Vehicle Service Request Form

Basic Fields — Step-by-Step Zoho Creator Report

Assignment 10 • Vehicle Service & Repair Request Management

Name	Shruti K
Roll No.	240701510
Application	Vehicle Service and Repair Request Management
Form	service_Request_form
Report	service_Request_form Report
Platform	Zoho Creator

This report documents the implementation of the Vehicle Service Request application in Zoho Creator. The procedure and organization follow the sample lab-record format, while the output section uses the actual Zoho Creator screens supplied for this application.

1. Aim

To design and implement a Vehicle Service and Repair Request Management application using Zoho Creator by creating a service request form with Basic Fields and a report for storing and viewing submitted vehicle service requests.

Problem Statement

Vehicle owners need a simple way to submit service and repair requests before visiting a service centre. The application collects owner details, contact information, vehicle information, issue details and service preferences in a structured form. The submitted information is then displayed in a report for the service centre.

Application Details

Application	vehicle service and repair request management
Form	service_Request_form
Report	service_Request_form Report
Primary User	Vehicle owner / Service-centre staff
Purpose	Record and manage vehicle service requests

2. Procedure

Step-by-step procedure followed in Zoho Creator

1. Open Zoho Creator and create/open the application named **vehicle service and repair request management**.

2. Create a new form and name it **service_Request_form**.

3. Add the required Basic Fields for owner, contact, vehicle and service-request information.

4. Configure the fields according to their appropriate data type such as Name, Address, Phone, Number, Drop Down, Radio, Multi Select and Checkbox.

5. Set mandatory fields wherever required for a valid service request.

6. Arrange the fields so that the user can enter owner details, contact details, vehicle details and the reported issue.

7. Save the form and open the form view to verify that the fields are displayed correctly.

8. Create a report based on the form and name it **service_Request_form Report**.

9. Submit a sample vehicle service request through the form.

10. Open the report and verify that the submitted values are displayed as a record.

Fields visible in the submitted output

Field shown in Zoho Creator	Purpose / Example
owner_name	Vehicle owner name
Address	Owner / pickup address
contact number	Mobile contact number
vehicle registration	Vehicle registration number
issue description	Description of the vehicle problem
Odometer_reading	Current odometer reading
vehicle_type	Vehicle category, e.g. 2 wheeler

3. Basic Fields Used

The form is designed around the Basic Field types required for the vehicle service request. The names below reflect the vehicle-service problem and the fields visible in the supplied Zoho Creator screen.

Basic Field Type	Field / Purpose
Name	owner_name — vehicle owner
Email	Email address for service communication
Address	Owner / pickup address
Phone	contact number
Single Line	vehicle registration
Multi Line	issue description
Number	Odometer_reading
Date	Preferred service date
Time	Preferred drop-off time
Drop Down	vehicle_type
Radio	service type
Multi Select	additional services requested
Checkbox	service authorization

The actual screenshot supplied shows owner_name, Address, contact number, vehicle registration, issue description, Odometer_reading and vehicle_type in the current form view.

4. Output — Vehicle Service Request Form

The following is the actual Zoho Creator form screen supplied for the project. It shows the service request form with the owner, address, contact, vehicle, issue and odometer fields.

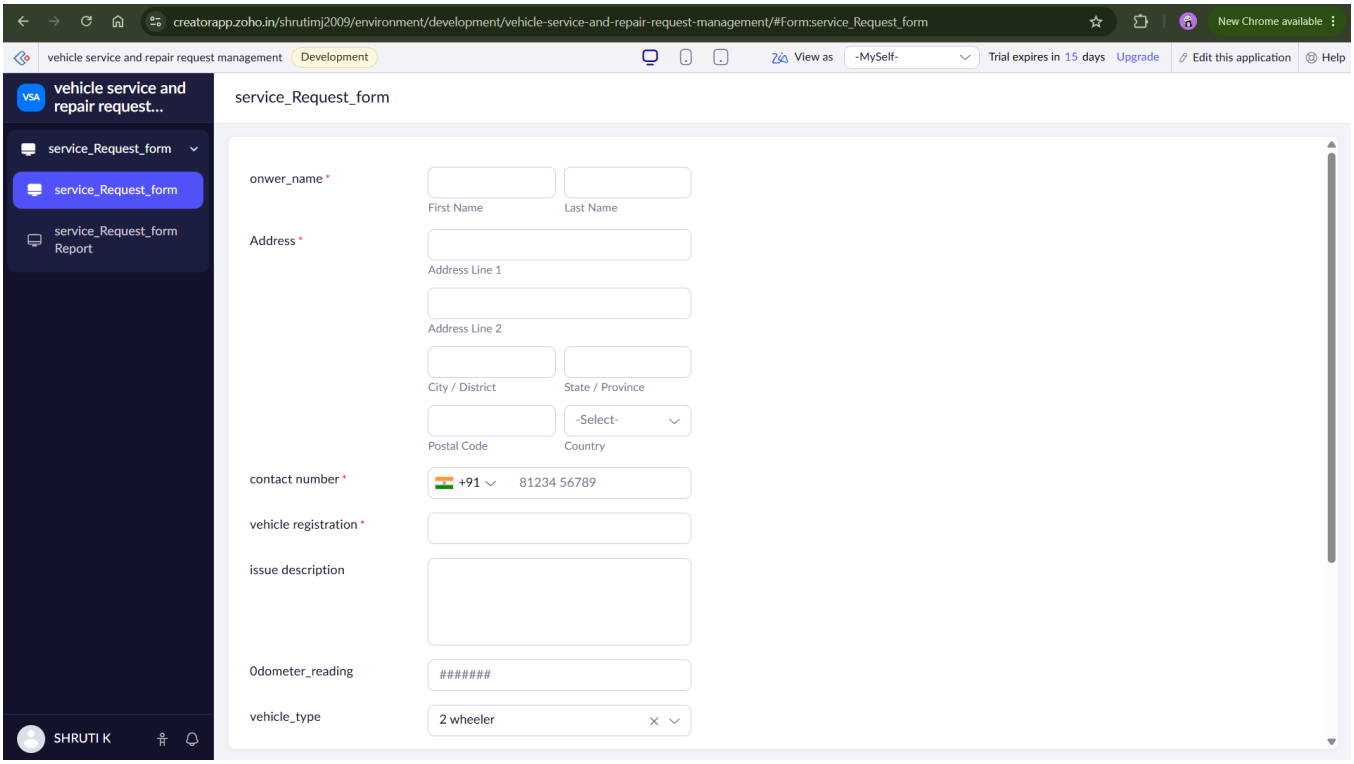

Figure 1 — Actual Zoho Creator output: service_Request_form.

Observed output

The form contains the owner_name field, address fields, contact number with +91 country code, vehicle registration, issue description, Odometer_reading and vehicle_type. The form is displayed inside the Zoho Creator application named vehicle service and repair request management.

5. Output — Service Request Report

After submitting a service request, the entered data is stored and displayed in the report view.

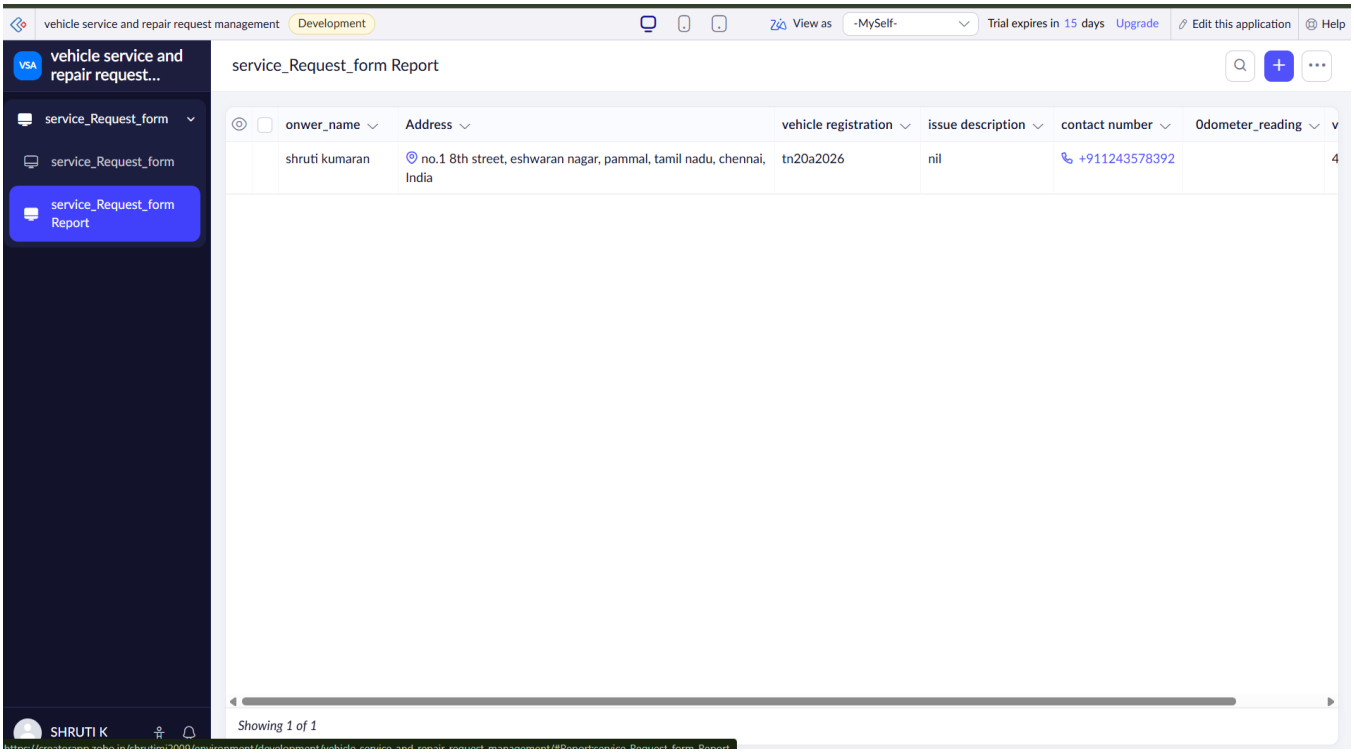

Figure 2 — Actual Zoho Creator output: service_Request_form Report.

Observed record

The report currently displays one submitted record. The visible row contains the owner name, address, vehicle registration, issue description, contact number and odometer information. The bottom of the report shows **Showing 1 of 1**, confirming that one record is currently available.

6. Validation and Testing

The following checks can be performed on the service request form:

Test	Expected result
Owner name left empty	Form should require the owner name if marked mandatory.
Invalid / incomplete contact number	Phone validation should reject invalid input when configured.
Vehicle registration left empty	Required-field validation should prevent incomplete submission if mandatory.
Odometer input	Number field should accept numeric odometer values.
Vehicle type selection	A valid vehicle type should be selected from the configured choices.
Issue description	The user should be able to enter the reported problem.
Successful submission	A new record should appear in the service request report.

Note: The screenshots supplied show the current working form and one submitted report record. The report should be populated with additional sample records if the laboratory question requires more than one.

7. Result

The Vehicle Service and Repair Request Management application was created successfully in Zoho Creator. The service request form accepts vehicle-owner and vehicle-service information, and the submitted information is displayed in the service request report.

8. Conclusion

Thus, a basic Vehicle Service and Repair Request Management system was implemented using Zoho Creator. The application demonstrates form creation, Basic Field usage, data entry, submission and report generation.

9. Final Output Summary

Component	Output
Application	vehicle service and repair request management
Form	service_Request_form
Report	service_Request_form Report
Current submitted records	1 record visible in the supplied report screenshot
