LAB EXERCISE 5

DASHBOARD DESIGN USING SUMMARY PANELS, CHARTS AND REPORTS

Aim

To build a visual dashboard for the Hospital Management System in Zoho Creator and learn how panels, graphical components and an appointment report can be combined to present application data.

Procedure

Launch the hospital application and open its dashboard builder. Add and format panels for the required numerical indicators, then inspect the available chart styles and choose appropriate visualisations. Include charts based on room information and configure a Report component to use the All Appointments report. Save the layout and examine the final dashboard.

Setting Up the Dashboard Panels

Panels are used to highlight selected numerical values and their descriptions. The editor provides formatting choices for how each value and label appears, allowing the dashboard to show essential information in a clear and compact arrangement.

Selecting the Chart Type

Zoho Creator provides several chart layouts for presenting data. The options shown include a standard Column chart, a Stacked Column chart and a Stacked Percentage Column chart. A chart style can be selected to suit the information being displayed.

Adding an Appointment Report to the Dashboard

A report can be incorporated into the dashboard by choosing the Report element and linking it to the existing All Appointments view. The configuration supports displaying the report in the dashboard area or providing a button that opens the full report.

Creating Charts from Room Information

The Chart element is used to add graphical views based on the Room records. These chart elements are arranged within the dashboard layout together with the other components.

Viewing Summary and Status Indicators

The finished dashboard displays four key summary panels: Total Amounts, Total Prices, Total Daily Charges and Total Appointments. Appointment status totals are shown separately for Booked, Completed, Confirmed and Cancelled. Room-related charts complete the visual summary.

Viewing the all appointments Report

The all appointments report forms the detailed table section of the dashboard. It provides the individual appointment entries and their associated patient, doctor, department, date, time, reason and statusfields.

Result

A dashboard for the Hospital Management System was assembled in Zoho Creator. It combines numerical summary panels, appointment status information, charts based on room data and a detailed All Appointments report to provide a consolidated view.
