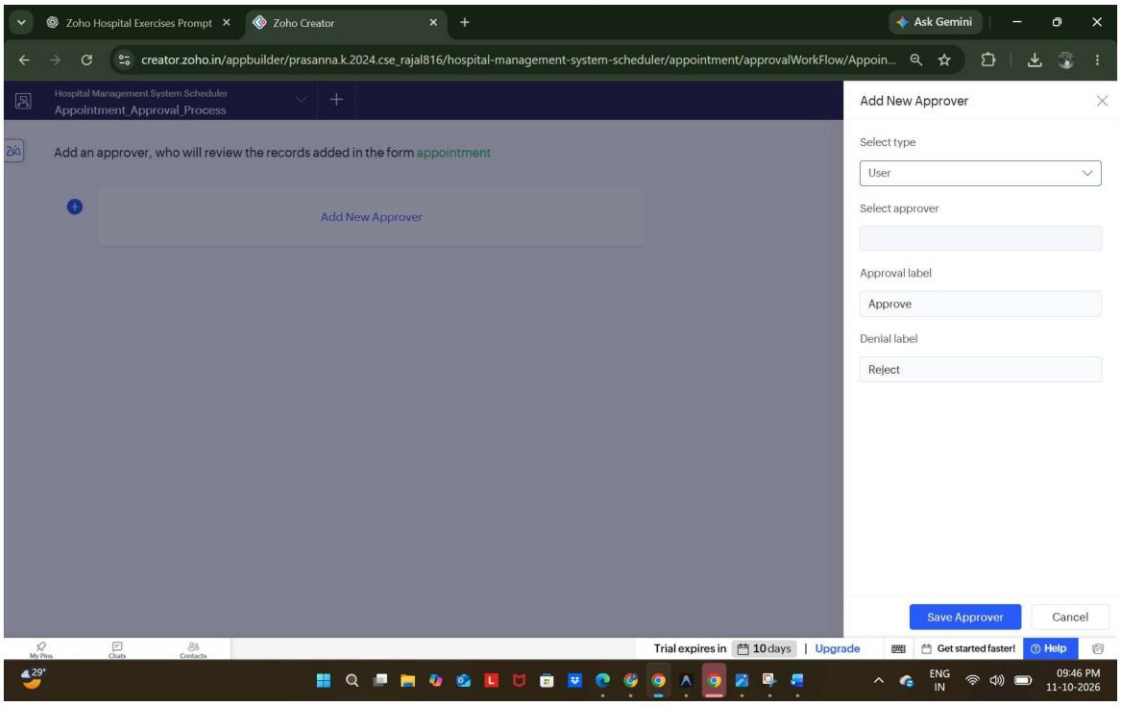

Figure 5

6. Selecting a Role-Based Approver

The approver type is set to Role and CEO is selected. The Approve and Reject labels remain as the two available decisions for the appointment request.

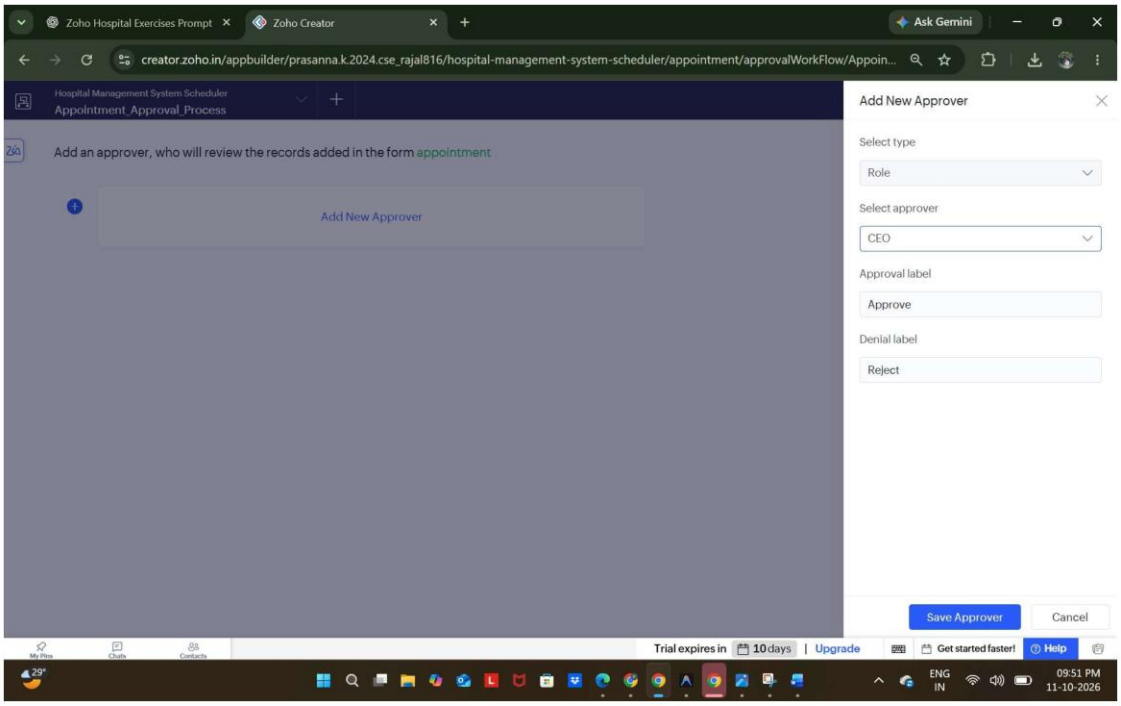

Figure 6

7. Reviewing the Approval Branches

The workflow canvas displays CEO as the Level 1 approver. Separate branches are shown for approval and rejection, allowing actions to be configured for each outcome.

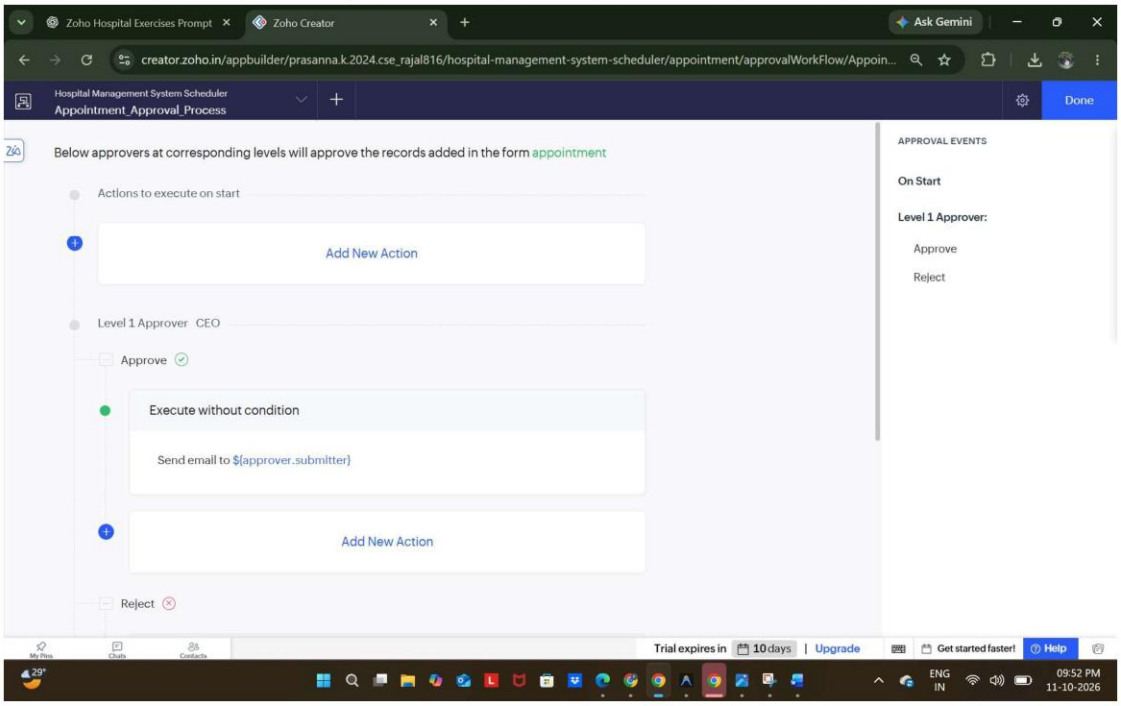

Figure 7

8. Reviewing the Decision Actions

Both decision branches contain email actions directed to the submitter. The workflow can also be extended with further actions or additional approvers if required.

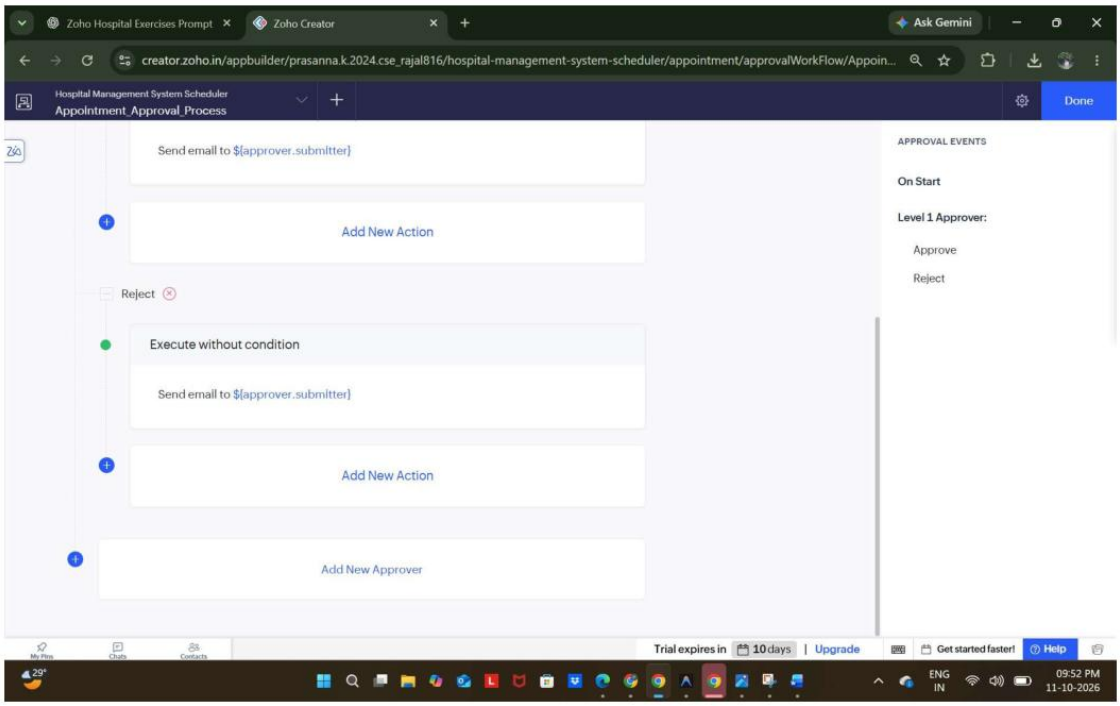

Figure 8

9. Verifying the Created Workflow

The Approvals list shows Appointment_Approval_Process associated with the Appointment form. Its status is Enabled and the list indicates two configured actions.

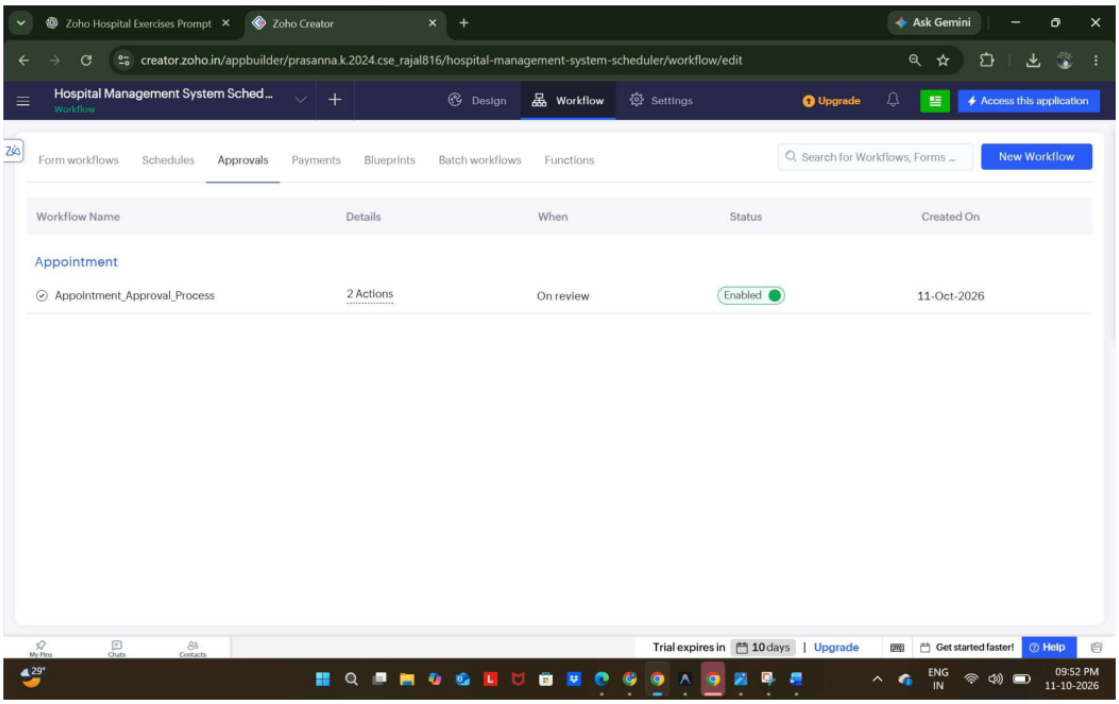

Figure 9

Result

The Appointment_Approval_Process workflow was configured in Zoho Creator. The Appointment form uses the CEO role as its approver, with Approve and Reject decision branches and email actions for the submitter. The workflow is shown as Enabled in the Approvals list.
